Not only that, but it only SEEMS to him, and he only THINKS that
what he says might be. He provides NO references to what he speaks.

Also, I find that folks who use Microsoft $ucks to refer to them,
are usually just jealous and couldn't write a program to print
"HELLO WORLD" if their lives depended on it. LOL

Bill

But you do *not* need a TRS-80 Model 16... to run TRS-DOS...

I'm posting from <a.f.c.>, and we do *not* always provide
references. ;-) (What is "Santa Cruiz" gonna bring you for
Christmas???)

I am *not* jealous of Mi$uck, mostly just resentful of their poor
OS products and their unfair business practices.

You did when it was the 16-bit version.

There was a version of TRS-DOS that ran on the 68000. I can't remember if
it was the plan all along, or if they had to scramble because Xenix was
late.

Actually, I was _assuming_ it ran on the Z80. I'm not sure.

I remember SuperCalc and Adventure, and some sort of BASIC and ELIZA
and a word processor. And there was a version of CP/M, but I never did
anything with it; I'm not sure if we had any apps.

Hello all,
  I have been having fun clowning around with my homebrew Z80 SBC (1),
and am at a point
where I can start considering storage options.

Quick specs:
 Zilog Z80B @ 6 MHz
 2 x 32 KB SRAM (full 64 KB contiguous available after h/w init)
 512 KB FLASH EEPROM - 32 KB mapped to 0000 - 8000h at boot
 Zilog Z85C30 SCC - uses system clock for BRG ; 8N1 @ 19.2 Kb/s

 I've poked through the archives a (very little) bit for info on (E/EP)
ROM filesystems,
found some stuff by Allison, Falconer, and others. The bag-and-tag
(NS*DOS-alike)
method seems like a good candidate, but then I got to thinking....

 I have an Atari 1050 drive sitting idle. It uses a TTL-level serial
packet
protocol, TOTALLY h/w compatible with the SCC (just use CTS or DTR
for /COMMAND).
It offers 130 KB of storage, 260 if I make a 'flippy'.

 So...I have some questions:

Has something like this been done before? I have read a little on the
1060,
which was an Atari prototype peripheral that was analogous to the
Apple II CP/M

'Z-80 Softcard' (2) ; I also know of (but haven't absorbed the
details) the Indus GT
having CP/M capability through it's own Z80. But has anyone ever (mis)
used
the 1050 drive, sans Atari computer, with CP/M ???

How can I bootstrap a CP/M system? (This applies to the FLASH disk as
well...)
Reading through DRI docs, ISTM there is a stage where you couple your
CBIOS
with an existing FDOS, and then write the resultant FDOS to a floppy,
and then
that floppy becomes your system 'master' for the target. How does one
bootstrap
CP/M for a 'totally alien' disk format- whether FLASH or something
like the 1050?
And are there any rigorous, hadn-holding treatments of CP/M
bootstrapping, DRI
docs aside (I have a Kaypro II manual that is just all of the DRI
stuff inside-
User Guide, System Regeneration Guide, ED/ASM/DDT Guides)
Would a C128 w/ Juggl'er or Apple][+ Softcard help?

P.S.:
 (1) In poking through past posts, I came upon a bit by Glenn
Herrmannsfledt
about his homebrew SBC - mine turned out an awful lot like what he
describes!!
(2) I actually have a Taiwanese Softcard clone, which works with my
Laser 128!

Thoughts and comments, please!!

Thanks,
  Tarkin

Well, he did say it was a prototype.

Hence, it could have been on wire-wrapped circuit boards. And it could
just be in two pieces with a lot of other computer junk cluttering
both bedrooms.

> the 1050 drive, sans Atari computer, with CP/M ???
>

First some facts: my first computer was an 800XL + 1050.
then some "links" for those not quite sure what it is:
search Google, or whatever, for keywords like:
     "SIO2PC" or "sioinstr.txt"
to get a list of pages there points to Nick Kennedy's page...
(for a discussion of the other way around)

This come direct from memory so i could be wrong in more than
one place:
As i remember the Atari protocol was at 2400 baud so it will not
be that very fast. There was some kind of copy-protection in
the 1050's ROM not allowing You to "see" the complete FS,
remember i did buy an "Disk-Doubler", as fare as i can tell it is
a sandwich of 2x6810's + an 2732, with that one was able to
run an disk-editor on the FS, (data on an PC-floppy was inverse).
(and the 1050 don't care about the index-hole)

So from that I'm not even sure this will work with an unmodified 1050...?

> How can I bootstrap a CP/M system? (This applies to the FLASH disk as

> CP/M for a 'totally alien' disk format- whether FLASH or something
> like the 1050?

Here I'm sure You will get something much better, but my 2cent:

In Boot-Prom make an Start-Menu,
Read 128 byte from Boot-device at track 0, sector 1, place it at
0000h...00080h, transfer control to that, (Jp 0 or RST 0),
those 128 byte should load from track 0, sector 2... track x, sector x the
OS or an extended Boot-loader to load the OS and put it at the right
place in memory,... transfer control to Init in the Bios,
and You are up-and-running...

Good luck...!
<ole>

No, it's not that bad. The Atari drivers were pretty fast at their time,
the transfer speed is 19200 baud.

> There was some kind of copy-protection in
> the 1050's ROM not allowing You to "see" the complete FS,

You do see the complete data bytes, it's not a copy protection, but
rather an abstraction around the disk transfer protocol. You just send
the 1050 the sector you want to read, and get the data back. Not more,
i.e. you cannot see implementation details like sector headers. Thus,
you do have full access to the payload data, all what is needed to put
data on the disk whatever you like. Sector headers etc. are not "file
system" specific, but hardware specific - and not required to store data
or a filing system on the disk.

> remember i did buy an "Disk-Doubler", as fare as i can tell it is
> a sandwich of 2x6810's + an 2732, with that one was able to
> run an disk-editor on the FS, (data on an PC-floppy was inverse).

You can then edit details like the track layout etc, but that is
typically not required unless you want to copy copy-protected disks that
played tricks with those.

> So from that I'm not even sure this will work with an unmodified 1050...?

Why not? Of course, you would need to tell CP/M *how* to access the
drive; it is a custom, Atari specific protocol with a rather small
sector size of 128 bytes (typical sizes would be rather 512 bytes). I'm
not a CP/M expert, thus I cannot tell whether *that* is possible, but
fitting the 1050 hardware wise to the system shouldn't be a problem.

So long,
     Thomas

Hi,

I am not 100% sure, but many others took an CBM (Commodore) drive,
because it's like using a high level language (you have not to use
exotic command sequences and you do not have to consider timing etc.
with the commodore floppy drives, because they have an own intelligence.

Example: http://8bit.yarek.pl/interface/zx81.zx1541/index.html

A 1541 drive was used with a ZX81, and for me it seems to be a feasable,
almost easy approach.

Regards
  Peter

I used to sell the Atari 400 and 800. The problem with the 400 was the
keyboard, but it was $200 cheaper than the 800. I can't imagine a
cheaper version of the 400. I bet that is why it didn't sell.

The 400's keyboard was bad. Nearly as bad as the original Commodore
PET (sold them too!).

Reminds me of the Apple III. It existed alright, but was a lousy
system!

Drop it from a foot above the ground to reseat the chips...cmon!

Did that work out? Seems to me that Linix is growing and SCO is
shrinking if it still does anything at all.

Eric

  Gods, the Little Black Brick. It was my first computer. I built one
with three different keyboards that could be used simultaneously
because I didn't like having to shift-etc. to get the graphics
characters. I wish I still had the thing; it was scary to look at.

  Nicko, old, boy, when you wrote "here", which of the three froups
you xposted to did you mean?

  Or were you just not picky that day?

> ...Indeed, all my Atari

> 200 research started when I was investigating why so many software
> companies in Phoenix had fires in 1980.

  As a matter of curiosity, would you happen to know if many of them
were located on/near the then-really-low-rent stretch of Fillmore
Street between 7th Street and 7th Avenue?

  I often wondered if the "Fillmore Firebug" had more to do with
accidental fires than, um, sub rosa urban renewal.

Well no. The Atari being described never made it to market, it was a=20
prototype. Commodore had all kinds of computers that would get press
in "Compute!" and then never be heard from again.

The Apple III may have been a lousy product (or perhaps a lousy=20
implementation of a "better" Apple II) but it actually made it
into production and had some level of penetration into the marketplace.

I had an Apple III for a while, well after it came out, and it just
fell into my lap with some other junk. They weren't common, but they
weren't rare at the time.

    Michael

CPM was designed around 128 byte/sector 8" floppies, other sector sizes
required buffering up multiple logical (128 byte) sectors to write a
single physical sector. The 128 byte sector should not present a problem
to CPM.

I saw some hints of this on Facebook, and just noticed this
article at the top of the front page of AtariAge
(http://www.atariage.com/), which also links to their
forum section, where the topic is being discussed:
http://www.atariage.com/forums/topic/154479-new-gtia-chips/

"Atari Chips Reborn"
December 14, 2009

Curt Vendel of the Atari History Museum and Legacy Engineering has been hard at work reconstructing several proprietary Atari chips, including the GTIA (used in the Atari 8-bit computers and 5200), the MARIA (used in the Atari 7800), and the TIA (from the Atari 2600). There is great potential for creating new Atari machines in a variety of form factors, based on Curt's work. When asked about these new developments, Curt had the following to say:

"Many in the Atari community, myself included, have cobbled together one thing or another to keep our systems alive. A dream for everyone has always been the possibility of perhaps a new Atari 8-bit system. As many know, I have most of what was Atari's mainframe archives, among them are what are called "Tape Outs"--these are 9 track reel to reel tapes that in the 1980s and early 1990s would be sent from a chip design firm--such as Atari's "ASG" (Atari Semiconductor Group) to a place called a "FAB" which is a chip fabricator. The final layered data files are in a streaming binary format called "GDS" and this data instructs the FAB on how to process and create actual IC chips.

I've been spending a great deal of time as of late recovering the data from the tapes, having to massage them to process and create a viable GDS and/or DB file so that the actual chips could be plotted and tested with some software that I use. The effort has been successful for the most part and several of Atari's proprietary chips are coming back to life in simulation. Now we need to see if they can be recreated in a FAB at a reasonable cost. What is the potential of this? Doing the chips in smaller SMT packaging, and potentially bringing back to life some of the later CMOS designs of combo chips which could lead to a SoC - System on a Chip. This is all very early

work, but the future just got a little brighter in terms of preserving
and continuing the legacy of Atari's custom IC chips."

You can read all about Curt's hard work over in our Atari 8-bit
Computers Forum. In addition to technical discussion (which includes
Curt Vendel), you'll find various high-resolution images of the
reconstructed chips.

Enjoy!

While reading about the resurrection of Atari chips by
Curt Vendel & friends, I discovered this, which I'm fairly sure
I had never heard of!

  Video Board XE (VBXE)
  Programmable, FPGA based graphics subsystem for Atari XE computers.
  http://vbxe.atari8.info/

The project is, in fact, a few years old! (Website says "2005-2007")

More at AtariAge (in English):

  http://www.atariage.com/forums/topic/152939-show-your-vbxe-installs/

  http://www.atariage.com/forums/topic/153863-vbxe-programming-examples-programming-queries/

  http://www.atariage.com/forums/topic/154085-mac-65-for-vbxe/

  http://www.atariage.com/forums/topic/142283-vbxe-2/

YouTube has some videos of the thing in action. (Search for "VBXE")

Man, I seriously wish AtariAge's forums showed the date that posts were made. (For every single frickin' post, it shows the date the user signed up, which is pretty uninteresting. Knowing when the post was MADE makes way more sense.)

This is why I've stuck to Usenet-only, for the most part.
But apparently I'm missing out, since I'm not learning about stuff like VBXE until ~2-4 years after the fact. :)

Xref: g2news1.google.com comp.sys.atari.8bit:1589

Man, I keep finding gems this evening!

Someone's screenshot of their VBXE -- see my other post -- was of an 80 column word processor for the Atari that I had never heard of, which

started in 1999 and was most recently released this year (2009).

http://www.atari8.co.uk/lastword/lastword.htm

  "The Last Word is one of the most feature-rich word processors ever
  written for the Atari 8-bit. It includes many of the innovative tools
  found in programs like TextPro and The 1st XLent Word Processor, and
  version 3 of the program sees the introduction of a software driven 80
  column display. LW 3.1 supercedes the previously released 3.0, which
  should be abandoned in favour of the new version.

  The Last Word 3.1 offers:
    * Dual 80 and 40 column displays, switchable at any time
    * Up to 240 column editing in a horizontally scrolling window
    * Editing of up 10 files simultaneously on a expanded memory machines
    * Sophisticated keyboard macro language
    * 80 column print preview
    * Feature-packed file management menu with up to 80 filenames in a
      scrolling window and support for SpartaDOS X directories with
      time/date stamps
    * High speed editing, even at the top of large files
    * Support for SpartaDOS X, MyDOS, DOS 2.5 and many DOS 2 derivatives
    * International characters and customisable printer drivers
    * Comprehensive 75 page manual
    * Large collection of macros, printer drivers and help files

More interestingly to me, as a programmer, was some text from a
document that was shown in the aforementioned screenshot.
It was about the design of The Last Word, and how the text is
managed in memory so that the thing responds quickly, even
with a lot of text.

Man, I've got to try this out! :)

Yep, Bill you must join www.atariage.com.

I use the rss feeds for the different forums.

They really have some good discussions on various topics.

Beetle the guy that built the laptop atari 8 bit is also on the subscriber list

Other news you may have missed is Curt Vendel is hopefully making a
pizza box lid for the atari 1200xl. hard to describe but search for
"1200XL Pizza Box".

1050?

I modify Dunfield's monitor and put it in ROM on my board. I assemble my
CP/M code under SIMH using SLR Z80ASM or the original CP/M assembler.
Then I load the hex files for BDOS/CCP/CBIOS using the monitor and jump
to the CBIOS start address.

It helps at this stage if you have a disk that's already formatted and
filled with E5h (I used IDE drives) as I then transfer (one at a time)
PIP, LOAD etc. using the monitor, and once in CP/M SAVE them to disk.
Writing a simple XMODEM program will also be useful.

If you can connect your disk system to the PC for formatting and
writing, you can construct the filesystem on the PC and write it as an
image. This is what I did with my Z180 SBC which uses flash ROM and NVRAM.

That's a different SCO. It's Caldera that rebadged itself after
acquiring the original SCO's server software and stuff -- the original
SCO continued as Tarentella and eventually sold itself to Sun.

NO, thank goodness it did *not* work out. ISTR that Mi$uck was
upset because IBM was offering Linux on IBM's "blade servers". The
lawsuit was Mi$uck's way of slowing that down...

Hi,

I'm Jonathan Halliday, the author of "The Last Word", and I was
delighted to receive an email from Bill explaining the flukey series
of events which led him to discover the program. That was my
screenshot (a photo of my set-up at home; a VBXE equipped Atari 8).
Anyway, I'm really thrilled to find that the Atari newsgroup is still
going strong and I hope to be a regular visitor and contributor here.
From the topic index, it looks as if there's some good stuff going on.

By the way: if you head over to atari8.co.uk and download the latest
version of the program, you'll find the text document you're talking
about on the distribution disk.

Regards

Jon Halliday

The Lisa made it to market. For a price they would convert it to an
upscale (at the time) Mac. For a while, Lisa was the development system
for Mac. Until the sex change.

That seems like the most backwards thing to do. The 1200XL has the best keyboard
of any Atari... why would you want to cover it up and replace it with an
external one!?!?

I also think, despite how _huge_ it is, that the 1200XL is one of the nicest
looking form-factors of all the 8-bits. (And it never occured to me how much
nicer side-loading carts are, which is I guess why Curt's doing this to the

1200XL, and not any other 8-bit.)

I need to dig up a treasure chest and have Ben Heckendorn construct
a 1200XL laptop for me, with the original keyboard.

I realized I was wrong when I mentioned (in a flaberghasted Facebook
status at 2am last night?) that The Last Word was under development for
10 years. I guess it was "hibernating" for the majority of that. ;)

I spent a little time this mornign skimming the user manual PDF that
comes with the ZIP. You said that that doc was generated in TLW itself?
(aka, "you ate your own dogfood") If so, that's awesome! :)

I noticed a _few_ glitches here and there (font switch for a word or
two, as well as missing inverse characters in some places;
e.g., " ord haracter ine", or somesuch).

I fired it up for all of 30 secs in Atari800 on my Linux laptop.
Sadly, Ctrl+Shift combos don't seem to work for me. But that's
fine, I've got little reason to run an Atari 8-bit word processor,
let alone on an emulator.

However (much as I find my own "Tux Paint" is useful for me when I want
to be artistic, since it's such an up-front UI and somewhat limiting
environment), I started thinking "man, I wish I had something to write".

I've had rare occasion to use a word processor that isn't one of these
modern abominations, like MS Word or OpenOffice. The ones where
writers are SO easily tricked into doing some of the absolute worst
formatting (e.g., hitting [Enter] 20 times to force a page break).
And I'm not brainy enough to want to use LaTeX for anything. ;)

PS - My day job is, in fact, helping authors publish their works as ebooks,
where page-based formatting HAS to be avoided, since screens all differ
and text and reflow, even on the same device (change font/size and/or
screen orientation on the fly!).

I kind of assume the reason we didn't hear much about it is because on

several levels it is a non event. Spectacular on a hacking and technical competance level of course.

Looks like it is slaved to several things Atari and 6502. Saw where one person said the picture he was displaying was 152k. I can forget that a stock disk drive will not be able to store that much data what with sio2pc and all but you still have to move that stuff around. Let's say you have 1 meg of ram you can load with 6 pictures. I make it at ~6 seconds to copy a move a picture to screen ram. Those digital picture frames do a much better job then that. There is also the first load of data problem, 152k at ~19kBAUD sio speed 80 seconds load time per picture. I guess the blitter operation within the CPLD will handle it after you get the data there but it will take a while to do the initial loads.

There's little technical problems I wonder about. He could be using color registers but if not, 3 RGB does not goesinta 8 evenly. You have to do some compromising like 3 red bits, 3 green bits, and 2 blue bits to feed your DAC. Its still light years ahead of a stock Atari but IMHO it would be better with 8 bit bitplanes.

But heck, tried to revive my Tandy 1000TX that had all my source files on hard drive and my Needham PB-10 programmer. I'm kind of a pathetic case: After I finally got the 20 meg MFM hard drive to spin up, it started dripping water from some where internal. Strangely enough, 20 years submerged in a wet basement and the Tandy itself burst to life on first try. I'll have to clean out the mouse poop and termite droppings!

That SBC I was buying http://sbc.rictor.org/sbc31/info.html well, the guy who was selling it to me got swine flu and it pretty much KO'd him from what he emailed me.

All is not lost just yet. I still have a Syquest 130 meg removable scuzzy that looks dry and may still have a copy of my programmer software. Talk about Rip Van Winkle, turns out they went out of business in 2005. Then I realized I probably haven't used my EPROM burner in 15-20 years!

There's one more link you should follow if you want to see a beautiful hack
http://laughtonelectronics.com/arcana/BrideOfSonPg1.html
Wade through that if you dare! I don't think it would work in an Atari because of ANTIC and 6502C but we can dream. What he did was intercepts the instruction byte when it loads on the data buss and replaces it with his own microcode in an EPROM. He implements linear addressing in a 65C02 for 4 megs and the instructions to get there and back.

Rick

Too bad the sex change didn't eliminate ball devices.

  Some Lisas were actually *converted* to a type of Mac and sold.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari SA of Lyon, France.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated)

Moderator: Kevin Savetz
comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

comp.sys.atari.programmer
Programming on the Atari computer.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari SA of Lyon, France.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated)
Moderator: Kevin Savetz
comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

comp.sys.atari.programmer
Programming on the Atari computer.

Thanks. I did not know there were two versions. Sounds like that is my
problem.

Good point.

And eesh, it looks like "our" web ring got taken over by some kind of
cyber squatter,   TheCyberMall.biz? I think I'll just drop the web ring
 from the Welcome FAQ, unless someone has a better idea.

Early Each November, Vendors start Advertising for the Christmas Season,
But forget the season for Giving Thanx. This November I'm Giving Thanx for
wonderful Atari Customers. Atari Customers are the Best. A real Blessing.
They're Loyal & keep coming back for more. Real Die-Hards. I'm Showing my
Appreciaton to my Customers This November. Buy from Bravo Sierra Computers
and get a gift from Bravo Sierra! Goto http://BenSells.Atari.org E-Mail
BenSells@Atari.org or Call Ben anytime at (503)256-9974! Got Atari?

http://www.aracnet.com/~atari/specials.htm   ATARI THANK YOU SPECIALS!
http://BensCatalogs.Atari.org   BEN'S FREE ATARI CATALOGS!

I've got a fast turnaround rate. Usually, Once I receive payment your
order goes out the same day. Customers love the speedy service! I have
lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and
Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!
DURING THIS NOVEMBER!!CUSTOMER APPRECIATION MONTH!! FREE GIFT WITH PURCHASE!!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

I have Indus GT rom image file rom. How do I put it into the Atari 8bit
emulator ? I need it for running DOS XL with synchromesh in the emulator.
Like 1541 rom is used in WinVice. Anyone can help?

Thanks!
Jack Tseng

Can we modify the Atari 1050 rom? I need to format the double density, use
26 sectors per track instead of 18. 90K is increased to 130K. Can 180K be
increased to 260K?

Thanks!

> increased to 260K?

Well, "it can", but the trouble is elsewhere. Double density really
means 256 bytes per sector, not 128 bytes per sector as usual. The
trouble with 128 bytes per sector is that a shorter sector size includes
more overhead to indicate the start of the sector, the sector and track
number and so on, overhead that is not visible otherwise. This
additional overhead reduces the payload that is available, and thus is
the reason why enhanced density provides less capacity than double density.

Now the reason why the 1050 is not capable of double density even though
the disk controller is is simply because the 1050 has only a total of
256 bytes(!) RAM on board. 128 bytes are used for the sector buffer, and
the remaining bytes are used by the CPU to work with. Thus, it is pretty
tough to extend the 1050 to double density without extending the
hardware in one way or another.

So long,

Thomas

Thomas gave a good explanation. There is a home brew 1050 US Doubler
mod where all you do is add a 6810 and burn the USD code into an EPROM.
Problem is now the 6810 is getting pretty hard to find.

Bob Wooley showed some interest in the 1050 since it used the 2793/2797
disk controller chip it should be able to do anything from 3.5" to 8"

floppies.
But then came the XF551 and SIO2PC and after hacking/promoting those
he kind of moved on to more challenging stuff.

Rick

Apparently he's already in touch with Bob. But if anyone else chimes in
here, I'll pass it along to Daniel, too.

Check out my new pet project:

  http://tuxsturtle.sourceforge.net/

It's based on the concept of "Delta Drawing", which I have (had?)
for my Atari 1200XL. It's turtle graphics, but it's even easier
to use than Logo. (It's commanded with single keypresses,
and responds immediately. [Backspace] both undoes the previous
drawing/movement operation that you see on the screen, and removes
the previous command from the program listing.)

The YouTube video I've got embedded on that page should sum
up the capabilities (hopefully). Enjoy!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

We have now launched SellMyRetro.com - the intention is to give an
alternative to ebay which is cheaper for selling retro electronic
items - but will also act as a place for traders, collectors and
buyers to come together.

We are currently working on a Wiki element for each category - the
text will be editable by store owners.
We also aim to have two types of webstore - a free one so that it can
be used to highlight the traders in each category even if they have
nothing to sell through the website, but if they do, they will pay
normal fees on everything, or a paid for webstore, which costs =A35 per
month, but they get 50% off all fees.

Feedback is more than welcome - I am sure we will have missed some
important categories!

You have definitely missed the important issue of hosting bandwidth. That
site cannot get out of its own way. Gave up trying to browse it.

OK thankyou - I have done some speedups on the php code and contacted
the hosting company about bandwidth.

Well the hosting company have done some work on the server and I have
now installed the Zend Optimiser - alas GoDaddy don't seem to be one
of the fastest hosting companies about!

I recommend the Vintage Computer and Gaming Marketplace:

http://marketplace.vintage-computer.com/

It's been around quite a while.

g.

Looks like M.U.L.E. is back!

  Planet M.U.L.E. is an economic strategy game for up to four players
  connected over the internet or your local network. It is based on one
  of the earliest multiplayer games of all time: Dan Buntens M.U.L.E. by
  Ozark Softscape.

  With the blessings of the Bunten Family, we are proud to present you
  the first official internet version since the game was released 26
  years ago -- and it's free for anyone to play!

http://www.planetmule.com/

I've yet to try it out, but I'm really glad they made a Linux version,
since I don't own Windows or a Mac! :)

Well that is a nice little site - it will be interesting to see how
sellmyretro.com develops - it probably helps that as well as hosting
the site, I am developing it to add more features, and listing a lot
of my own items for sale too!

Alas the code for http://marketplace.vintage-computer.com/ is not
adaptable by the site owner and you end up paying through the nose for
more features to be developed.

My own is based on the Enuuk platform - and I have reduced the time to
load the category page by 70%, which will help address the bandwidth
issue - although I think that is more down to the speed of the servers
run by Godaddy....

The Wiki section of sellmyretro.com is now implemented - would someone
like to provide some text on Atari 8 bit computers to add to the
site? Only those with webstores can edit the text, but I would love
to add some info on Atari and their computers.

Email me directly - rich AT rwapservices DOT co DOT uk

I've just learned that Atari was working on a special low-cost Atari computer to compete with the Vic-20 and Timex-Sinclair 1000. Codenamed "Zelda" and to be released as "The Atari 200", it was supposed to be software-compatible with the Atari 400 at one-third of the price. I wonder why I've never read about it here.

Apparently prototypes were sent out to software companies throughout the southwestern US in 1980 so that they could test and modify their products for compatibility. It had 4KB of RAM, which was more than the Vic-20 had, but less than anything it was supposed to be software-compatible with, but there was an even bigger concern. Its CTIA chip was a cheaper version that couldn't do the high 320-pixel-wide graphics or text modes. The operating system was retooled to center around 20-column text in "Graphics 1" mode, using an underscore cursor and no lowercase or block-drawing characters. This saves hundreds of bytes of RAM and ROM on its own, and they cut even more from the ROM by removing all the support for arrow keys, variable tabs, and other advanced screen editor commands. It still booted to Memo Pad, and BASIC and PILOT were still supposed to work. I don't know what it did for games that used hard-coded display lists; did Pac-Man have blank scores, or merely illegible ones? I got conflicting reports.

It had two joystick ports instead of four, and its keyboard was completely flat with a simple white keyboard design printed on it, matching the Atari 400's except without the unsupported control keys. I'm not sure whether they skipped out on the serial port entirely, as prototypes varied, but it definitely supported a line-in interface for loading cassette programs out of your existing stereo.

But what made it really remarkable was the case. As many of you are aware, the Atari 400 and 800 were designed with an excessive amount of shielding, as they were working under stricter FCC guidelines than when they designed the XL and XE series, and with more protective parts. The Atari 200 couldn't reach its target price with expensive metal shielding, so even though the circuit board itself was tiny, it was surrounded by a several-inches-thick case made of a lightweight polystyrene, treated with some recycled metals, and chemical dyes. This supposedly formed the case, the RF shielding, and the circuit board mountings, in two solid pieces. No fasteners were needed, as the top half screwed into the bottom half like the lid of a jar. Indeed, this was how you plugged

anything into the Atari 200, including joysticks and cartridges. This was reported to be less awkward than it sounds, considering it weighed very little, despite having a footprint the size of an Atari 800, and being twice as tall. However well it may have blocked radio interference, apparently they just couldn't work out a way to channel heat effectively out of that igloo of a case, and the case material reacted badly to the buildup. Indeed, all my Atari 200 research started when I was investigating why so many software companies in Phoenix had fires in 1980.

I've seen two marketing flyers that would have been distributed at CES and to local vendors if it had launched. In the first one, it's depicted in a classroom, and children are lining up to use it and program BASIC. The screen shows large text in three different colors, as if it's in Graphics 1 text mode. It's on a desk that's clearly too durable to have belonged to a public school, next to what I suppose is an Atari 210 disk drive, which would have taken surplus 8-inch floppy disks. In another, it's in a kitchen, next to a 40-column plotter and no monitor(!), and a man with an apron and a necktie has one hand on the keyboard and another hand on a frying pan, while cradling a telephone under his chin. According to the ad copy, this was apparently a campaign to have an Atari device in every room of the house, but I don't know who has room in their kitchen for an Atari 200. It would be neat to make a fondue pot out of it, I guess.

I've seen only one prototype photo, a Polaroid taken for an insurance claim. It shows the bottom half of the case, containing a circuit board, ports, and grooves to guide joystick cables and such out of the case, and a giant crack that's definitely not part of the design. I'm no engineer, so all I can say about the internals is that I didn't see a serial port in there, but I did see a section of ribbon cable that looked like it would have connected to the keyboard. It looks like it's been burnt or melted or something at the halfway point.

The person who showed me the prototype photo was going to scan it so that I could get the chips identified, maybe even get MESS drivers written for it. But he hasn't answered his phone or his door in weeks, which is too bad, because I need to return his Atari 1600 prototype, as I'm low on money and space and need to rent out the two bedrooms I'm keeping it in.

I understand totally Steven, my wife gets that "thunderclouds are rolling
in" look everytime she looks at my various comps and their storage places.

(although her "what-nots", glass figurines, 'n such can go anywhere, in
any number of cabinets, and the less said about them the better). :D

Just yanking your chain. :)

Does this SIO2PC have only female Molex 13 and DB9 ports instead of the male
plugs that I have typically seen in the past?

-Jess

Hmmmm... I'm not quite sure what counts as male and what as female for
the 13-pin SIO. The SIO2PC has a socket with 13 pins in it - just like

the socket you'd find on any Atari computer. The cable that plugs into
it has a plug with 13 holes.

And yes, the DB9 port is female. You can even plug it directly into the
PC if you remove the two screws.

Hrm, you should've seen a whole album.

In any case, it's now officially released! You can grab an ATR disk image
and view a few screenshots here:

  http://www.newbreedsoftware.com/gogogarb/

Includes source. (And I even went back and added comments! ;))

I could be off base here because I don't have one of Steve's latest
incarnations of the cable.

I was under the impression he added circuitry to his cable such that it
would be smart. That is, if you plug it between an Atari computer <=> PC
it will know you want it to be and SIO2PC cable. If you plug it between
a 1050/810 disk drive <=> PC it will configure itself as a Prosystem cable.

If the latest design does work as a Prosystem cable it will do what you
want. All you have to do is plug it into a PC and your drive and you can
copy disks from the PC directly to the drive. The interface is powered
from the PC serial port in that mode.

I haven't used the Prosystem software in ~10 years or so but I remember
it had several advantages over using a an 8 bit computer with disk drive
and SIO2PC cable to do make a disk copy. Since the image is written
directly from the PC the system doesn't need for the 8 bit read from the
PC via the SIO2PC cable then write the data to a real Atari drive, very
fast. If you have a lot of disks to convert, like a club library, that
is the way to go. It also has options for backing up copy protected
software and running it from the PC via a SIO2PC cable. I believe Steve
has a Happy drive or two and wrote the Prosystem software to perform the
same type of functions.

A common way of getting the signals out of a SIO cable w/o destroying it
is to just plug wires into the end. Someone suggested paper clips but I
find they are too large and bend the contacts.

IF I am right about the latest Ape cable working both ways that is the
way I would do it. Takes 1/2 the time to make the disks and can make
copies of your existing software on the PC. Of course I like everyone
else loves SIO2PC when it is working as a simulated drive but heck, if
you have a Happy it isn't necessary.

Just hook it up
Happy >SIO cable >~24 gage copper wires> Ape> 24 gauge copper wires> PC.

Rick

Seen on Gizmodo:

  Ben Heck's Latest Atari 800 Laptop Could Be His Best Yet
  By Jack Loftus, Sun Sep 13 2009
  http://gizmodo.com/5358415/ben-hecks-latest-atari-800-laptop-could-be-his-best-
yet

  "As Ben notes in the video, it's really the vintage Atari keyboard
  that sells this thing. The clickity clack is unmistakable, soothing
  and flashback inducing all in one -- he even managed to get the thing
  to pop up at near the same angle as the original!"

Gizmodo picked it up via:
  http://technabob.com/blog/2009/09/13/atari-800-laptop-casemod-ben-heck/

And finally, a link right to Ben Heckendorn[*]'s website:
  http://benheck.com/09-11-2009/new-atari-800-laptop

[*] His last name is NOT "Heck", despite everyone calling him that ;)

I don't think the issue is so much operational mode, as it is a desire not to
have to use an Atari computer on the bus to supply +5V power for the SIO2PC.
At least, that's my motivation.

I have never used the Prosystem software, but the free Linux package works
just fine in both directions. It emulates a disk drive to the Atari or uses
the Atari drive to read and write images.

Bill, that is one of the most amazing piece's of Atari kit I've ever
seen. Dammit, I want one ;-)

Mark

Honestly, I'd prefer SIO2SD over MyIDE (which requires OS alteration),
and a 1200XL keyboard and XL styling. ;)

Well, I'll concede that the 1200's keyboard is arguably the best, and I
have to say that I always liked the XL's looks best as well.

I'd still take one though. :D

Based on his Sales page, it looks like it'll be in the $1000-2000 range
(for parts and labor @ $100/hr).

Though he did publish a book on how to build these things.
(I just found it at his site and added to my Amazon wishlist ;))

Now all you need is time and talent ;-) I'm out. Sigh.

Its fired up my passion for Ballblazer, Koronis Rift and Rescue on
Fractulus tho.

I finally bought a legit copy of Rescue... one of these days I'm going
to have to figure out how to PLAY it. (Didn't come with a manual.)

I quickly switched over to Star Raider[*] for a bit last night.
My son seemed entertained. Oh, err... by the violence space battle.
Hrm. :^/

[*] Someone gave me a misprinted Star Raiders cart as a gift.
I ended up giving my previous _correctly-named_ one to someone else
as a gift, right after they got their first Atari 8-bit. (This was recenlty.)

I think my misspelled one is the one you see in the photo at Wikipedia,
unless someone's finally replaced it. ;)

Star Raiders is by far the best space shoot em up ever. Next is the
Rouge Squadron Series for Nintendo. Pit Stop, Pole Position.... all good
stuff.

Mark

Has to be one of my fav moments in gamedom, in Rescue On Fractulus where
the astronaut turns around and he's an alien - real shocker. :)

Until a few moments ago, the ATR I had on my FTP site was an older one,
which didn't have the latest code and didn't include the program itself! ;)

Sorry for any confusion (and thanks to Jan Krupka for noticing the problem!)

Ahhh! So now I will go back and get the updated atr. I have ran and
compiled the previous gogogarb.act and was wondering about the version
because of the comments..

Thanks
RoyE

Bill!

I just want to tell you that I like the garbage truck. It looks really
cool and I appreciate the impression of depth you have created with
multiple layers of things side scrolling at different speeds.

One of my sons was a garbage truck addict when he was four years old.

I remember when he got a toy garbage truck for Christmas. He wanted a
side loader (like the one in your Atari program) and I bought a huge
toy garbage truck which was a side loader according to the box.

When he opened it, out came a back loaded toy garbage truck. He
thought it looked great, but was disappointed.

Three weeks later, the first day at the preschool, the first thing he
said when I handed him over to the staff that looks after the kids a
preschool was something like:

"Hello, I got a toy garbage truck for Christmas. The problem is it was
a back loader, should have been a side loader, but anyway..."

Anders

Yeah, I got a nice Bruder (younger kid model, versus their scale model
perfection kind) back-loader for my son. For the first 2 or 3 days,
I was afraid he was going to ask to go to bed with it. :)

Gotta run,

I am new to the Atari scene, so bear with me.
Is there a chart some where that describes the game carts and what
systems it will interchange with?
Will 2600 carts work in an XEGS?

2600 carts work on 2600 and 7800
5200 carts only work on 5200
7800 carts only work on 7800
Most 8-bit computer (e.g., Atari 800) carts work on 400/800/XL/XE/XEGS
XEGS carts work on XL/XE

And of course, Lynx game carts (look like flat cards, usually with a curved
edge) only work on the Lynx, and Jaguar carts only work on the Jaguar. ;)
I think the ST/TT/etc. had cartridges, too, but I know nothing about those
systems.

Hopefully I got all that right. :)

Thanks Bill,
I was afraid of that. 2600, 5200, and 7800 carts can be found all over

the place, but the ones I need/want, I can't find locally.
The search goes on... But that is what makes this a hobby. :-)

Did anyone ever write a bmp converter for the 8 bit, running on the
8bit, that saves in either graphics 8 or 15 format?

I found this in one of my ATR's: Readme file for BMP2TIP.COM.. I believe
that I got this and several other converters
from http://www.atariage.com/forums/forum/12-atari-8-bit-computers/ this is
not 8 for 15, but it is a bmp converter. This is not a binaries newsgroup
so I can't post the ATR.

RoyE

    T I P - C O N V E R T E R :
   (short english instructions)

The TIP-Converter (BMP2TIP) will convert any 24-Bit, RLE compressed
Windows .BMP file to .TIP (Gr. 9+11; max. 160x119, 256 colors), if it
is no bigger than 160x119 pixels in size. The width must be 160 pixels,
the height can vary between (min.) 1 and (max.) 119 pixels/lines.
It is possible to convert many pics at once, just use wildcards (? and *)
to do so. When done, copy the .TIP pics to the little Atari and view them
with the TIPviewer from EPI/Allegresse...   Have fun !!!

Thanks for the effort Roy but I think I may have to write something
myself. TIP was one of those interlaced modes IIRC and I wanted to be
able to translate picture to a character mode.

Having a bad hair kind of day. Found one of my SIO2PC cables that the
little woman had tossed off the deck in one of her "episodes." It had
been sitting in the elements for about 10 years near as I can figure so
I decided to see if it worked. APE Wizard gave notice it didn't see a
CMD line so I switched it from RI to DSR and still no love. It was one
of my early prototypes using a 74LS00 so I finds me one of my other
oddball constructs: A 14C89 soldered to the copper side of the board for
reasons I forget. It had a 25 pin serial connector<yes, remember back
when clones had one 9 pin and one 25 pin serial port connectors!> I took
the 9 pin off the 74LS00 and soldered it in. Still no love with the same
error.

Kind of frustrating. I had visions of doing an op amp sio2pc cable to
lower loads on the SIO buss but not being able to get either cable

working has humbled me a bit. Even tried a 2nd 130XE with same results.

I think I need to start over from scratch.

Rick

Well brush my teeth and call me smiley. Only took another two hours of
screwing around.<sigh>

Of all things, after 8 hours of soldering, plugging, and checking, it
turns out it was my Dell laptop serial port. Downloaded the APE trial to
my other computer and everything worked just fine on it.

Kind of ruins my plan of using my laptop with my Atari in a quiet little
cabin I built on my property but I will just pull out and old Intel box.

Rick

Which movie? Couples Retreat? I've seen a poster for that but no sign
of an Atari Font (schmoltzy rom-coms don't seem very compatible with
the modernist style of the Atari font either).

Has anyone used APE R: device to telenet? I just have a few questions:
Does it use a special term program or will any terminal program work?
Can the target be another 8 bit computer hooked up via APE R:?

Does the IBM handle multiple connections and does the Atari?

Rick

I should learn to Google first. ;)

  http://g4tv.com/attackoftheshow/attackthis/68526/Creative-Computer-Mods.html

I thought he'd actually be on the show, I didn't think it'd just be someone
yammering on, with a few 2-second clips from the video Ben posted. :)

Plus, it is by no means the first Atari portable, there was that
1500XL (which I forgot about) from 2 years ago:

  http://www.flickr.com/photos/19933106@N00/3559260164/
  http://www.youtube.com/watch?v=EPRxx2r61iA

Heh, and this fellow also made an external CF card reader
that looks like an old Atari XL device; dubbed it the "1001".

Commodore 64's also got some laptop love:

  http://www.youtube.com/watch?v=eAnYFkMe_VA&feature=related

And on and on, and I'm getting way too jealous, sitting here on my clunky
new Dell laptop. :)

PS - We need that helicopter game for the Atari. :)

Hello!
Long time ago a did telnet connection to some linux server. It worked. I
used the Bobterm program.

Cheers!

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Yes, Couples Retreat! You must see it on the TV Commercial! =-=Ben=-=

Sent from my Atari

---------- Forwarded message ----------
Date: Wed, 23 Sep 2009 07:25:51 -0700 (PDT)

Which movie? Couples Retreat? I've seen a poster for that but no sign
of an Atari Font (schmoltzy rom-coms don't seem very compatible with
the modernist style of the Atari font either).

---------- Forwarded message ----------
Date: Mon, 21 Sep 2009 21:49:55 -0700

Has anyone seen the Ads for the new Movie with Vince Vaghan? They use The
Atari Font. Has anyone seen this?

Flight Simulator II can not boot the disk in XF551 due to the 300rpm
rotation rate incompatiblity issue. However it can boot in AtariMax's APE
image, more than 300rpm. I still do not understand.
Any help to explain ?

JT

I recently purchased an SIO2PC (Serial port version) and can't seem to
get anything to work. What I am trying to do specifically is to attach
my Atari 1050 to my DOS 6.22 Packard Bell 1750CDT (a 486/DX4 machine)
so that I can convert ATRs to real-disk format using the Prosystem
software. I currently only have the Prosystem shareware (version 1.18)
but I would be happy to register it if I can only see it work once.

I'm pretty sure that my mistake is in the COM port and interrupt setup
but I don't have any docs for the ancient DOS machine and I'm not
really sure what I should be putting in for those values. Any
suggestions?

All help would be much appreciated. Atari software is getting scarce.
(The good and valued services of Bravo-Sierra Computers
notwithstanding...)

Hornet.

Don't forget B&C Computervisions, BEST Electronics, and ebay (when you're
desperate... though I'm not sure I've even bought 8-bit computer stuff via
ebay.)

<snip>

If it isn't the latest incarnation of cable it may only work as a SIO2PC
cable and *NOT* in the Prosystem mode.

Do you have a real Atari? If so I would try hooking it up in SIO2PC mode
with the cable, APE as drive 2, and your 1050 as drive 1 to do the copying.

Rick

I do not remember how to configure the Com ports in DOS;
but MSD (MicroSoft Diagnostics) allows you to check which
are active under DOS 6.xx.
Win 3.1 gave you access to set some Com parameters at
Control Panel>Ports.
The standard address and IRQ should usually be:
COM1 $03F8   IRQ4
COM2 $02F8   IRQ3
COM3 $03E8   IRQ4
COM4 $02F8   IRQ3

Agreed. Although I have used eBay quite a bit and have only been
disappointed once or twice. In fact, I bought my current XL setup
completely on eBay and it works great.

Hornet.

Yeah, it's pretty recent and I purchased it straight from AtariMax
where it was advertised as being able to work with the Prosystem
software.

>Do you have a real Atari? If so I would try hooking it up in SIO2PC mode
>with the cable, APE as drive 2, and your 1050 as drive 1 to do the copying.

Good advice and I will try this next. Hope it works.

Thanks.

If I read you right, you're trying to hook your 1050 to the SIO2PC/Ape
cable. That won't work, there's other
adapters to do that, however, if you're trying to make real disks from
ATRs, you can do that with a sector
copier. You'd use the APE software, not the PRO system software in
1.18. Prosystem, as I understand it,
allows you to copy a copy protected disk that is in your 1050. Hmm.
I guess you do hook your 1050
directly to the APE/Pro adapter, but you'd be making PRO images for
use in APE, not making real
floppy disks from ATRs you get from various places. You'd make a PRO
copy of a copy protected disk,

then you could load those disks from the APE/PRO serial cable attached
directly to your Atari.
Sorry if none of this makes much sense. To summarize, I don't know
exactly what you're trying to do.

Shoot, lemme try again. not 'then you could load those disks...'
but
then you could load those PRO images using APE software not the PRO
software.
APE on the PC acts like a floppy drive, you point to ATR or PRO images
that you have on the PC and load from them.

If worse comes to worse, try installing a lightweight Linux distribution like Xubuntu or Damn Small Linux and use Hias's atarixfer program. I've had great success with it.

Also, you are hopefully aware that the SIO2PC requires +5V power to operate and that this typically is supplied by having a running Atari computer on the SIO bus along with the drive and the adapter? That one escaped me the first time I fired mine up to do disk imaging :-). I ended up modifying the adapter for external power, but don't attempt that unless you have electronic bench experience.

Short answer: If the red LED is not illuminated and the green LEDs are not both extinguished at idle then something basic is amiss with your setup.

I'm proud to announce version 2.13.0 of cc65. cc65 is a complete cross development package for 65(C)02 systems, including a powerful macro assembler, a C compiler, linker, librarian and several other tools.

cc65 has C and runtime library support for many of the old 6502 machines, including

- The following Commodore machines:

  VIC20
  C16/C116 and Plus/4
  C64
  C128
  CBM 510 (aka P500)
  the 600/700 family
  newer PET machines (not 2001).

- The Apple][and successors.

- The Atari 8 bit machines.

- GEOS for the C64 and C128.

- The Nintendo Entertainment System (NES).

- The Supervision console.

- The Oric Atmos.

- The Lynx Console.

The libraries are fairly portable, so creating a version for other 6502s shouldn't be too much work.

This version has many improvement over version 2.12. To name a few:

- Support for bit-fields.

- Improved standards compliance. Several missing functions and headers have been added.

- Improved compatibility with ancient K&R sources.

- Additional warnings in case of dubious code.

- The startup code went into the library. This simplifies linker usage. If you have a custom startup file, please check it - there have been conceptual changes.

- Several improvements in the libraries. Functions were changed for more speed or smaller size.

- "Secondary" linker configurations make it easier to support more than one setup per target system.

- Improved code generation. The code generated by the compiler is faster than before, usually without much increase in code size.

Precompiled binaries are available for the most common platforms. On many other host platforms, the sources compile out of the box, so you'll able to create your own binaries.

For RedHat Enterprise Linux 5, ready made RPM packages are available. These packages may also work on other rpm-based Linux systems. Please note that there are separate RPMs for the compiler proper, the docs, and the target specific libraries. To develop code for one of the target machines, you need the compiler RPM package *and* one of the target machine packages. Be sure to download the documentation package if you're new to cc65.

For windows users, there's a user friendly installer package (the one with the .exe extension). All subpackages are selectable from within the installer dialogue. The installer will also setup the necessary environment variables and start menu entries. It is recommended that Windows users choose this package instead of the .ZIP files.

Precompiled binaries for DOS, OS/2 and Windows are available in ZIP archives. As with the RPM packages, you need the package for the development host system (Windows or whatever) *and* one or more of the target machine packages, plus optionally the doc package.

All packages are available from the MU software FTP server:

ftp://ftp.musoftware.de/pub/uz/cc65/

More information on cc65 can be found on the cc65 web page at

http://www.cc65.org/

There is also a mailing list for discussing cc65 related issues (programming, suggestions, bugs, ...). See

http://www.cc65.org/#List

for information on how to subscribe to this list.

While I'm the main developer of cc65, it is actually a joint effort. I would like to thank the target library developers, all the people on the cc65 mailing list, all those sending suggestions and feedback, and even those bugging me for a new stable release:-) The CREDITS file is probably incomplete, but you know who you are.

Thank you!

Uz

Some checking.
OK, yes you can write ATRs to real floppy in a 1050 using PRO118.EXE.

It isn't necessary, as you could use
a sector copier and APE118.EXE instead.

So I've got Linux (and no Windows or APE), but I've got an SIO2PC adapter.

Is it possible for me to connect my 1050 directly to my PC via the SIO2PC
and use atarixfer to make backups of all of my aging floppies?
(What I had started doing before was 1050->Atari->SIO2PC->PC, but that
didn't seem to be working reliably.)

My main setup these days is an SIO2SD device. (In fact, the PC I've got
here that still has a serial cable is one I'm about to get rid of!)

The thought of having to create dozens or hundreds of blank virtual disks
(ATR files), then mount them one by one and copy floppy disk content to
them through my 800XL or 1200XL seems... tedious.

Being able to just hook the 1050 drive up directly to a PC and then
use the PC's command line to say: "copy what's on the floppy and make
a new ATR file out of it" seems much more appealing.

How do I tell whether I can do this? :)

Besides the compiler you might want to update compiler features section
(http://www.cc65.org/#Features) of the website as well ;-)

Nice work!

It depends on your interface. The interface sold by Atarimax is an
autoswitching SIO2PC / 1050-2-PC interface. You just have to supply
+5V if you want to use it in 1050-2-PC mode.

Most other interfaces are either SIO2PC ("atariserver only") or
1050-2-PC ("atarixfer only"). A few interfaces can be switched
from SIO2PC to 1050-2-PC.

Personally I'm using a homebrew SIO2PC and a homebrew 1050-2-PC
interface - and connect the one that I need.

Yes, this is a lot easier.

BTW: I uploaded a new snapshot (090625) a few days ago. The new
version also supports 38kbps transfer modes (XF551 highspeed and
Happy Warp speed) in atarixfer. If you've got a 16C950 card in your
PC you can also use Ultra Speed (Happy, Speedy, ~60kbps) and 1050 Turbo
Speed (~70kbps) with atarixfer and up to 126kbps with atariserver.

so long,

Hias

Just to pick one nit: You also need to install pull-up resistors on three of
the incoming signals to use without an Atari on the bus. However, it may be
simpler to plug in and power up your Atari and leave it attached while you run

atarixfer on the PC. Works just fine, but DO NOT try to access any
peripherals from the Atari while the SIO has the bus! That may very well let
the magic smoke out of something (figuratively speaking - you won't see
anything but it can cause damage).

Steve

Thanks for the hint! I've rewritten the section.

Regards

        Uz

Hello,

Is there any sort of interface that would allow me to use a CF or SD
card as storage on an ST?

I want to copy off all the files off my 3.5inch floppies but most of
them won't read on my PC (many are formatted for 82Tracks10Sectors).
Just thought this might be an idea to get round the problem.

Cheers
Ely

So my little garbage truck toy/game for my son came out pretty well.
Gave me some confidence. Then I went and tried to write another
new game, and have utterly failed so far. (Not guaging CPU use during DLIs
or something, and causing plenty of fatal lockups and crashes.)

At this point, I have too many ideas and not enough time or skill to
implement them. But some of my game ideas would probably be pretty
trivial for the more skilled programmers out there. (Esp. considering
I don't know assembly, and am trying to shove my ideas into Action!)

So who's up for it? :)

* Ever seen "Quantum", an old Atari arcade vector game with a trakball?
  I'd love to see an 8-bit version (heck, it could be in blocky
  GRAPHICS 7 mode). And support not just Trakball, but also Touch Tablet
  and Koala Pad, and mouse.

* Musical games
  - Guitar Hero (though that's best with a guitar controller :)
    see Shredz64)
  - Taiko Drum Master (surprisingly playable WITHOUT beating a drum,
    though that helps, too)
  - Dance Dance Revolution (pretty much REQUIRES a pad to jump around on)

Err... and now maybe it's late, and I can't remember all the ideas I've
been brainstorming for the past year. ;)

I don't have the time to contribute but I am trying to get back into
programming a bit after a long layoff so if you want me to take a peek
at your source code I will do it.

I do have an odd pet project I am thinking about that should get me back
up to speed if I ever find the time to work on it.

Years ago I did a rough dungeon/rogue type game that used 3d view
something like dungeons in Ultima III but closer in execution to Dungeon
Master type of step move, five color character set graphics, and had a
few tools for laying out graphics and play fields. Anyway I am going to
see if I can pull anything off the old Tandy 1000 I had the files stored on.

Not that it is a significant epiphany but I think I figured out how to
make it multi user on the 8bit side. Kind of along the lines of the old
bbs door game with a little bit of WoW MMPOG added.

I figure I can have the internet connected computer transfer data
encoded in blocks with position in each block being a players move or
response.

Let's say 8 bit game server side there are no graphics or screen
scrolling to interrupt processing. I should be able to get at least 2400
BAUD through put or the ability to get ~240 characters/second. For a
four player game you could update it ~60x/second or a 40 player game
6x/second.

Just had the data encoded by position and tokenized. i.e. 0 => skip or
null '1 => cast light '2 cast => magic missle '3 => attack with equipped
weapon '4 open door '5 => open chest.
Sequence may come out as strings<for arguments sake>
0100
=> player two casts light
2233
=> players one and two cast magic missile, players three and four swing
weapons.

Each player could have small server side buffer for a primitive chat.
That is accumulate text until EOL.
00H0
00e0
00l0
00l0
00o0
00<EOL>0
At which time it gets passed to the other players.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari SA of Lyon, France.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great
Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management
Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated)
Moderator: Kevin Savetz
comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

comp.sys.atari.programmer
Programming on the Atari computer.

Just wondering... Bravo and Sierra are phonetics for B and S.

Why would anyone buy from BS Computers? Sure, it's Ben's initials, but
in the minds of most English speakers, it's an acronym for something
significantly less pleasant.

I've bought from them - no problems at all. Many times, they had items or
software that I couldn't find anywhere else. Ben does over-post a bit, but
its not that big a deal for me - its what filters or the delete button are
for. :)

              Welcome to the comp.sys.atari.8bit newsgroup!

                  Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari SA of Lyon, France.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

I have bought things from Ben and things went fine. Hey, he may throw
out a lot of ads, but at leas he is there just in case you need
something. Not too many Atari dealers around so let's savor the ones
we have.

I have this game for my Atari 400 computer and loved playing. Now
I use my XE, but this game does not play function well. When you
try and read a scroll, it does not stay on long enough to read.
I hear there is a XE version of the game, but for years I have
not been able to find it. Anyone know where I can get a copy?

If it was an older game for the 400/800 maybe you need to pre-load the

Translator disk. I'm pretty sure you can get these from Bravo Sierra
or B&C...

>Falcon030 with 16meg of ram

Cool!

I myself have an Apple IIe, a Commodore 64, a Commodore Amiga 500, an
Atari 800XL and a 486DX-3 75Mhz running DOS 6.22 that I am keeping
alive and feeding well, but I would LOVE to get an Atari ST rig but
everyone who had a decent one seems to be holding on to 'em...

Ali Baba. I looked in my archives. I have it in .ATR form, and the
one from Holmes says it is
OSB (needs translator, or emulator). (You changed the title of a Ben
Smith thread, which will
get less notice than if you started your own thread, and I missed it
in Google groups, sorry Ed.)
I couldn't find an XL/XE version. If you're using a real Atari, you
could load the Translator B disk first.
I would guess it hasn't been modified to XL/XE OS.

http://www.page6.org/pd_lib/utilities/pd_translator.htm

You'd need a way to get the .ATR over to your XE, like an APE cable.

Or, buy a disk from one of the vendors, Ben Smith, Video 61, B&C, Best
to name a few.

Do all four fire buttons act as the same trigger? Or are they different
buttons? (a la the Atari 7800 ProSticks or whatever they were called,
where there were actually two different fire buttons, which some games used
as different actions; e.g., Jump vs. Fire)

Out of the box, all buttons are button #1. This is done because most
systems use a single button and some could even be damaged if trying
to use additional buttons (unmodified Sega joystick on an Amiga).
However unlike earlier versions, this version uses a 9 wire cable.
Why? For the very reason you mention it is easily modified for systems
that have additional buttons, or building a custom rapid fire switch
etc.

Oh, nice! :) Sadly, not in the market for any new controllers (I'm swimming
in them), but it's definitely nice to see new, nice-looking controllers
made for these old systems!

(Just got a Genesis. Still need an Amiga of some sort.
Oh, that and more free time. ;^))

Hi,
I'm looking for a original, working, cheap 220V-240 AC 9V, 3 or 3.4A
power supply unit for my nephew's Atari 1050 disk drive.

I found a shop selling it at a nice price, but it is in the US and
shipping are enough expensive for Europe, also needs an additional
voltage adaptor to buy.

You can write me to the address above or/and to:
davide.guida@formamedia.it

Thanks
Davide Guida

The Atari Computer Enthusiasts of Columbus will be hosting the ACEC
2009 Vintage Computer and Video Game Swap meet on Saturday 09-12-09 in
Columbus Ohio. The show will be Free for dealers as well as shoppers.
It will be held at Oakland Park Community Center from 9 am. to 3 pm.
We have a new feature this year that will allow dealers to pick out
what particular tables they want. Please check out our web site at
acec.atari.org for further information and updates.

I don't remember ever seeing statements combined in a single line like
that. Is this Atari BASIC or some other version?

With colons? Uh... Yeah, pretty much ALL BASICs support that! :)
e.g.:

10 PRINT "HI":PRINT "BYE":GOTO 10

Interesting. If I was ever aware of that, I've forgotten due to all the
other programming languages I've used in the 20 years since BASIC.

It does sort of seem to go against the principle that engendered the
idea of spacing your line numbers out by at least 10 (ie: so that it's
easy to insert additional lines in between other lines.)

Been a while I seem to recall there were conflicting goals. Not that
anyone ever wrote anything but spaghetti code with Atari BASIC *BUT* you
could save a few bytes by having your code at the line limit of just
over 120 characters. Line numbers are stored as integers so you can have
up to line number 32k. Each line number takes up an extra 2 bytes I
think. Atari BASIC was meant to run in the original 8k system and you
only needed 16k to run it with DOS.

Anyway it made for all kinds of gymnastics with people using the
abbreviations for commands so they wouldn't exceed line lengths. You
would write:
10G.10
and it would expand when you listed it to
10 GOTO 10

Of course this screwed anyone who tried to enter the program from a
listing and didn't know all the abbreviations.

There were programs that did things like replaced all your descriptive

variables like TOTAL with two letter codes like AC. Dave Small who did
the ST accelerator and the original CORVUS hard drive interface wrote at
least one 'stuffer' program like that. I think Crawford of Easter Front
and De Re Atari fame did one or two.

Rick

Combining statements on a single line saves 4 bytes;
2 bytes for the line number and 1 byte each for the
next statement offset and the next line offset IIRC.

The variables are stored as 1 byte tokens in memory
and in SAVEd files, so that shorter names conserve
only a few bytes only one time in the variable name table.

Vintage Computer Festival East - Sept. 12-13

This year's Vintage Computer Festival East will be held September
12-13 at the InfoAge Science Center located in Wall, New Jersey.

VCF is a public event celebrating the history of computers from the
1940s - 1980s. The morning schedule is for lectures and workshops;
the afternoons are an open exhibit hall where everything is turned on
and working.

Among this year's highlights are the keynote address about RCA
computers in the 1950s, an 8-bit musical concert, BASIC programming
challenge, and the build-your-own terminal workshop.

Details are posted athttp://www.vintage.org/2009/east/ where you'll
also find the latest VCF news. A 2-minute video montage of last
year's show is on YouTube at http://www.youtube.com/watch?v=0mNXrKjiD78.
Or refer to the simple event brochure athttp://www.vintage.org/2009/east/vcfe6.pdf
.... tickets are $10 for one day or $15 for both days; 17 and younger
get in free.

The event benefits the InfoAge Science Center, which is a 501c3 non-
profit.

Thank you,
- Evan Koblentz

Did OSS (or whoever bought them) ever release Action! into the public
domain? If so, where can I download it and the optional utilities disks?

If not, is it still available for sale?

Were there ever any third party books for action, maybe something like a
"Black Book"?

That would be FTE aka Fine Tooned Engineering Mike Holman.

AFAIK of the things FTE took over the only public info we have is from Newell who said deal with their memory upgrades wasn't finished to his satisfaction so he was putting them in the public domain. I'm not sure if he included anything else like Omnimon or Omniview. MyDOS which was closely tied to Newell product became ~free ware before that. You may be able to Google the group and find his post.

There is at least one emulator site that has Action! for download. I'm not sure if there are any complaints since cartridge sales for an emulator would be low.<grin> I don't know if it has the utility disk available but you wouldn't be missing much: The utility disk sucked donkey scrotum. I think I got mine on sale for ~$19 and regretted it ever since.

You may be able to find a cart on eBay but be prepared for sticker shock. Tutorials are nothing to write home about and there never was an instructional book written. A couple of us are pretty good with the language so if you have any specific questions why something doesn't work or how to do something we could probably answer.

Rick

Cut and Paste text files? Don't think it will work.

However, Atari800win plus (and Atari800) can directly import ASCII
text files (CR/LF delimited) or linux text file (LF delimited).

e.g.

Use a text editor. Paste your atarimagazine clipping there. Save it
to your_folder (whatever your folder's path is).

In the emulator set H1: to your_folder

In the emulator H6:-H9: mirror H1:-H4: but with end of line conversion

From BASIC if you try

enter "H1:my_prog.txt"

it won't work because the emulator is expecting to pass Atari EOL
delimited text files unfiltered.

To make my above example work you instead type

enter "H6:my_prog.txt"

Hope this helps.

Regards,

Steve Sheppard

Let's see if google groups will let me post since I am on my laptop.

Thanks for the links! Couple were busted but still enough worked to be
worthwhile.

I did check eBay and there were only 2 carts available for $130 and
$80. I think I only paid ~$70 for mine when it was new!
It makes me wonder if it is collectors or programmers driving the
price up. If it was just the language, I think someone wrote
Windows cross compiler. Personally I love the editor just about as
much as the language.

Adrift because it could be a month or two before I get my 65816 SBC. I
decided to give cc65 a look. I still don't have a
permanent Atari setup so I fooled around with everything else. I have
a small hand held MP4/3 player with an NES emulator
so compiled a couple of "hello, world" type programs to get the feel
for it. Turns out my hand held has a pretty crappy emulator
as it crashes on several program ROMs that the FCE emulator runs fine.
Took a bit of doing but it seems to run my code
just fine after a few mods. For some reason cc65 for the NES seems to
support <conio.h> and not <stdio.h> I guess it is so
you don't think there is a mass storage device or printer attached.

There's a couple of things about cc65 like the conio.h that I wish
were better documented. I guess it is the nature of
the beast in that you can't let anything be the default if you are
supporting a dozen systems. Between cc65 and Action! I
should be able to do some basic utilities.

Rick

In the UK, Maplin sells the L53BR PSU that serves your purpose, you will
only need a cheap British standard to Italian plug adaptor.

The History of Star Raiders: Taking Command
by Matt Barton, Bill Loguidice
Sept. 8, 2009

  http://www.gamasutra.com/view/feature/4127/the_history_of_star_raiders_.php

    Karl Marx once famously wrote that "mankind... inevitably sets itself
    only such tasks as it is able to solve, since closer examination will
    always show that the problem itself arises only when the material
    conditions for its solution are already present or at least in the
    course of formation."

    Although many of us may disagree with the bulk of Marx's ideology
    (or are baffled by such long-winded quotes), here we find a kernel of
    truth -- especially when applied to game development.
  ...

Good to see a good game still getting some love. ;)

I don't get it. Most of the text didn't even talk about the game at all.
It would have been better to reprint the article with an interview of
the game's designer, something I read some years ago.

Or at least a new interview...

Well, I think the main point was to show that all of the fancier games
that came later were (most likely) inspired by Star Raiders.

There seems to be a theme. (I didn't read the other articles it mentioned.)

Siis .. VAUDE!

08.05.2008 j�? historiaan hetken? joka kiistatta osoitti miten
maailmanenn?tysvauhtia suorastaan megaromahtanut ydinvoiman kannatus

konkretisoi laajassa rintamassa my�s Suomessa. Miten t�llainen saavutus on edes teoriassa mahdolista maassa, jossa ydinvastustaminen rinnastetaan sumeilematta maanpetokselliseksi toimeksi?
No ensinn� tieto ydinvoiman petollisista vaaroista on kiistatta alkanut saavuttaa maamme �lymyst�j� ja asioitten oikeista tiloista kiinostuneita. Kun yritin l�hett�� t�t� tietoa nettiin huomasin, miten RAIVOSSAAN ydinhallintomme tapahtumamuutoksista ydinasioissa oli. Nettini kaadettiin systemaattisesti sen kymmenet kerrat. Kas vaan riehuva SUPO/TVO/IAEA ei selv�sti ollut tyytyv�isi� aamun uutisanteihin!))

No optimistisesti toki oletan", ett� viel� tulee aika jolloin TVO p��st�� taas n�it� materiaalejani eetteriin. .. Kenties olen liian optimisti, kenties en, aika n�ytt��. Mutta kirjoitetaan nyt silti valmiiksi off-puskuriin. Eli jys�rip��ns�ryn takana on YLE:n yll�tt�en julkaisema ydinkannatustutkimus. Kuten hyvin muistamme vain vuosi sitten ydinvoimalla oli maassamme kiinte� huikenteleva +80% kannatus. Ja tosiaan nyt julkaistiin raportti siit� miten maastamme en�� 20% haluaa edes yhden lis�ydinvoimalan, jota TVO/Fortum/Fennovoima himoitsee!!!! .. !!!! ..

Kerrottiin miten n.2/3 osa on ydinvastaisiksi tulleet maasamme. Ydinvoimaa vastustaa naisista 68% joka taustoittuu hienosti taannoisen nuorisoparlamentin Niinist�n mittaamaan 80% ydinvastaisuuden kanssa kauniisti. Ehk� kaikkein huvittavinta on se, ett� ydinyhti�iden triplarakentelu sai maanj�ristystuomion, eli VAIN 4% on samaa mielt�! Ylisanani kehumisiin loppuivat liiasta k�yt�st� asiassa, joten se my�s numeroista. Mutta sitten mielenkiintoisimpaan. Mist� sitten miljoonat ��nens� ydinvastaisuudelle antaneet saivat tietonsa? TV:st�k�, no hei ei tasan! No lehdist��? Onko kukaan koskaan n�hnyt yht��n ydinkriittist� lehden omaa artikkelia ani harvojen sensuurin l�pi p��sseitten yleis�kirjoitususkalikkojen lis�ksi, no hei EI. Radiosta ei yht��n enemp��! MIST� t�m� massojen tieto siten on per�isin oikeesti! Naiset ja nuoret ovat tunnetusti alkaneet l�yt��.. .aivan oikein nettisivuilta maailman ainoaa viel� vaivoin SUPO:n sensorien l�pi livahtelevaa faktaa siit� miten ydinvoima on kylm� kuolema ihmiskunnalle!.. .Toki paljon olisi jatkettavaa t�st�, ett� ketk� ja koska, miten, mutta tosiaan miettik�� miksi vain miehet ydint�iss��n jossa netin k�ytt� on tiukasti kontrollein estetty ovat en�� merkitt�v�mmin ydinharhapoluillaan viel� hetken?.. ..

No "crayOFFs", but you park in a driveway and drive on a parkway.

Story is poignant. Unless you are looking for it, it is often easy to
miss the backbone of the story. O'Henry's "The Gift of the Magi" really
hits you over the head with it: Woman sells hair to buy watch fob for
man and man sells watch to buy woman a comb for hair.

You have to know a lot of trivia that most sane people would deem a bad
waste of brain cells. For instance Richard Garriott who by all accounts
made millions off the Wing Commander franchise mentioned in the article
has used the money to 1) Dive on the Titanic 2) Go into outer space in a
Russian space craft. I think he spent something like !$35 million on
those two vacations.

Doug Neubauer is relatively unknown<outside of our circle where he still
enjoys demigod status!> and still working for a living having never
hugely profited from a genre he pretty much created. Specifically a lot
of people have bought a lot of groceries with the paychecks they got
while working in the industry he created and they don't even send him a
birthday card.

But this is just the way things go. Tesla, Philo Farnsworth, et al,

outside of a geek circles nobody knows them. I mean even in the popular press Neubauer makes all the top ten lists but it is usually in articles only 'we' read. Tila Tequila on the other hand... Almost enough to make you hold the proles in contempt.<grin>

Heck I see he has a web site up so I will email him a seasons greeting this year.

Rick

I may have a spare Action! cart lying around. If you are still looking, drop me a line to remind me to look. :) Reverse each segment of my email address to actually get to me.

How can Battlesphere not be mentioned. Too bad. It is a super killer
game for the Jag, but it took a LONG time to come out. When it did, the
Jag was on it's way out...

Hello all,

I already asked this on the Atarimax Product Forum, but there seems to
be very little traffic there... so I'll ask here too. Google didn't turn
up anything useful, so please bear with me if this has already been
answered.

Ok, how do I use ProSystem with

1.) SIO2PC Serial version (just bought) from Atarimax - version with SIO
connector (rather than the terminal block for connecting bare wires)
2.) only one SIO cable available, so no way to power the interface
directly from the Atari.

From what I read, I need to feed some external power into the SIO2PC
module... but I didn't find an exact explanation of what has to be done.
One thing is for sure, I don't want to modify my existing Happy 1050
drive and/or SIO cable.

So....
0.) Any source of SIO cables other than eBay? I guess not...

1.) What voltage do I need?

2.) Where do I feed it into the SIO2PC PCB, possibly without doing any
irreversible damage to it?

3.) Do I need to add any more components to the PCB?

4.) Can I use the +5V from a PC Game Port? From the Atari's Joystick
Port? From an USB port? Any precautions to take in either case?

5.) If not, what kind (volts/amps/DC or AC) of external PSU do I need,
and how do I connect it?

6.) What about the serial DTR line, many devices use that one as well as
a power supply (pretty much all serial mice, for one thing). Is that
possible with the ProSystem software? How would I modify the SIO2PC in
this case?

I'd love to get comprehensive answers, but even if you can only help out
with one or two of the questions, please do so. Thanks in advance!

Regards,
--

I finally started working on the silly little garbage-truck-driving
game I've been wanting to make for my son. (He's been enamoured with
garbage trucks for at least an entire year now, and he's not even 3 yet.)

I just posted some photos to Facebook; here's a link to view them
(you don't need to have a FB account, or be my friend or anything):

  http://www.facebook.com/photo.php?pid=3096336&l=edd53da487&id=518895777

It makes a pleasingly obnoxious "beep! beep! beep!" noise when you
drive the truck backwards, and if you hit the fire button, it honks.
I expect my marriage is going to end soon. ;)

I just left a detailed response in the forum on Steve Tucker's site. Please
be sure you have the necessary technical skills before attempting the mod?

Hi Steven.

I looked at your response and thought I would add the joystick port isn't really a bad idea: Has 5v at .2 amps available. The poster didn't say what type of computer he is using but all Atari models have the regulated 5V coming out of the joystick. All that would be needed is a jumper wire plugged into say the second joystick port and run to the interface.

I have a number of USB powered devices but I share your caution. I am pretty sure the limit for a USB port is low, like .2 amps, so if he hangs to many cameras, mice, and the Atari on his Intel box it could end up being trouble.

I still have some trouble understanding what the original poster's beef is. I mean specifically he doesn't want to modify anything but he is still going to have to pull the other signals like data I/O and CMD from somewhere right? The SIO2PC module isn't wireless, has to get the signals from somewhere. Easiest way would be getting another SIO cable and cutting it in half.

Rick

Sure, that sounds like it would work. But, I think the goal is to run an
Atari disk drive from a PC without having a computer on the bus.

> I have a number of USB powered devices but I share your caution. I am

Even when USB ports on a PC negotiate successfully to provide power, they are
still marginal in many cases. I have a Tascam guitar trainer unit that plugs
into USB for the purpose of downloading MP3 files. Running on my ASUS P5B-DS
motherboard, it would spuriously disconnect itself and/or crash in the middle
of file transfers. By experimentation I discovered that everything worked
fine if I inserted a little wall-powered USB hub between the Tascam and the
computer. So much for standards...

Can't speak for the OP, but in my case I wanted to run a drive directly off my shop PC for the purpose of imaging or creating diskettes and did not want to drag out one of my Atari computers just for the sake of providing power.

Steve

Totally off topic, but man that sounds bad, "did not want to drag out one of my Atari computers..."

It should be on a pedestal! or at its own desk at least. :)

Hello Rick,

My "beef" is that I only own one SIO cable and that they seem to be hard
to get. I've been told now that some places still sell them. Still,
ordering stuff from the US is a bit slow and a bit of a hassle for me
since I'm located in Germany.

So my question (in the more abstract) was, how do I read/write real
floppies to/from Atari disk images, with the images located on a PC's
hard drive, and with my existing hardware. Which is: one 130XE, one 1050
w/ happy board, one SIO cable, one SIO2PC serial. And of course a PC and

a serial cable.

I think I will just try the Atari joystick port (or PC gameport) method.
Just stick a wire to the port. Seems to be the least hassle.

Thanks to all who answered!!!

Ah, sorry! My problem is "too many classic computers, not enough time".
There are so many little systems around here in various stages of
configuration and no free surfaces to put Yet Another Machine on.

If someone contacts me for an image of an Atari diskette, I just want to fire
up the shop computer and talk to the 1050 drive directly. If it's a matter of
setting up an 800 to do that, I'll be in three levels of stack overflow before
I ever get to the disk imaging part!

Steve

It was a terminal emulation program by John Palevich (sp?) originally
distributed through Atari's APX program.

I used Chameleon (tape version) many times to submit programming
assignments to school (way back when). Using tape and the slow
transfer rate (300 baud) was incredibly cumbersome but it beat driving
to school at 2:00 AM (the only time the campus terminals seemed to be
available).

There was also a loadable desk accessory called Chameleon. It allowed
you to load and unload ACC's at will.

Mark

UPDATES SINCE PREVIOUS POSTING:
2009.05.24 added: Steve Hales (Slime, Fort Apocalypse, Dimension X)
2009.05.24 HiassofT: Highspeed SIO patch for XL/XE OS and MyIDE OS V1.20
2009.05.21 Radek Sterba: Raster Music Tracker (RMT) v1.28
2009.05.19 Thomas Richter: atari++ 1.56 and new URL
2009.05.13 MadTeam: Ilusia, Deflater 7z v2.6, Check XEX, Build 1.1
2009.04.24 C.P.U.: SDrive Control Program v01 20090403
2009.04.15 Super Products updated, thanks James Bradford
2009.04.12 MadTeam: Graph2Font 3.8.6.6
2009.04.04 MadTeam: Graph2Font 3.8.6.5
2009.03.31 Zdenek Burian: FLOP 52
2009.03.05 added Avery Lee (Altirra 1.0)
2009.03.02 deleted: MacFalkner (web site gone, thanks Laurent)

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed.

Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry should contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Subject: A

4JAYS (Jay Colen) 9/04
519 W 4th St
Antioch CA 94509-1246
USA
Shop Phone: 925-777-1160
Store Hours: Tuesday thru Friday 12-6pm - Saturday 11-5pm

I was in the same boat, used it most of my freshman year with my little
xm301 modem and 800xl. I at least had a disk drive though. :-)

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra
Computers! Occupying a unique niche in the Atari World! Most Atari Dealers
sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods
at a competitive price, I also sell used Atari Goods you wont find at Swap
Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those
remaining anonymous! I test Goods before I sell them. Not only can I sell
you some Great New stuff! I can also sell you hard to find 2nd Hand Goods,
because I'm the guy people goto to give Ataris a New Home! Saving Orphaned
Atari's from Oblivion!Goto http://BenSells.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your
order goes out the same day. Customers love the speedy service! I have
lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

We received our 27,000th call this month and have over 30,000 messages
posted at the DarkForce! BBS during our multiple years of operation.

Are we a semi-permanent, quasi-mythical, sort of recognized institution
of the renowned Atari community yet? :)

I appreciate the info, was there a picture of a chameleon on the disk label
or on the
cassette version if anyone remembers?

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari SA of Lyon, France.

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra
Computers! Occupying a unique niche in the Atari World! Most Atari Dealers
sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods
at a competitive price, I also sell used Atari Goods you wont find at Swap
Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those
remaining anonymous! I test Goods before I sell them. Not only can I sell
you some Great New stuff! I can also sell you hard to find 2nd Hand Goods,
because I'm the guy people goto to give Ataris a New Home! Saving Orphaned
Atari's from Oblivion!Goto http://BenSells.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your
order goes out the same day. Customers love the speedy service! I have
lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and
Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

I'm almost postive it doesn't, I thought it was an APX title with only
text on the lable.

Yes I have the ScreenBlaster program which lets me use my Falcon in a
800 x 600 screen. Works great. You may want to try Best or B&C to see
if they have the program. I got mine from Best. Works great...

Attention all retrocomputing enthusiasts!

RetroChallenge 2009 is officially slated to run from July 1st to 31st,
2009.

RetroChallenge is a fairly informal "contest" whose sole aim is to
encourage owners of obsolete systems to do something (anything) with
them.
Projects are self-assigned and can include just about anything, from
programming to hardware hacks; restorations; multimedia... whatever
floats
your boat.

RetroChallenge is open to rosy-cheeked noobs and hoary old wizards
alike.

Swing by http://retrochallenge.net for all the details, or visit the
RetroBBS at telnet://bbs.retrochallenge.net

ok, I think there are 2 programs with the same name. Or same program with
different
labels. Just trying to clear something up. Thanks.

> or on the cassette version if anyone remembers?

I'm looking at the Disk Label right now, there is no chameleon on the label!
It's an APX Title with an APX Manual with Rainbow Colors on the cover! It's
about a 26 page Manual!

From Ben

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those

remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BenSells.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

ok, I found what I was looking for, there is more than 1 program with that
name.

btw Ben, do you have any new 5 1/4 floppy disks for use on a atari 1050
drive?

.

So I decided to crack open the Action! reference manual. Read through
the first 50 pages of it before I fell asleep.

One of these days, I swear, I'm going to fire Action! up again and write
some more games. I feel like I've learned a lot more as a programmer
(esp. when it comes to debugging), so I'll probably be a LOT more
comfortable with it than I was 10-11 years ago, when I wrote GemDrop. ;)

I'd love to whip together a silly little educational game for my toddler.
(My idea involves controlling a garbage truck. Difficulty could scale up,
starting with basic "drive the truck and collect cans" all the way to
where you have to start matching colors and/or shapes/numbers/letters.)

What I really need is:

(1) A proper place to set up an Atari 8-bit. (Right now, my 800XL lives
    in the bottom drawer of the TV stand, meaning it's not exactly ergonomic
    sitting, and typing is almost out of the question. :) Find for playing
    most games, though.)

(2) Free time. ;)

Speaking of Action!, it'd be really cool to be able to code in Action!
on a modern system (like my Linux laptop). Compile and link the binary,
and fire it off in an emulator, like Atari800.

Maybe, I guess, I should just start looking into CC65... Hrm

you can download a tool that mims the Action language

http://gury.atari8.info/effectus/

I am about to get an Action! cartridge and wonder if you know where I
can get a scan of the Action! manual

thanks

Hrm. Windows only? :((I can't tell, only guessing from the screenshots.
Plus, I don't really hear much about Pascal use on Linux these days ;))

> I am about to get an Action! cartridge and wonder if you know where I
> can get a scan of the Action! manual

I'd expect to see it here, if it were available:

  http://atariarchives.org/

Wikipedia says:

  "In January 1988, ICD and OSS merged. Later, Fine Tooned Engineering
  owned all of ICD 8-bit products."

and, assuming that's accurate, that means FTe owns the rights to Action!
and the manuals.

Oh, and in the meantime, I totally forgot about this!

  http://joyfulcoder.net/atari/action/?tab=language

Enjoy! :)

TEHRAN: Iran's opposition was set to hold marches and a day of
mourning Thursday for slain protesters as they keep up pressure on the
authorities over the disputed presidential election in the country's
biggest crisis since the 1979 revolution. Thursday's first rally was
set for 2 pm (0930 GMT) in front of the offices of the United Nations
and the second at 4 pm at Imam Square, according to people who took
part in marches on Wednesday. Meanwhile, ... Full Story

The manual sucks. I had to take a night class in C programming and use a

disassembler on the code produced by the cartridge before I even 'got'
what Action! was about. While it isn't a requirement I would say that
assembly language programming helps and prior experience with structured
languages like C or Pascal puts you a mile ahead on the learning curve.

The manual does have some things like how to use the editor that are
helpful but errors, less then helpful examples, and omission of the
basic ethos of structured programming and parameter passing makes it a
tough read.

There are 'Action Tutor', A B and C at ftp.pigwah.net, in Holme's
archives.

http://ftp.pigwa.net/stuff/collections/holmes%20cd/Holmes%201/ATR%20Program=
s/Applications%20A-Z/index.html

I can't recommend them, don't know if they are any good. They
are .ATRs.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari SA of Lyon, France.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated)
Moderator: Kevin Savetz
comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

comp.sys.atari.programmer
Programming on the Atari computer.

I discovered a 1027 printer that I had in a box.
Good for parts. Since it is apart.
Anyone need it?

I may have a spare manual and/or could scan a copy and make it available.
Just got my wife a fancy multifunction unit that scans stuff fast and good,
so I might as well put it to good use. I'm guessing an OCRed version would
be better than straight image PDF...

What's funny is: Pascal (on Apple II in high school) and Action! (shortly
thereafter) helped me comprehend C when I took it in college. :)

Of course, now, looking back at the Action! manual, the first half of it
seems pretty nice and thorough... then towards the end (sadly, as they
got into more complex topics), they kind of brushed past everything. :)

So as I read it, I say to myself: "oh, NOW I get it" (after years and years
of C and PHP experience).

I think I lost track of the Action! Toolkit, which might be handy.
I've found this site has been useful:

  http://atariwiki.strotmann.de/xwiki/bin/view/Code/ACTION

(Follow the other random links on the right, too!)

(And yeah, I can't sleep this morning.)

You are a professional in all things computer now right?

How hard is the simultaneous handling of multiple connection in things
like web pages handled? Is it possible to have ~200 users at once? Would
can it be done as a bot?

Set the WAY BACK MACHINE to the year 1985 A.D.

Compucat BBS had a text on online adventure that they converted to a graphical adventure similar to Rainbird's Knight Orc. The usual EWNS with pictures loading at various spots. They did the graphical version for the ST and I wrote a terminal program for the 8 bit that was ~equivalent for a R: input BASIC. I just used an escape sequence that you wouldn't normally see in text like #G to turn control over to the modem language interpreter.

So now we have something like 8 million knuckleheads playing WoW every night and MMPOG have been out for 12 years.

So what we<I have a mouse in my pocket :)> need is a bot or web page that will echo what one user does to 200 others if the situation calls for it. That is it has to be smart enough to know that if your character is on level 9, mine on level 8 will not see what he does. Maybe a multi player Rogue style game.

I figure we should do it before the C64 crowd!

Rick

In the past I put together a very basic multi-user web-based chat system
using a CGI. It involved plaintext files for the user database and
the current chat, and lockfiles which _attempted_ to keep it from all
getting clobbered at once.

<snip>
> So what we<I have a mouse in my pocket :)> need is a bot or web page

These days, I'd do it using shared memory on the webserver, or if it's
pretty low-speed, a basic database (like MySQL) should be sufficient.
(It handles all the caching, shared memory, etc. behind the scenes, anyway.)
That reminds me...[*]

> I figure we should do it before the C64 crowd!

Indeed! They get all the cool toys, these days! :^P
(Well, my SIO2SD is pretty frickin' cool.)

I had to write a multiplayer online maze game for a network programming
class I took in college. We simply started a new thread for each
connection. That's what server programs typically do, and you're only
limited by bandwidth, memory, and processor capacity. (Only? :))

I've been jealous of your game programming skills, but I've been doing
database programming, etc. for years - too bad we can't do a mind meld
and copy each other's knowledge and experience. :)

Well the scoop is I have 10 megs of web space on earthlink and I am in
favor of going the path of least resistance. I got in trouble for
running bots on my old netmagic account but it wasn't my fault. I'm not
sure about earthlink's policy.

So does MySQL called off a web page or does it need its own environment?
It's the e commerce thing right? I want to keep it small and simple so
an app that needs 500 megs of space is a no go. I'd settle for a script!

I'd really like to keep it as simple as something that lets people join,
just echos moves from one player to the others in the game. Figure do
everything client side for the first go around.

Something like:
Rick starts game, level is generated on Rick's 8 bit.
Trevor joins game
     Rick gets notice of Trevor wanting to join
     Rick's level layout gets sent to Trevor
     Rick's sends notice of Rick to Trevor
Bill joins game
     Rick gets notice of Bill wanting to join
     Rick's level layout gets sent to Bill
     Rick's sends notice of Rick to Bill
     Rick sends notice of Trevor to Bill
 From there program would just echo
     Bill moves north one step
     Rick gets told Bill moved
     Trevor gets told Bill moved
BUT with everything tokenized on the client side.
i.e. Character Bill is 1 and move direction is encoded in a single byte
i.e. ~first 2 bits is direction and next six is number of tiles. So data
stream would look like $01$41 that would mean Bill moved one tile north.

I mean I see web pages with info like "There are 3 registered users

online and 2 vistors" or "Look up posts by ricortes" et cetera. Just
want to do something simliar for the first go around.

If there is any interest we could do data storage and result calculation
server side but I really don't anticipate interest getting that high.
Couple of jokers showing it works then we all walk away.

Rick

Considering my current home office situation (nonexistent), and
the flexibility of the SIO2SD I bought recently, I've decided I'll probably
never fully utilize the MyIDE setup I cobbled together. It needs a better
home.

New ones are about $50, and this one should still be in pretty good
condition, so I'm asking $30 (or best offer), plus shipping.
(I'm in Davis, Calif., and will probably just use USPS.)

Thanks!

I'm not sure how compatible the Pandora is supposed to be with the GP2Xes,
but I'm betting that, at the least, an Atari800 port should be relatively
trivial. (At least, no harder than it was to get onto the GP2X.)

Sold and shipped, along with the HDD-in-an-SX212-case I had cobbled
together.

Thanks for the interest, everyone!

<thread poaching alert>

Speaking of which, if anyone has any spare SX212/XEP80 cases to get rid of,
I could use a couple. :) If you do, feel free to drop me a line by
reversing each segment of my public email address.

</poach>

I'm posting this via Google Groups because that's what I have access
to. If anyone is willing/able to crosspost this to the bona fide
Usenet, please e-mail me (don't just DO it, I don't want five of you
doing it and flooding the 'net). Thanks!

For sale: 74 issues of Antic magazine; 84 issues counting duplicate
and triplicate issues. Complete volumes 3-6, partial volumes 1, 2, 7,
and 8.

$50 or best offer

Detailed list:

  Vol 1: iss 1-5
  Vol 2: iss 4, 5, 7-12
  Vol 3: iss 1-12
  Vol 4: iss 1-12, w/ duplicate of iss 9
  Vol 5: iss 1-12, w/duplicates of iss 9 and 11, and triplicate of
issue 10
  Vol 6: iss 1-12, w/duplicate of iss 6
  Vol 7: iss 1-10, 12, w/duplicates of iss 1, 3, and 8
  Vol 8: iss 1-3

I can probably be convinced to ship these if you pay shipping and are
willing to wait for me to get around to it; otherwise it would be
vastly preferable if you can come and pick them up.

Cheers,

     Chris

               Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari SA of Lyon, France.

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or

Hello, I'm not sure if this is the right place to post this question,
but I thought that the Atari 65XE was an 8-bit machine (right?) so
here must be somewhere that I could ask...

Anyway, I have an Atari 65XE, which only has AtariBASIC on - I have no
cartridges or anything. I was wondering if it was possible to get
RS232 r/w access to a PC from the Atari, which would mean some special
adapter because it only has an SIO port.

I did some searching online, and I came across APE and SIO2PC - which
both seem to do things that I do not require, I only need to have r/w
access (from BASIC preferably) to an rs232 serial port so that I could
connect the Atari to another box with a null-modem cable (and maybe
use it as a dumb-terminal?)

...Is this possible with my hardware, and if so how would I access the
port from BASIC?

Thanks,
-- Me

The Atari 8 bits don't have a RS232 port; the signal levels are 0 and
+5V, whereas RS-232 uses +12V and -12V. IOW, you would need some type of
an interface to communicate with the PC.

The traditional way is the 850 serial interface (or the 850XL by a third
vendor) which features a "true" RS-232 interface and a handler ("R:").

The considerably simpler APE or SIO2PC solutions consist only of a
single chip that does the level conversions, nothing else, which means
you would need to program the hardware directly (POKEY, namely).
However, without such chips you cannot interface to RS232 reliably.

So long,
     Thomas

There was a device called the R-Verter which was almost the same as SIO2PC.
Back in the day I used to use one to connect a modem to my Atari.

Echoing what Thomas and Bill said a bit. You are going to need
something to interface if for no other reason then something with
compatible plugs on both ends.

The SIO2PC is what most people consider the best bang for the buck. Even
at that you still need a compatible plug for the Atari side. If a couple
of cables for hooking up things like a disk drive or cassette didn't
come with your set up, you are kind of SOL. You could build one for less
then $6 if you had a spare Atari cable.

I'm setting up a system after a long layoff so I will check if the
SIO2PC cable will work with the RVerter handler. It is rumored to anyway.

There is one other option I can think of. I hacked a simple cable that
hung off a joystick port that worked with the MPP modem handlers. You
would need to buy a couple of 9 pin plugs, some wire, a resistor, and a
zener diode IIRC. You are limited to ~300 BAUD and properly cabled it
worked with a Hayes compatible modem and a couple of software packages.

Rick

You need a R: handler to access a RS232 port. The port would have to
be on a 850, PRC, MIO, Black Box, which are much more expensive
than a SIO2PC adapter. You probably need a disk drive as well as
the 850 R: handler needs to load at boot. It may be possible to
write the PRC handler in BASIC DATA statements and POKE
it in from a BASIC program, that may work.
So, let's say you have a PRC, can load the R: handler from BASIC.
Then the following program would be OK at 300 baud to operate
your null modem.

```
*****************************
10 CLOSE #2:OPEN #2,4,0,"K:":REM open K: for read
20 CLOSE #3:OPEN #3,13,0,"R:":REM open R: for concurrent read/write
30 CLOSE #4:OPEN #4,8,0,"E:":REM open E: for write to screen
40 XIO 34,#3,192+48+3,0,"R:":REM turn on DTR,RTS,XMT
50 XIO 40,#3,0,0,"R:":REM Open R: for concurrent mode
60 XIO 36,#3,0,0,"R:":REM MUST BE 300, PROG. TOO SLOW FOR 1200 OR
HIGHER
100 STATUS #3,AVAR:REM causes 747 to retrieve from R:, I think, not
sure
110 IF PEEK(747)=3D0 THEN 200:REM number of chars in input buffer
120 GET #3,CHAR:REM if 747 <> 0 then get the char
122 IF CHAR=3D0 OR CHAR=3D10 THEN 200:REM discard ASCII 0 and 10
124 IF CHAR=3D13 THEN CHAR=3D155:REM translate ASCII linefeed to ATASCII

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra
Computers! Occupying a unique niche in the Atari World! Most Atari Dealers
sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods
at a competitive price, I also sell used Atari Goods you wont find at Swap
Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those
remaining anonymous! I test Goods before I sell them. Not only can I sell
you some Great New stuff! I can also sell you hard to find 2nd Hand Goods,
because I'm the guy people goto to give Ataris a New Home! Saving Orphaned
Atari's from Oblivion!Goto http://BenSells.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your
order goes out the same day. Customers love the speedy service! I have
lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or

Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and

So I saw a highly amusing video on YouTube the other day:

http://www.youtube.com/watch?v=I1qHVVbYG8Y

It's a cartoon, black on a white background, with not a ton of
detail, and motion that's usually focused on one small area.
I decided it'd be perfect to try and convert to something you could
watch on an Atari. :)

I used 'mplayer' on Linux, with the option '-vo png'
(aka "video out: save each frame as a separate PNG file") to extract
the frames.

Then I created a shell script that iterated every other frame (just to
keep the size down) and used some NetPBM tools to do the following:

  (1) scale the frame to 160x180
      (the video, shrunk down to 320px wide, was 180 tall;
      but I'm targetting GRAPHICS 15 (aka 7.5), so needed it 1/2 as wide)

      pngtopnm png/$j.png | pnmscale -xsize=160 -ysize=180

  (2) map the colors to 4 shades of grey, using a small 2x2 image I made:

      ppmquant -mapfile grey_palette.pgm

(3) cut out the left/right borders; I want to display in a narrow playfield,
    and most of the action in the cartoon is toward the center

    pnmcut -left 32 -width 128

(4) convert the file to a Portable Greymap (.pgm), which is 1 byte per pixel
    (rather than 3 bytes, like a Portable Pixmap (.ppm))

(5) compare the current frame to the previous frame, getting the difference

    pnmarith -difference gr15/$oldj.pgm gr15/$j.pgm > diff.pnm

(6a) crop any solid border from the 'difference'; I do this to get the
     position and dimensions of "what has changed", which I'll crop out of
     the actual current frame in step 7

     pnmcrop -verbose diff.pnm > crop.pnm 2> crop.txt

(6b) determine the dimensions; if nothing was cropped, we know that the
     boundaries of what has changed includes the entire size of the frame

```
     allbkgd=`grep "The image is entirely background" crop.tt | cut -d ":" -f 1`
     if [ "$allbgkd" = "pnmcrop" ]; then
       top=0
       bottom=179
       left=0
       right=124
     else
       top=`grep "off the top" crop.txt | cut -d " " -f 3`
       if [ "$top" = "" ]; then
         top=0
       fi
       # ... etc.
```

(7) calculate the position and size of the crop; keeping in mind that
    we get 4 pixels per byte in GRAPHICS 15 mode:

```
    left=`expr \( $left / 4 \) \* 4`
    right=`expr \( $right / 4 \) \* 4`
    width=`expr 128 - $right - $left`
    height=`expr 180 - $bottom - $top`
```

(8) crop the current frame, to get the delta frame that we'll actually
    store:

```
    pnmcut -top $top -height $height -left $left -width -$width gr15/$j.pgm >
crop.pgm
```

(9) finally, add that image to a 'stream' of data that the Atari will load
    and display; also need to tell it where, on the screen, to load into!

```
    ./add_to_stream $left $top crop.pgm >> stream.dat
```

And "add_to_stream" is a little C program I wrote that dumps a few bytes
of info, followed by data for a GRAPHICS 15 display. It gets appended to
the 'stream.dat' file, via the ">>" in the shell command, above.

  (1) Determing starting position (relative to the top of screen memory):

```
      left = atoi(argv[1]);
      top = atoi(argv[2]);

      start = (top * 128 + left) / 4;
      start_lsb = start % 256;
      start_msb = start / 256;
```

  (2) open the PGM image file, read its dimensions

```
      fi = fopen(argv[3], "r");
      fscanf(fi, "%s %d %d %s", tmp, &width, &height, tmp);
```

  (3) write the position and size of data, so the Atari knows how much to
      read, and where to put it on the screen:

```
      fwrite(&start_lsb, 1, 1, stdout);
      fwrite(&start_msb, 1, 1, stdout);
      w = width / 4;
      fwrite(&w, 1, 1 ,stdout);
      fwrite(&height, 1, 1, stdout);
```

  (4) read all of the PGM data, convert it to GRAPHICS 15, and spit it out:

```
      for (y = 0; y < height; y++) {
        fread(data, 1, width, fi);
        for (x = 0; x < width; x = x + 4) {
          p1 = data[x] / 64;
          p2 = data[x + 1] / 64;
          p3 = data[x + 2] / 64;
          p4 = data[x + 3] / 64;
          p = (p1 << 6) + (p2 << 4) + (p3 << 2) + p4;
          fwrite(&p, 1, 1, stdout);
        }
      }
```

And finally, so far, I've written a TurboBASIC XL program that mostly works,
though it's slow, and I haven't set up a proper display list to get
all of the GRAPHICS 15 display working in narrow mode. Tips welcome! :)

```
10 GRAPHICS 31
15 POKE 708,5:POKE 709,10:POKE 710,15:POKE 712,0
20 REM POKE 559,33
30 SC=DPEEK(88)
31 REM SET UP DL HERE
40 OPEN #1,4,0,"D:STREAM.DAT"
50 GET #1,SL:GET #1,SM:S=(SM*256)+SL
```

```
51 X=(S MOD 32):Y=INT(S/32):S=(Y*40)+X:REM WORKAROUND UNTIL NARROW SUPPORT
60 GET #1,W:GET #1,H
70 FOR Y=0 TO H-1
80   BGET #1,SC+S+Y*40,W:REM WOULD BE 32 IN NARROW
90 NEXT Y
99 GOTO 50
```

I need to do the following:

  * Figure out GRAPHICS 15 display list in narrow playfield mode
  * Figure out a way to make a very large (~512KB) ATR disk image
    (and/or skip more frames from the original video,
    and/or apply some kind of RLE or other compression?)
  * Figure out my 1200XL's 512KB RAM disk in MyDOS :)
  * Rewrite the viewer in Action!

Although, sadly, I doubt I could redistribute the video. Just fun project
for myself. ;)

But hey, with the appropriate tools (youtube-dl, netbpm, bash, and a C
compiler), anyone could take the same video (or others) off of YouTube
and figure it out themselves.

Should I set up a page with downloads for the actual shell script and
C and Atari (TBXL and/or Action!) source?

> I need to do the following:
<snip>

Oh, and limit the framerate. :) (Some frame diffs are very, very small.
In 'no change' cases, I store 1 byte, though I suppose I can just store
a 0x0 dimension, and the loader should not try to read anything. Duh! :))

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry should contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

              Welcome to the comp.sys.atari.8bit newsgroup!

                  Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari SA of Lyon, France.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or

Heh. I like Ben well enough. (He also helped with my Atari Party by
loading me some sticks.)

However, I never see his posts here. Killfiles can be your friend. ;)
(Sorry Ben!)

Here here. Unfortunately, I'm afraid Ben's doing himself a disservice by
pushing potential buyers to take the killfile approach. If there really
was something new and interesting going on at his end, I wouldn't know
about it because I no longer see anything relating to his business either

until someone else posts a thread like this.

>(Sorry Ben!)

Ben is a good guy.

By typical day to day / internet standards, his advertisements are
nothing but a drop in the bucket compared to what we are inundated
with.

By usenet old computer nerd group standards, it's a bit on the
frequent side ;) Still not egregious though.

BUT, it doesn't bother me. In fact, it was one of these ads that led
me to purchase a pristine, cream puff of an 800XL w/accessories from
him a couple years ago.

I could call him at 3AM and end up in an atari b/s conversation. Kinda
fun actually.

I will be buying my forthcoming 130XE from Ben as well.

So yeah, some don't like the frequency of his ads, but in the grand
scheme, it's not that bad. He does good business and has a good heart.
Jayson

I was a bit bored this morning so I thought I would check. Counted ~960
messages on my news reader of which ~100 were from Ben. Dates ran from
4-16-2008 to current or about two per week. It has climbed from 1 per
week to 3-4. For comparison I had about 50 in the same time period and
you had ~66. I think google has a statistics feature for posting
frequency et cetera but I think I am satisfied with my current level of
info.

Odd statement on the current level of 8 bit development. I have a good
excuse, death in the family, but I really have to get busy writing that
slip handler. I figure looking up this stuff was the last throws of
procrastination for me.

Rick

I've talked to, and bought from Ben as well. Good guy, just a bit
over-zealous with the posting. :)

I'd rather see his posts than the usual porn/sex adds and Sin<youknowwho>.
Don't want to mention his full name - I figure it would invoke him somehow.

 :D

Bees on the what, now?

My day job and family (and Tux Paint and my LUG) keep me WAY too busy.
Aching to crank some Action! out, though.

But some days I just feel like I'm not a very good programmer, so I want
some rocket-surgeon to write my games for me. I'm full of ideas -- both
in term of the gameplay, and how to convince the Atari hardware to do it.

I should hang out on the AtariAge forums, but... I hate web forums.
Give me email or usenet any day. :(

It will be day late and a dollar short as the saying goes. I hear MS is
leaving Slip out of Vista. Even for linux you have to compile a kernal
that includes it IIRC.

But there still are some tutorials on the web for setting up an XP box
serial port for a slip connection so it is worth a try. I will just
translate what I can from http://www.faqs.org/rfcs/rfc1055.html

The routines presented there appear to be just subs with no main control
loop.

BTW: What you are looking for is a job as 'a game designer'. Raph Koster
is worth a google search to see what the guy behind Ultima Online and
Star Wars Galaxies is about. I think you still have to do some grunt
work to climb the corporate ladder. He got his experience and chance
from his experience with MUDs.

Yeah, I have too many delicious items on my resume like "C", "BREW", "J2ME",
so recruiters are constantly bugging me about development positions.

Really -- and no big surprise here -- my dream job would be design
(and probably also some development) in educational games. However, my
current day-job is fun ... doing web stuff to help change the world of
independent ebook publishing. :)

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari SA of Lyon, France.

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

I have an 800XL and a Floppy drive for it, but not cables.

Are the cables just straight across for it? no switching of wires
anywhere? I can make one no problem, just dont' want to have
something going to the wrong place.

thanks

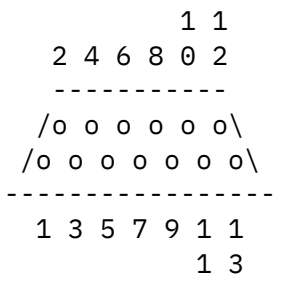
good info here:
http://www.allpinouts.org/index.php/ATARI_8_bit_Serial_Input/Output_(SIO)
THE SERIAL CONNECTOR

The serial connectors on the computer and all peripherials are identical. Nearly all peripherials have two serial connectors. Either connector may be used for any connection. The serial bus is designed so that peripherials can be daisy-chained together. The following is a diagram of the serial connector.

The serial connector pin-out



1 clock in (to computer)
2 clock out
3 data in
4 GND
5 data out
6 GND
7 command (active low)
8 cassette motor control
9 proceed (active low)
10 +5V/ready
11 audio in
12 +12V (400/800)
13 interrupt (active low)

Proceed goes to pin 40 (CA1) of the PIA. It is not used by present peripherials.

Interrupt goes to pin 18 (CB1) of the PIA. It is not used by present peripherials.

Pin 10 doubles as a 50mA +5V peripharal power supply and a computer ready signal.

A comment here. Ben never replied to my post. I musta been on Ben's
killfile, or he just doesn't read, just posts, or something.
AND.... I started about the biggest thread in my usenet experience.

Ben is ok, just want to sell his stuff. Sometimes it is nice
to see his posts. Lets me know there is still some Atari vendors
around.

You need cables, try Best Electronics or B&C Computers. They
will fix you up.

I see others have answered already, but if you haven't seen it yet,

you should check out the comp.sys.atari.8bit FAQ.

Wow.. It's been a long time since I've been here. Most of my 8bit hardware has
been parted out, but I have
enough remaining (including emulators) to still be functional.

Unreal how much software, books and manuals I still have buried in my basement.

Any BBS's still running on 8bits accessible via Telnet/ssh? Trying to get back
onto Darkforce now but am having
emulation issues.

Would it be possible to replace the Atari's 6502 with a Motorola 6809? I
understand both the 6502 and the 6809 were derived from the earlier 6800
CPU. I know the two aren't binary compatible, but are they electrically
compatible?

I remember reading about a 6809 board for the Apple II, so I was wondering
if the same was possible for the Atari...

BEST & B&C are still around. :) I bought from one or the other of them
within the last year.

I'm pretty sure Ben reads what's on c.s.a.8. I think he contacted me
when I was asking about stuff for my Atari Party back in March.
(Or... maybe I contacted him directly. I can't remember any more.
Nevermind ;))

I'm not sure if it would play nice with the ANTIC chip but electrical
compatibility with other chips from memory to PIA should be OK. Our
6502's have either a couple of chips or built into later processors a
mode that isolates them from the buss so the ANTIC chip has full control.

Assuming the ANTIC chip doesn't pose any problems, would this be a major
project? Would it involve much more than creating a new socket for the 6809?

I think it would be neat to get OS9 to run on the Atari. It's a
multi-tasking operating system that is very similar to Unix. An 8-bit Atari
with a 6809 should be able to handle it.

The 6809 is a fine processor.

There is the Contiki port to the 6502 but I think support was dropped
for the Atari after version 1.x or so.
http://en.wikipedia.org/wiki/Contiki

It has caught on but from the looks of things, mostly with the embedded
controller types.

I can't speak for anybody, that being said: It seems like 1) Most people
don't want to use C for programming their Atari. 2) Space is at a
premium so the Atari gets replaced by a more capable computer for things
like email and web browsing => lot of people on emulators if they do
still use Atari software.

I think most people with a real Atari have some flavor of interface like
SIO2PC which makes makes a suitable bridge to a PC/Internet.

I'm an adequate C programmer or at least I used to be. I also learned
machine language before any higher level languages like BASIC. Right now
if I program on the Atari I prefer Action! while others are "assembly or
die!" or BASIC or what have you. I just can't think of a compelling
reason to learn Contiki or go to C programming which is a step backwards
for me.

Right now we don't have a new killer application that is a must run on
an Atari. No VisiCalc or Lotus 123 or Word Perfect. We are still stuck
with 40 column screens in two colors so it is unlikely we will see a new
application that requires multitasking and internet access.

Rick

It would be a major project aside from ANTIC compatability issues,
wiring in a new socket for the 6809 would just be the beginning place
to start.

Considering the end result desired it might be better if you learned
to speak 6502 and then translated the OS9 code to work on the Atari 8-
bit as is. The bulk of the headache would then be code - why not make
it an all code headache and leave the hardware issues behind? Of
course in the translation of OS9 from 6809 to 6502 would be the re-
arraignment of the two system's hardware registers, but again done all
within code.

No soldering iron smoke with this approach and maybe that's what you
really wanted to do in the first place? I'm not wild about OS9 and
don't even know how big it is to start with, so I probably won't be in
on the project - good luck.

We have VisiCalc. I have one, or two. I used it long ago.

The 6809 has a few features that might be useful for other things, not just OS9. It has three 16-bit registers and has position independent code so it can be relocated without modifying code. The 6502 can't do that. It also has a hardware multiply mode. It's also source compatible (not binary) with the 6800, a relative of the 6502.

A shorter route to a better processor in the Atari would have been the
65802. Lots of things puzzle me like why the 65802 was never a success.
Even if it wasn't a direct replacement in Atari or C64<6502C and 6510?>
there were literally millions of Apple II it could be plugged into.

It seems to be platform dependent. People went nuts upgrading processors
in clones to V20, V30, AMD, et cetera. We did have two 65816 boards but
they never achieved a good market share.

Intellectually<sic> I know you could write some good code with things
like the ability to branch anywhere in 64k and block moves would be ~5X
as fast. The pragmatist in me say: A major problem with the current
6502C are screen and RS232 only works at ~300 BAUD in BASIC. Even if you
rewrote BASIC and the OS for any new processor you would still be lucky
to get maybe 1200 BAUD which is still pretty weak. BASIC is where most
people live. Too many people are used to DSL and USB speeds now.

Rick

From http://www.atariarchives.org/cfn/05/11/0208.php

 What is a 65802? It's another processor From Western Design Center that
 has all the extra opcodes of the 65C02 plus extras, like move memory
 commands, stack relative addressing, and the ability to set the

Accumulator and/or the X and Y registers to 16 bits. The nice thing about the 65802 is that it is "Plug compatible" with the 6502 and 65C02, meaning you can pull out a 65C02 from an existing system, and plug in the 65802 and it will work. The 65802 has two modes, emulation and native mode. In emulation mode, the processor acts just likea 65C02 with all the extra opcodes. In Native mode, the registers can be changed to 16 bits. There are some other more technical differences, but probably not worth mentioning them here.

I wonder if it might be possible to modify an 8-bit Atari so it could accept a 65802 CPU?

If not, would it be possible to take a 65802 FPGA and modify it so that it would work in a 6502C socket?

http://en.wikipedia.org/wiki/Field-programmable_gate_array

The big question of course is - are there enough 8-bit Atari users left to make such a project worthwhile?

There may be a window of opportunity. What has happened is eBay resulted in pretty good sales for j113<?> of just under 3,000 SIO2PC cables and I see Atarimax which I assume is either Steve Tucker or at least a marketing connection is close behind at ~2,000 of his mixed product lines. I doubt if there are 200 active members in any forum including this one but it does seem like there are thousands of them looking on eBay.

I do have an old 800 with a 65C02 chip in it. There were two types of processors used in the 800, the 6502B which used a different personality board that included the ability to halt the processor and a later board that came with a 6502C that included the !HALT line on the processor.

If you are really bored the Atari Technical Reference has the original schematic for the 6502B and with the 800XL schematic<6502C> you can tell which parts are missing. I recall only about 3 ttl chips are replaced.

I've heard it both ways in that all you have to do is replace the 6502B in the original 800 so equipped with a 65802 and it will work and someone else said it doesn't generate the same clock phases as a 6502B so it won't work. I actually bought a 65802 off eBay but the little woman in one of her "all your junk is crap" moods may have tossed it.

I've also heard you could just add the 3 chips to a 65816 to make a daughter board for replacing the processor in an 800XL.

Heck, I have been puttering around a bit lately. Found a couple of decaying SIO2PC cables and have a couple of 130XE that work. I plan on setting up a system for fooling around. If the price is <$100 I would be a customer.

I jump around a lot though. Right now I have been looking at
http://sbc.rictor.org/sbc31/info.html
This board seems interesting to me on several levels. In and of itself I like the 320 X 200 X 8bit display and hardware. 640 X would be better of course. I'm thinking this may be my next computer/time burner.

Rick

Hi folks,

please find a new version of atari++, the atari 8 bit emulator, available for
download. Note that this is the new web-page, at:

http://www.xl-project.com/

 From the README:

Atari++ 1.57
- Fixed a couple of issues in the GUI, specifically when entering
  data into string gadgets.
- Fixed again a couple of exception handling issues in the menau.
- Made the keypad stick configurable, the keys for joystick emulation
  are now part of the configuration.
- Added a dummy front-end, "NONE", that does not render anything to
  the screen.
- This release supports .CAS images; however, they are not part of a C:
  (tape) emulation, but emulated as disks. Depending on the contents of
  the tape archive, the disk is either considered a boot disk, a binary
  or a basic file.
- This release supports better disk support for BASIC and MAC/65 files.
  If you insert such a file into the emulated disk drive, the emulator
  will build a DOS 2.0S compatible disk structure around it and you can
  load the image from the emulated disk as D:PROGRAM.BAS or
D:PROGRAM.ASM.
  Note that such disks are *not* bootable, you first need to boot, and
  then turn on the emulated disk drive.

It should also fix the keyboard issues in Action!.

Have fun,
Thomas

I read a few years ago that when Jeri Ellsworth was finished with the C-One,
she would make a similar unit for the 8-bit Atari's. Is this still going to
happen?

Oh, if I had known that, I would've had something more to talk about
than just "oh hi!" :) when I saw her at California Extreme last month. ;)

There was also the Atari Flashback 3, which was going to be an
Atari 8-bit gaming system. I guess that got canned...? Anyone know the
details?

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Hallo Thomas,

da bin ich mal gespannt !

Werde mir die neue Version runterladen und testen. Ne Runde "Jumpman"
w�re ja
auch mal wieder nicht schlecht :-)

Gr��e aus Kiel
Helge

Last-modified: June 6, 2009

              Welcome to the comp.sys.atari.8bit newsgroup!

                  Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari SA of Lyon, France.

Me too. I have bought from both and Ben for that
matter. I do not know what I would do without Best.
I know that if I need some hardware, they will
have it.

Right before I gave up using an Atari for my primary computer and
switched to a PC, software came out for both 80 columns (I know there
was hardware available for it, but this was actually done in software
using graphics 9, if I remember right - it's been over 20 years) and
task switching. As I recall, they both worked rather well. Of course,
now I can't remember what either one was called... :(

OMNIMon or something? Or wait, was that the hardware one?

There are two very fast software-driven ways of doing 80 columns,
each used by different modem/terminal software programs.

One utilizes a pair of GRAPHICS 0 40 column text screens, and
a pair of character set fonts. One with text on the left half,
the other with text on the right half. Laying the text out
in memory proplery and flickering between the two chunks of
text data and two pairs of fonts, and you get a (flickery) 80
column mode that only costs you 4KB. (1KB each per font, and
<2KB for the 80x24 of text.)

That's Flick80 mode, used in FlickerTerm, if I'm remembering
the names right.

Then there's a variaton on the old-style GRAPHICS 8 mode,
where text is blitted into 4x8 areas of pixel data within
a 320x192 playfield. Except when you go to scroll the
screen up (due to new text at the bottom), rather than move
nearly 8KB of screen data, it merely wipes out the topmost
line of text, and re-orders the Display List to put that
line at the bottom, and push all the others up 8 pixels.

It scrolls a LOT quicker than normal GR.8-based 80 col
text drivers.

That was used in Ice-T. (Not sure if Itay ever made
a separate driver you could Binary [L]oad and use
for the E: driver. There was one based on Flick80 mode,
though!)

Yes, I have Omnimon and actually wrote an 80 column terminal program
with my own screen handler for one of my buddies that needed to access
the mainframe at work using his Atari at home.

Problem is you need to use an 8X4 vs. 8X8 character set so it sucks as
far as legibility goes. 1<one> vs. l<lc L> for instance.

I've been on an odd kick lately. I just committed to buy one of those
65816 SBC computers I posted the link to so I have been trying to figure
out how it works. The graphics chip it uses was derived from
http://elm-chan.org/works/crtc/report.html

I *think* I have this right: The designer of the 65816 SBC, Daryl, says
it will also do ~VGA with more processor overhead. Looking at the
original display link IMO it would be a trivial hack to put it in an
Atari. One of the things Daryl did was interlace memory access between
the display chip and the processor. I'm not sure if that is why he made
several design decisions like only using a 7mHz clock on his SBC but it
would seem to make sense.

Overall I am happy. By that I mean the SBC is roughly equivalent to an
STE [7mHz 65816 ~= 16mHz 68000, 512k memory, 256 colors in 320x200
display, et cetera]. I will be able to redo the Action! run time package
to take advantage of the 65816 instruction set which for things like
block moves should be 15X as fast as our 6502. Not that I would do it,
but a person could do a faithful Dungeon Master clone.

Anything on top of that would be gravy. I mean if I do actually hook one
of those display chips into an 8bit most of what I want will be
available, just slower. The original display had a 1mbit or 128kb which
should be plenty good for at least static displays. I've been pretty
much out of touch with other hackers for two decades so I would have to
make new friends with access to FPGA programmers.<grin>

Rick

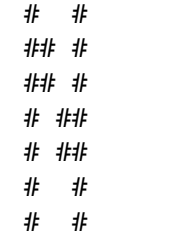
Due to the flickering in Flick80 mode, you can actually get away with
4-pixel-wide characters. They don't mush up against each other quite
the same way as they do when you're not flickering.

e.g., if you made a 4-px-wide "N"



and put two of them together, it looks like this in a normal
(say, GRAPHICS 8) bitmap mode:

But in Flick80 mode, you perceive this sub-pixel-wide gap between them,
since they're never actually touching:

(My ASCII representation isn't really doing the effect justice. ;)
But trust me, it's there.)

I was recently reading about a trick in GRAPHICS 0 mode whereby you could get a 40x32 (?) grid of text. Each character in the font is 6 pixels tall, but you can somehow convince ANTIC and/or GTIA to only show those 6 scanlines per line of text.

It was used in some music composing program. I think it was discussed here recently, or maybe I read about it on some web forum (AtariAge?). :^/

I'm fond of the Opera Mini way, where they run a proxy to manipulate the
web pages into something smaller. I'm sure Squid could be configured to
help with this (I think the Skyfire browser for Windows Mobile uses
Squid on their server end).

> I, for one, would want SSH and HTTPS. :)

Telnet to a Linux box for SSH. :-)

I copy the basic list from the atarimagazines website instead of typing the
whole line but I am not able to paste it to the Atari800Win Plus 4.0. How do
I paste ? Any help?

Thanks!
Jack

I have the original starbowl football tape. I am looking for the program
that converts tape to disk. Any help?

Thanks,
Jack

I'm not sure if it's possible. However, you could paste it into a text
file on the host system (Windows), then read it in via the "H:" drive that
the emulator can make available to you. (A folder on your host system
that the Atari can read from.)

You'll need to convert MS Windows ASCII end-of-line (EOL) sequences into
Atari ATASCII EOL characters. Something you could do in BASIC like:

```
10 OPEN #1,4,0,"H:PROG.TXT":REM THE FILE IN WINDOWS
20 OPEN #2,8,0,"D:PROG.LST":REM DESTINATION ON THE DISK IMAGE IN ATARI DRIVE 1
30 TRAP 100
40 GET #1,N:IF N=10 THEN GOTO 40:REM IGNORE LF
50 IF N=13 THEN N=155:REM CONVERT CR TO ATASCII EOL
60 PUT #2,N
70 GOTO 40
100 CLOSE #1:CLOSE #2
```

Or something... untested, so YMMV ;)

I've got a webserver (virtual private server, these days) that hosts
tuxpaint.org and billsgames.com. Full root access, MySQL installed,
practically limitless space and bandwidth. (Esp. for Atari 8-bit needs :))

Seems more flexible to have the level generated on the server.

So in other words, we could do "web-based" multiplayer game, for
typical PC users with browsers capable of rendering HTML and GIF/JPG/PNG
images, and then a binary-encoded version for Atari users.

> If there is any interest we could do data storage and result calculation
> server side but I really don't anticipate interest getting that high.
> Couple of jokers showing it works then we all walk away.

Yep. :)

Sadly, I don't have any internet connectivity on my Atari 8-bit.
(This is where a gadget like that ethernet gadget C=64 users have would
come in handy! :))

I've done a _little_ bit of R: programming on the Atari, years and years

ago. But no modem these days. I suppose I could do the web backend and
test it via Atari800 on my Linux laptop. :)

PS - If you've got a PC that you can install Linux onto, you can easily
install MySQL database, PHP scripting language, Apache or lighttpd webserver,
etc. etc. If the PC's got a serial port, you might be able to null-modem
across to the Atari via an Atari 850. Then set up a terminal on the
serial port that the Atari could 'dial into', which just acts as a front-end
to the webserver. Got a Pentium 133 handy? :)

That's one way of doing it, but if the game is slow enough (i.e., move-based
versus realtime), than having each Atari (or whatever) occasionally poll
for game state and report their users' moves via the webserver, then you
can let your Apache webserver and MySQL database worry about the networking

and keeping state.

AND (as I just mentioned), you can make a 'real' web front-end for PC users
to play the game over the web. (And throw in crazy JavaScript, DHTML, etc.
to make it more interactive.)

Raph Koster, lead designer for Ultima Online, said something like 'The client is in the hands of the enemy!' They had to move all the stuff like action delays to the server to keep people from doing things like 600 attacks a second.

Not a real problem I guess: Just server side layouts. I mean everyones favorite games from Pac Man to AR used fixed layouts.

But the best would be matching layouts to squeeze more out of the bandwidth and server. That way you could store the same layout locally and not have to send it every time someone joins. Wouldn't use a lot of processor ticks to calculate a random level either.

The Compucat BBS and I *think* current telnet BBS door games have problems with multiple users. Too many dead brain cells ago but I seem to recall something like you have to throw a small fortune at the problem to get 200 users to connect to a telenet BBS simultaneously. So web server is good if it can be hooked to an Atari. I don't even have a shell account anymore so it kind of limits my thinking. I mean it could be done in Lynx with a text only interface but who has a shell account anymore, except you probably.

I mean you would have to reduce it down to the printable characters but
it would just shift the tokenizing a bit. i.e. ASCII for !" => 33, 34 =>
could mean Bill fires his BFG 9000 north. Maybe I am making a circular
argument trying to figure out what is easiest.

Been forever since I have had an Atari hooked up. Back to back long term
relationships that think Potpourri will fit where my Atari used to be if
only they throw it down a flight of stairs. *BUT* I went by a surplus
store and found an 130XE with PS for $5.99 so I am back in the real
Atari hardware world. I should know but don't what APE can do. I think
it emulates an 850 serial port but it would be getting to be a little to
much of a hack to hook into it.

I've got two K6 500 MHz laying around collecting dust. Probably a spare
AMD ~2600 if I look. I haven't worked with C or Linux since the early
90's so it would take me longer to learn the ropes then to program the
Atari. Well, I will get the Atari set up today and see what happens from
there.

That is actually generated on the server side. All the client sees is
html (assuming you're talking about the typical php-based forums; for
stuff like Facebook, the client is using Javascript to continue
communicating with the server after the initial page load).

I'm not sure how you would do this any of this on an Atari 8-bit though.
All the networking stuff that I'm familiar with requires TCP/IP.

Back when I did it for the 8-bit I tried to make it as high level as a
real basic and had most of the commands you would normally see. Commands
like Graphics 15 and POKE 82,0 were included so if need be it could be
just text echoed. Even had a load binary and eXecute at memory address
for doing things like installing character sets and running small
assembly language programs.

I would say let Windows or a Linux box handle the TCP/IP stuff and just
echo what's left. Hook the Atari to Intel box via it's serial port. I
know new ones don't have serial ports so there is a short window here. A
Mozzilla add on would be nice. It does sound like too much work though.

Rick

Let's see. My Linux laptop, my Linux webserver, the Linux webserver

at work, and my ISP shell account (where I run Mutt to check my email
and Tin to read Usenet). That's it, these days. ;)

> I mean you would have to reduce it down to the printable characters but

Tired, so losing it, but remember that a webserver can echo binary
data (GIFs, JPEGs, PNGs, MP3s, MPEGs, etc. etc.)

A tool like 'curl' or 'links' or 'lynx' can easily dump the raw binary
data out to the terminal.

Ooh... That's depressing. The situation I'm in is a very small house
we're renting, with a 2.5yr toddler roaming around. So my 800XL is stuck
in a drawer under the TV. He can't open the drawer yet, so it's safe
there. _And_ hooked up! :)

Once I get my/a 1200XL back from Bob Woolley, I may need to find somewhere
to set up a Man Cave so I can sit and code a little, now and then. :)

Heh. Hopefully it doesn't fly down stairs. :)

Again, the idea here is to use a modern server (e.g. a Linux box with
a webserver and maybe a database) to run the bulk of the game, and the
Ataris act as clients. They could do it over modem or serial->PC.

Apple would not allow this on iPhone. ;)

(Sorry, I had just read an article about a mighty fine looking C=64 emulator
for iPhone that Apple won't accept since it 'runs executable code.'
Despite a NUMBER of other emulator-based games being available.
Apple's being annoying and inconsistent.)

Yeah, I have no idea what a Windows users would use, to actually
make the Atari talk to the Internet. (I don't know, offhand, what
a Linux user would use, but I'm sure all the tools are there and
readily installable.)

If it can be done in Linux, it can be done in Windows. ;)

Actually, this reminds me of the project I encountered recently (but haven't yet tried) which enables you to play MULE with 4 players through the Internet, through one of the emulators available on Windows. But of course that would be different than what you have in mind.

BMV Property Deals
[Url:- http://www.publicangelmembership.com/kb/2009/05/bmv-property-deals/]

Despite the rather depressed state of today=92s economy, making money through proeprty is easier than ever before thanks to BMV property deals. Indeed, savvy investors know that now is definitely the time to scoop up some incredible deals. Many properties purchased today are sure to increase dramatically in value in a short amount of time - which means easy, amazing profits for people who act now. If you have never dealt with below market value properties before - or are a novice to BMV property investing in general - there are still many excellent ways for you to break in to this market.

Where To Find BMV Property Deals

Any problems that people may have in finding BMV property deals has less to due with a lack of available opportunities, and a lot more to do with a general lack of knowledge regarding where to find them. The climate of today=92s property market is a prime breeding ground for these types of opportunities, and more people than ever before are getting involved in these sorts of investments. But where are these great BMV property deals? The fact of the matter is, they are probably right under your nose.

BMV Property Deals - Hidden In Plain Sight

If you have little to no experience in property investing or in researching the current market, then you are likely to grow frustrated quite quickly on your search for BMV property deals. However, the surprising truth is that below market value property deals can be found in many different places. The trouble is, though, that their actual value and profit potential is not necessarily highlighted or brought easily to the attention of deal seekers. This is why BMV property agents who specialise in BMV property deals do such a brisk

trade - they know where to look, and how to match investors with these incredible deals.

Using An Agent In Your Search For BMV Property Deals

Even if you think you have a bit of a handle on the property investment market, you could probably stand to use the help of a professional BMV property agent. Searching for true deals in the below market value property market can be time consuming - and incredibly frustrating. However, if you enlist the help of a qualified professional, you can get to the point much more quickly. However, what=92s the best way to find an agent who can really help you?

Get Help In Finding BMV Property Deals With A Proven Leader

Hundreds of satisfied customers have already enlisted the aid of http://www.PublicAngelMembership.com in their search for great BMV property deals. You can discover what all the fuss is about by joining them and receiving the best help available today in making amazing profits off of property. Why waste your time in trying to go it alone, or in searching through hundreds of BMV property agent listings?

Let the professionals at http://www.PublicAngelMembership.com assist you in your endeavour; the time and frustration you save is reason enough to do so.

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BenSells.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and
Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

Sorry I can't find the link now but a long while back there was a guy
who wanted to make a small web server. He got a Atmel AVR 8 pin micro
and dead bug hooked it up to an Intel box. At the time he was really
secretive about it. It was back in the days when speculation about
commercial prospects of the internet were running rampant. People were

talking about toasters with net connectivity so they could target market
  Toaster Popups to people who used their toasters every morning.

Similar and probably something to keep Bill happy.

http://d116.com/ace/

This guy used Linux with Slip to hook up a different micro controller.
On that page he instructions how he did it and has links to a few other
hackers. It looks like he got it down to one chip in the final schematic
with a voltage regulator.

But yeah. If it can be done with Linux it can be done with Windows.
Thing is my recollection of Linux and BSD were that they were inherently
set up for multi users. Simple as pressing <alt> and a number key to add
another user/process.

He handled everything in ~1000 bytes of code but I don't want to go to
that level. Specifically the Atari hooked up as a simple console via the
serial ports may work. Get my drift? If you have an Atari hooked up to a
Linux box then you can run Lynx<or any of the other text based web
server software> on the Linux box to connect the Atari to any where/any
place on the web. Of course it would be better to have the same console
running from Windows because of the availability but I don't know if it
has the ability to do things like Lynx or use the serial port for a
console. Seems like it should since you can hang things like keyboards
off the USB port.

 From what I understand SIO2PC with the Rverter drivers works fine as a
serial port device. If that level of sophistication is too much, you can
also run ~300 baud connection a with joystick hack and the MPP modem
drivers.

I'd like to keep it as simple as possible. More of a demonstration
project then anything else. I live in the boon docks so I'm still on
dialup => means I will have to purchase a Linux CD if I don't want to
download for 2 weeks.<grin>

So when do we get a stand-alone SIO2Ethernet or SIO2WiFi device?

Canonical might send you an Ubuntu disc for free, if you ask them.

Hey there!

Any 8 bit byters out there who have a game called 'An Evening of Horror"??

My friend wrote it in the 90s, and tried to sell it.......he sold exactly
ONE (1)!!! Copy!

Unfortunately, the Master discs were lost. I recall the guy who bought it (A
guy from Toronto, Ontario) was not the 'pirate' type. So, I hope that
somehow, someone did make a copy of it, and it got distributed.

Anyone got a copy? The original purchaser? Please distribute this game!

Greetings from Japan! From the former Sysop of 'System Reset! BBS'
Pro_Express Node 59.

Greetings to A.B.B.U.C. members Joost Kuep (I hope he is still around) and
Wolfgang Burger!

W. Moeller

So thinking a little more about what an SIO2Ethernet or SIO2WiFi would do...
I think a basic R: device could probably be sufficient enough.

The device itself could handle all of the TCP (and UDP?), and just looks like
another modem to the Atari. (Just as SIO2SD handles all of the SD device
and FAT filesystem management, and looks like a regular D: disk drive to
the Atari.)

Maybe you could 'dial' into IP addresses and ports. ATDT192.168.1.1:80 :)
Hostname lookups (via name server), and other setup (set IP address, set up
WiFi security, choose nameserver, etc.) could be handled via other
'modem commands'.

The idea is that a basic user could just fire up BobTerm or whatever
and use it to telnet to a shell server or one of the telnet-accessible
BBSes.

I suppose just looking at what tools like APE and Atari800 provide in terms
of R: support, and then providing all of that functionality (plus whatever's
needed to actually get ONTO a network -- stuff the PC running APE or Atari800
would already have) should be sufficient.

Later, more clever tools (like a basic text-based web browser --
something that does all of the host lookups and port 80 connections in
the background, and provides a UI for clicking links and entering data
into web forms) could be created.

The difficult thing would be encryption. (The SIO2xxx device could act
as a proxy, I suppose... you'd get plaintext between the Atari and
the device, over the SIO cable, but encryption between the SIO2xxx device
and the router or wireless access point (WAP).)

I, for one, would want SSH and HTTPS. :)

Mostly just dreaming... but heck, we've got SIO2SD and SIO2USB and
USB cartridges and all those other cool, clever stuff... Supporting the
Atari via tiny computers that are 200x as powerful makes a lot of cool
things possible.

(Or maybe I just need to buy a netbook ;))

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari SA of Lyon, France.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated)
Moderator: Kevin Savetz
comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

comp.sys.atari.programmer
Programming on the Atari computer.

Only one Copy sold???

I do recall a similar title, and think I have a copy of it in the
collection.

Back in the day, before the Net, I traded software with people all
over the world. It was really nice going to the Box and finding packages
full of floppies.8-)
Mostly games, and it was all good stuff.

I've never put any of it on the net. The Piracy Thing for one reason.
I'd like to do something with it of course, but don't need lawsuits.

If you have not found the game anywhere, then let me know and I'll open
the closely guarded archive treasure vault and see if it is there.

However, if only one copy sold, I will not release it without sometype of
agreement from the author.

This place says they have them new:

http://www.floppydisk.com/

and B & C Computervisions has them in bulk, but I don't
believe they are new. I just bought 100 3.5 disks like
this.

Hope this helps Barry! :)

Seen here:
  http://www.programmerfish.com/source-code-of-several-7800-games-released/

"Atari has unofficially released source code of over 15 games for the
coders and enthusiasts to admire the state-of-the-art (because this is
what it was back then)."

That page lists:

  * Robotron: 2084
  * Xevious
  * Dig Dug
  * Centipede
  * Joust
  * Ms. Pac-Man
  * Commando
  * Crossbow
  * Food Fight
  * Galaga
  * Hat Trick
  * Desert Falcon (aka Sphinx aka Nile Flyer)
  * Super Stunt Cycle (aka Motopsycho)

Plus links for:

  * 7800 Base OS (NTSC)
  * 7800 PAL OS
  * 7800 Development System (Atari ST)
  * 7800 Animation Tool (Atari ST)

Not sure if they're source or binary only. Also not sure what license
they're released under. I haven't downloaded any of it. (I'm not
an assembly programmer... I stick to Action! and BASIC on my Atari 8-bit.)

The files seem to be hosted at the 'programmerfish' server, so I'm not
sure whether the official 'home' for all of this stuff is supposed to
here, or if there's somewhere at an official Atari place that hosts it.

In any case... can someone port Galaga to the Atari 8-bit computer? ;)

They seem to come in commented source code, but no licence is included.
Unclear how "official" that is.

I jumped the gun! Sorry :(

It was a dumpster dive, and this stuff was originally posted over
at Atari History Museum last month:

  http://www.atarimuseum.com/videogames/consoles/7800/games/

Sadly, Slashdot picked up the post at Programmerfish (which is why,
suddenly, numerous friends started sending me that URL). I wasn't sure
I'd have time to dig around tonight, so posted that same URL here on
Usenet. (Even worse, they called it something nonsensical, like
"unofficial open source"... what the hell is that even supposed to mean?!)

Here's the news item about it at AHM:

  http://www.atarimuseum.com/whatsnew/2009-JUN-11.html

So yeah, utilize at your own risk. (However, since Curt at AHM is
involved, I wonder if something's being done to make this 'official,'
considering his work on the Atari Flashback 2. (And, presumably,
all the licensing that needed to be done to get games onto that system.)

Anyone know? (I should ping Curt over on Facebook :))

OK I just finished scanning an PDFing the Action Manual. I did this
for my personal use. However I am willing to share if any one wants it.

BUT. before I do...
I seem to remember some one buying the FTE rights a year or two ago?
and I also remember some one selling new Action! carts. I have googled
and not got any valid hits, so perhaps this in not available any more.

Has any one got any objections to me posting the PDF manual here?
(about 11 Meg).

Galaga has been available for the 8-bit for along time,
I know that some of the games for either the 5200 or 7800 were ported,
not sure which they came from, maybe both.

I don't recall Galaga being released for any Atari except the 7800.
I never heard that it was ported.

You're not thinking of Galaxian, are you?

Hello David,

What is the total file size of your PDFs?
I have been working on entering the ACTION! manual for my ACTION web
site but I won't be putting any copy online if the owners object.

I have recently put a copy of Larry Serflaten's 21-part ACTION!
tutorial on my site.
http://joyfulcoder.net/atari/action/

Thanks,
Eric

about 11MB

The scans I originally took were TIFF, I cut the file size down to half
by converting them to PNGs. I used the PNGs for make the PDF.

BTW Using JPEGS did no help file size, for clear quality they were
bigger than the TIFFs:(

Here's my comparison, with some backstory, a chart (with many values in

both '1982' and '2009' terms), and some photos.

  http://www.newbreedsoftware.com/bill/photos/atari1200xl_vs_dellinspiron1525/

I'm just continuing the tradition of stacking two pieces of hardware on
top of each other, and then photographing them and comparing their specs. :)
They just happen to have been born ~27 years apart.

No, I know both titles. Some of those games do tell from which system they
were ported when they load up. Without looking I don't remember from which
system they came. Both were originally coin-ops like Xevious was right?

Also, I think some were from the 2600.

That's because JPG is design for photos not scans of pages. You'd be better off
converting to GIF and reducing the colour count.

Heh. Hit slashdot today. Some folks think I may've gotten some of the
math wrong. Too busy to double-check now, but if anyone here notices
any errors, please feel free to send me corrections. ;)

I took the BBS down several years ago due to aging hardware. I am now using
an updated MIO with a new 18GB SCSI hard drive so the BBS has been reborn.

I have moved the old message bases to an archive format. There is 1 file
area open. I have ATASCII movies and online games.

Some of the text files are a bit out of whack but the BBS is up if you all
wish to check it out.

telnet to thecafe.dtdns.net 8888

You will need to create a new user as I have initialized the userlog.

Thanks!

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Ok, so I got an original model GP2X, a handheld game system (happens to be
Linux-based and very easy to do homebrew game development on), and one of
the first things I installed was Atari800.

I now have portable, in-my-hands "Yoomp!" and "Gem Drop." This is awesome. :)
(I've also got a breakout board that lets me connect to S-Video and audio
on my TV, but Atari800 seems to run in a mode that causes it to be squished
on TV-out. Looks fine on the LCD.)

Surprisingly, my SuperIRG flickery mode in Gem Drop looks pretty good
(esp. wehn Atari800 is in PAL mode).

Gamepark Holdings has a new model out, the GP2X Wiz, which is OLED and
touch-screen and includes a 500+MHz CPU and 3D acceleration. Looks like it's
only $180. (I paid $75 for the GP2X, including the breakout board,
a 2GB SD memory card, and a carrying couch. And it came with the original box.
No idea what it was all worth new.)

Entering text in Atari800 on the GP2X is finicky, but they've provided
a firebutton+arrow menu that appears on the left side of the screen to
let you tap things in. Since some games require random keypresses now
and then, this is a lot better than NO keyboard. I bet an onscreen keyboard
for the touch-screen model GP2Xs would be a lot easier to use, though.
(It'd also help if you had the option of pausing emulation until you figure
out the keypress. ;) "Gauntlet" (the space game) uses [X] to stop the ship.
So far, I've found it almost impossible to deal with. ;))

So how do you find the GP2X as a System?
what is the build quality like, battery life etc?

I was looking at buying one a few yeards ago now

I also think the system is a really good fit for a lynx emulator.

System seems solid. I haven't had it long enough to tell batt life.
(I'm also using an _old_ pair of NiMHs, which don't seem to last very long
in my digital camera.)

> I was looking at buying one a few yeards ago now

The next model (F200?) looks like it does touch-screen.
The latest model (Wiz) is touch-screen, OLED (!!!), 3D accel'd and has
a much faster CPU. And then there's the OpenPandora.
Beggars can't be choosers, though. ;)

> I also think the system is a really good fit for a lynx emulator.

There is a Lynx emulator, but I haven't tried it. Only the Stella and
Atari800 ports. (The latter is a bit different from the Atari800 I'm
used to on a Linux desktop/laptop, though... what with the D-Pad-controlled
keyboard entry menu. I don't use Stella enough to tell how diff. it is.)

Gotta run,

-bill!

A while back, there was a real mess with a SDX cartridge that was
splattered for everyone to see.

Just for the record, that cartridge was sent back to the person who claimed
it by US Insured Mail. The Post Mark on the Receipt that I hold in my hand
is OCT. 08, 2008. The Cartridge was returned in working condition.
I never received a receipt for the signature of the package.

To this Date, which is July 11, 2009. I have not had any e-mail, snail mail
or
Posting that the cartridge arrived.

I did my part.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the

home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Atari SA of Lyon, France.

Anyone have any of the above items with cases still in good condition? I
don't need the units to be functional, because I simply intend to use the
cases to house other projects. If you have anything you're looking to dump,
please drop me a line by reversing each segment of my public email address.

thanks

<drumroll please>

And we have a winner!

Reefer is the winner of our April 2009 prize giveaway.

Congratulations!

We use a small ST application called winner that randomly
picks a name from a list (text file). A script on DarkForce
records callers to this list during that month. So the more
a person calls, the greater their chances of winning. Its not
guaranteed though - but in this particular case, the program
did pick that one. Reefer called 32 times. :)

I'd like to thank everyone who did call - we saw a massive surge
this last month, over 225 calls!

Don't forget to check back in occasionally - we give away prizes
all year long. :)

The bigger question is why are you here? I bought a C64. Owned it for a few
months and then gave it away. True, it does play games really well (the XE
system is just as good), but it is not a good computer. Ask any computer
expert to look at the two and they will tell you that the C64 is just a hack
and that the good is a true computer. Plus trying to enter things into the
C64 is just so clumbersome. I will stick with my Atari.

Because we are smarter than Atari users in that we know to trim the troll's
newsgroup before replying...

So, "the good is a true computer"? Where can I find a "good"?

The same place you find a computer expert... in comp.sys.cbm. I am a computer expert and I do not believe the PET, VIC20, C64, C128 or AMIGA and other cbm machines are hacks any more than I believe that Jack Tramiel is a hacker except in the nicest way. I am also an authority on Apple II's and IBM-PC's and have been making my living by being a computer expert since shortly after the C64 was introduced.

I think what the OP meant was "Ask a hack to look at the two and they will just tell you anything. Any true computer expert will tell you the C64 is good."

"Edward S. Baiz Jr." <edbaizjr@comcast.net> wrote:

>Plus trying to enter things into the C64 is just so clumbersome.

How could you possibly remember? You gave yours away long ago.

What kind of things I wonder... if you are talking about entering BASIC programs into a C64, my daughter was keying-in her own into her C64 when she was 6 years old unassisted by anyone, and she also used a real 4.77 MHZ IBM-PC and MS-DOS with the same proficiency and joy. She is a psychologist now specializing in personalities and statistics as well as a computer expert.

The last time we talked about the old computers and the new computers which was recently it was all good for both of us although she is not preoccupied with collecting old commodores and apples as I am.

Glad you like your Atari.

Bill

(Top post here.)
All hail Jack Tramiel
All hail Nolan Bushnell
All hail (enter C64 engineer here)
All hail Jay Miner (Atari engineer)
I don't know what the hail.
Both are fantastic machines.
I just don't have any more room for
junk, so I don't collect more than
one.
I still am amazed by the machine
and learn new things 26 years after
my first purchase.
The Coleco Adam was my first purchase.
After three smokers on first startup
I returned the Adams and took my
son's advice and bought the Atari.
I haven't been sorry since.
My understanding of the Atari helps
me be facile with a PC.
Hardware people keep coming up with
new items that help keep them alive.
Atari can have a cart that allows
use of a SD card! I'm sure there's
comparable new hardware for the C=64.
Apples were, and still are, for more
uppity people. Oh, all hail Steve
Jobs and Wozniac.
(Darn, I promised myself not to
feed the troll.)

> the C64 is just a hack

So are all the computers of that era. With irrealistic deadlines,
without factory standards (for the low-price segment of the market)
and without the possibility to fix early software/hardware problems
with just a firmware update over the Internet, it seems incredible to
me that these computers work(ed) at all. This only proves the
competence of the engineers that developed them.

True. But it was a different time. Internet was not available for the
masses and so these computers not designed for a firmware update. Though
it was possible to burn a different firmware on an eprom.

As I have to soldering skills a friend did this for me in about 1987 for
my C64, and I had the original, and a customized firmware, including turbo
loader for floppy and tape on a second PROM and a switch (drilled a hole
into the chassis) so I could "boot" one of them at a time.

The Amiga (1000) then came with the firmware on floppy (Kickstart) so
bugs were fixed and functions added. Still no internet for regular people
available. But you could get the floppies from a store (or friends, along
with other cracked programs :-).

BBS were around already, and few people also had modems or those acoustic
couplers and I'm sure you could also download firmware there.

F'up2 comp.sys.cbm.

I miss those good old days. (Well, not really, my 800XL is hooked up
to my big TV in the living room, and when modern PCs start to piss me off
too much, I fire up a nice game of Pac-Man or Dig-Dug :))

> --
> Ryan 'Gozar' Collins

There is no high-speed SIO driver within MyDos. However there are
several high-speed SIO patches and other operating systems that have
SIO built-in drivers. APE Warp, High-Speed Patch (driver from
Sparta), etc.

A very fast and quite compatible patch is from Hiasoft:
http://www.horus.com/~hias/atari/

You might find the background info interesting at AtariAge:
http://www.atariage.com/forums/index.php?showtopic=3D139077&hl=3D

I've been able to get SIO of 127Kbs using APE USB with MyDos and Hias'
alternate high-speed patch, although as a practical matter, the actual
transfer throughput is essentially no better than at 74 Kbs. Of
course, you can't get that fast on a real Atari floppy drive, but on
APE or the new SIO solid state devices (SIO2SD, S-Drive, etc.) you
can.

Don't waste your time looking for a "good". Look for a "best" instead. The best is much better than the good.

What else can I add to the confusion created by someone replying to a 2 week old troll?

Although better is better than good, best is better than better. By all
means, best is the very best!

Except, the only one that might be better than the "best" is the "excellent"
for what can be better than excellent?

If anyone is not confused yet, I will replace the batteries in my thesaurus
and return shortly to take the confusion level to the highest level
attainable by mere mortals.

> TurboBasic is rather convincing, and rather popular in Europe - you get it
> for free.

You can get almost any Atari software for free, but legally, Turbo-Basic
XL is not freeware and only may be legally used by (former) owners of
one of the three Happy-Computer magazine issues (one regular, 2 special
Atari issues) where it was printed
<http://www.kultboy.com/magazin/820/>,
<http://www.tmeyer.de/atari/hc-xl-1.jpg>, and the compiler may only be
legally used by those who owned the second special Atari issue of
"Happy-Computer" <http://www.kultboy.com/magazin/2754/> which also
contained the third reprint of the interpreter or bought the original
magazine disks (like I did). Yet the publisher never persecuted
copyright infringements and of course it is hard to tell nowadays who
typed in the files back in 1985/1986 and who only owns a copy.

Thorsten

Posting-Frequency: 10 days
Last-modified: April 9, 2009

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of

Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

The chip sockets came in today and I soldered it up. The unit turns on
to a small square prompt for a few seconds and then a ready message
comes up, keyboard works. On the 65xe was there supposed to be a logo
for atari on the screen at startup or a free memory text like in a
C64? Also is the ROM slot known to be picky (some carts needed
reseated a couple times to come up)?

The pause before READY comes up is it trying to find a floppy drive to
boot from. (It makes a clicking noise.)

> On the 65xe was there supposed to be a logo
> for atari on the screen at startup or a free memory text like in a
> C64?

Nah, just READY. On the 1200XL, if you booted without any cartridge or
disk (it didn't have built-in BASIC like the other XLs and the XEs),
you'd get a big rainbow "ATARI". Press HELP to get to the system test

screen.

On the other XLs and XEs, disable BASIC by holding OPTION while you turn
the system on (or type "BYE" and hit RETURN in BASIC), and you'll go
directly to the system test screen.

Good luck,

Michael Current wrote:

>   Atari BBS List (Trevor Holyoak)
>   http://www.atariplanet.info/ATARIBBS.TXT

My domain name (atariplanet.info) apparently expired without me
realizing it, and it turns out that just today someone else snatched it
up. :(

So, my Atari web site is now only accessible at either of these addresses:

http://www.holyoak.com/atari
http://atari.holyoak.com

And the BBS list would be available at:
http://www.holyoak.com/atari/ATARIBBS.TXT
or http://atari.holyoak.com/ATARIBBS.TXT

Unfortunately, I'm afraid it's linked to the old address from a lot of
different places. What a mess. :(

Thanks,
Trevor

Perhaps in some alternate time-line, the world runs CP/M GEM 2009 on
the latest Commodore B series derivatives purchased at Service
Merchandise and Gold Triangle. Anyone willing to jump into a black
hole and find out for sure?

Not at work which means not in the home. To much infrastructure to
change. If the VP in charge of IT is familiar with Windows and Windows
applications<which at this stage is just about a sure thing> you can bet
they won't go for anything different.

The 32 and 64 bit CPUs well be here in devices. I have a Chinese
[camera, DVR, NES emulator, MP3, MP4, FM radio, USB drive] that runs on
something like a 200 MHz ARM 32 bit processor. You probably have a
couple of similar power processors in your cell phone or GPS.

TurboBasic XL can be easily persuaded to move it low-memory pointer higher.
It requires running a short program first, which then will run the program

that will
execute after the memory pointer is changed.

I used this technique to place device handlers in lo-memory. It also
worked well
for a customized version of Dos 2.5 that allowed me to use 1mb of extra ram
as a
RamDisk and other storage space.

All that would be required is the address range that would be needed to
"house"
S.A.M. .

2 If you still have a PC with serial ports, go for a SIO2PC cable.
Takes about an hour to put one together and you will only need a real
drive for copy protected programs if you can't find cracked ones.

You only need some flavor of 1489, one diode, and plugs to go in the
Atari and PC. You can find 1489s cheap or salvage one from just about
anything PC that has serial on it. Some people even build them into
their Atari and just bring out a 9 pin serial cable to the PC.

Okay, lets see, what was in like in the Alternate Earth 3166823094-34

Ah, I see.

It appears Atari wasn't stupid enough to let the Amiga Stuff go, so
it's Atari Amiga Line of Gaming Computers.
IBM blundered. Apparently they figured it was best to Copyright and
use some sort of primitive encryption on their PC Bios. Their first
OS, PCDos was an internal project. They were going to hire the Basic
Language maker, Microsoft, but when they found out their were buying
the rights to Quick and Dirty OS, they decided to cut the middleman
out. IBM and Apple joined forces to crush the Business Computer Market
with their Gala Business Machines (GBM).
Meanwhile, Commodore, seeing as the're gaming machines ended up
failures (internal problems, never could get their act together,
thought they'd live off of C64 profits forever, oh wait, that could be
our time line), and no one in america really considers them to have
"business machines", they decided to join forces with Intel, and SGI
to bring a new generation of computing to the massess.

Sun was unable to compete on the hardware market against IBM/Apple, so
they quietly faded out of the picture.

AMD and Nvidia joined forces to make chipsets and GPU's for various
machines. Motoralla got bought up by AMD/Nvidia, and they started
producing the PowerPC cpu.

Okay, we are running basicly unix on our Commodore currently. SGI
and Intel conviced Commodore that running the OS Open Source would be
the best way to get market share. Sell the hardware and the
services, not the software.

GBM is running GBMdows (nicked named GBM Blows) a closed source OS.

well, I would have more for ya, but I have an eq2 raid in just a bit,
and I meant to run to the store before. But this was fun. lol

I have a XE1541 cable for my C64 to make real floppies from images I
figured I would do the same for the Atari. Hopefully original software
will be about as easy to find as C64 software (and I do have a TOSEC
archive of the Atari).

You can pretty much find any disk image you want online but I prefer
to play original games on real hardware.

Introducing the Intel=AE Core=992 Quad processor for desktop PCs, designed
to handle massive compute and visualization workloads enabled by
powerful multi-core technology. Providing all the bandwidth you need
for next-generation highly-threaded applications, the latest four-core
Intel Core 2 Quad processors are built on 45nm Intel=AE Core=99
microarchitecture enabling faster, cooler, and quieter desktop PC and
workstation experiences.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

I've been curious for a while about whether the prices you publish
already have the 20% taken off?

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

I prefer FTe/SpartaDOS. Have you seen/tried
CC65 'C' for the Atari 8-bit?
I haven't tried it, but it looks good.
You may be able to find it at:

http://ftp.pigwa.net/stuff/collections/holmes%20cd/Holmes%202/Programming/
index.html

If that wraps on you, goto ftp.pigwa.net
then stuff
then collections
then holmes
then programming.
then C

I am looking for MYDOS 4.53 for 130XE. I do not want the ramdisk.128K ram is
useful for one or two pass duplicate disk and files. or disk / file copier
supports 128K or more. Any idea?

Thanks!
Jack

That one probably wraps. You'll find mydos453.atr
there. I don't know what you're talking mydos453 for
130xe, I believe there is only one mydos453.
I'll try to see if it wraps. It is a bit complicated URL.

Oh man, too bad I don't use floppies any more. :)

That Icontroller looks tempting, but perhaps not for $35. :^(

It depends on the computer and what you do with it. If you have an expanded
memory XL/XE computer and/or a USD1050 then Sparta DOS is definately the way
to go.

Stock 800/400 computer and drives would make MyDOS the best option.

I loved the features of SD for running a BBS but when programming a ramdisk
meant a lot of crashes and lost time.

I used Lightspeed C for a little while on the Atari. C on the Atari is just OK but still isn't enough of a speed up to be a killer ap. The Atari doesn't hve the {} keys so you have to use $[ ]$ or something like that. It bothered me enough to use Speedscript which had the {} and IIRC Lightspeed which could use them.

I'm with Russ here; creation of the RAMdisk depends on the contents of your boot disk; ie how you were configured (option 'O') when you wrote (option 'H')
the DOS files to it. I do not have an XE, but the expanded XL can boot either
with or without the RAMdisk using MyDos 4.53/4.

WarGames is one of my favorite movies also. I have it on laserdisc. :)

They finally made sort of a sequel, called WarGames: The Dead Code. It

is a similar story, but updated to today's technology. Professor Falken
and the WOPR make appearances in it. It's not as good as the original,
but is entertaining to watch once.

Hey, my daughter actually caught one when we were playing last night!
That's the first time I've ever seen the resulting screen. One question
I have is do you have to press the joystick button, or just land on him
at just the right time?

Thanks,
Trevor

I am looking for MyDOS 128K that one or two pass duplicate disk. For
example, MSDOS copies one pass whole 1.44MB disks, use extended memory.
MyDOS copies one pass whole 90K disk, use 128K extended memory.

Like Commodore 64 with 1764 REU, adding 256K expended memory. Disk copy
program uses the REU to copy the whole disk in single drive.

I don't know if MyDOS 4.53/4 uses extended RAM or
not. You may be talking about a third party copy
disk program, which I don't know about.
There's a lot I don't know about, so maybe someone
else can set me straight.

That's is one of the things that make me give the edge to Sparta. No facts just impression that there are a lot more Rambo memory expansions then Newell. I had at least one each in my systems and I remember the problems they gave me at first. I had to edit the MyDOS ramdisk handler to work with Rambo banking and it took a while before ICD came out with RD.COM that could handle the Newell. I think Tim Patrick wrote a ramdisk handler that could check anything and everything but I don't know if it was Atari DOS only or if it can handle MyDOS.

If Jack is using dup disk then a 3rd party one would be a good choice if he can find one that uses expanded memory. I'm pretty sure at least some ignored unused sectors for quicker copies. If it is just files then he is better off doing wildcard copies to get the files unified.

Xref: g2news1.google.com comp.sys.atari.8bit:994

I recently got hold of an Atari 400. There seems to be a problem with
the joystick ports which are unresponsive except for firing.

I've tried two different Atari joysticks which I know are wroking fine
- neither casue any movement in different games, but the fire buttons
work fine. I even cleaned the contacts inside the joystick as well as
in the 9-pin connector,

I tried running a basic program to read each of the ports and joystick
buttons (i.e., "10 print stick(X), strig(X): goto 10"

The results: Stick(0) gives mostly "3" with an occasional 13, 6, 8,
0, and 10 thrown in. No change when stick is moved or even removed,
nor when pins 1 through 4 are connected with a short jumper wire to
ground.   Again, pressing the joystick button works.

Stick (1) is similar to stick(0), mostly "13" witrh 0, 2, 8, and 6
appearing occasionally.   Joystick button works.

Stick(2) Gives only the number 3. Joystick button works.

Stick(3) Gives only the number "13". Joystick button works,

Again, grounding any of the directional pins does not affect the
result of stick(X).

I then tried measuring the DC voltage at each of the pins on the
computer ports when connected to ground.

Stick(0) Pin 1: 341 mV   Stick(1) Pin 1: 340 mV   Stick (2)
Pin 1: 4.8 V   Stick(3) Pin 1: 4.8 V
             Pin 2: 340 mV   Pin 2: 339

```
mV                    Pin 2: 4.8 V                  Pin 2 4.8 V
             Pin 3:  342 mV                     Pin 3: 342
mV                    Pin 3 4.8 V                   Pin 3: 4.8 V
             Pin 4   302 mV                     Pin 4: 342
mV                    Pin 4: 4.8 V                  Pin 4: 4.8 V
             Pin 5:  68  mV                     Pin  5:  59
mV                    Pin 5: 4.3 V                   Pin 5: 4.8 V
             Pin 6   4.87 V                      Pin 6: 4.79
V                      Pin 6 4.8 V                   Pin 6:  4.3 V
             Pin 9   67 mV                      Pin 9:  28
mV                    Pin 9: 64 mV                  Pin 9:  67 mV
```

Shorting pin 7 (the +5 V supply) to ground causes a cold start of the computer.

I know the pins that are supposed to be "on" should be arounnd 5V, and the ones that are off should be around 60 mV......So it seems to me that something is definitely wrong with the first two ports on the computer, although why the other two are also unrespoonsive, even when a pin is shorted to ground is beyond me.   The only reaction I get is shorting pin 6, which causes STRIG(X) to read 0.

Before I starrt poking around inside the computer, does anyone have any suggestions? Has anyone run into this problem before?

I appreciate everyones input!

Michael

<snip>

Very rare for the 6520 to fail, I have only seen one go bad in the last 25
years, but I think that may be your problem. I would have a replacement on
hand before I tore into the computer. Get either the 6520 or 6820 and the
CMOS versions of both chips would be OK too. It could be the existing chip
may just need to be reseated but 68C20s are only about $2.

One way of checking to see if it is the connector instead of the 6520 would
be to test the JS fire button. The fire button is controlled by the GTIA so
if those buttons work it probably isn't a broken connector.

Yes, the joystick fire button works for all four ports. That's why
I'm so puzzled.   I will check to see if the 6520 is seated
correctly.   If the chip itself is bad, what other symptoms should I
be looking for?

I would like to buy both WarGames and Cloak & Dagger on DVD! Cloak & Dagger!
A perfect advertisement for Atari DealerShips! I believe I spotted an Actor
named John Forsythe in one of his first roles working at the Atari Dealership
and his Dead Body stowed in the Trunk of a car with Henry Thomas playing Davey
Osborne! John Forsythe also played in Con Air & starred in "The Untouchables"
series playing Al Capone! I think made in the 1990s! I loved Dabney Coleman in
his Dual Role as the Father and as Jack Flash the RPG Character! =-=Ben=-=

1st - Star Raiders, Why I bought my 1st Atari Computer, a 600xl!

2nd - Star Trek by Sega is very Good. I love it when I Destroy Nomad! I'm
missing the Manual, Box and the Joystick overlay!

I had Star Fleet 1 for my 800xl but I prefer it on my ST! I can completely
control it on my ST's Numeric KeyPad! I wrote a review years ago! I'm good!

3rd - Silent Service is the 1st Commercial Disk Game I bought and my 1st Disk
Drive was a Brand New In the Box 1050! Before Silent Service I played
Submarine Commander on Cartridge by EMI Thorne Video from Kay Bee Toy
& Hobby! My 3rd choice is Silent Service!

BTW, I love Simulators especially by MicroProse like Silent Service!

4th - I Love most LucasFilm Games like Eidolon, Koronis Rift, BallBlazer &
Rescue on Fractulus! I love Games that use Fractal Math Like Silent
Service & Rescue on Fractalus! My 4th Choice is Rescue on Fractalus!

5th - I Love many XE Game Cartridges, especially because Atari repackaged
good games some formally on Disk! My 5th Choice is Star Raiders II!

6th - I know were only picking 5 but my 6th is Final Legacy by Atari! The
Box says it's 3 Games in 1 and it's a simple way to Relax!

7th - One of my favourite Movies is War Games with Matthew Broderick and
Ally Sheedy! I still have my VHS copy! I dont have it for the Atari
by Coleco but I have EMI Thorne Video's release of Computer War. I
love that the Tic Tac Toe is worked in!My 7th Game is Computer War!

I prefer Simple Games to help me relax! The more complicated work the more
needed simplicity of play! Paraphrased from Captain Kirk on the Pleasure Planet
on Shore Leave! I prefer an older familiar game over a new game to keep it
simple, not learn a complicated new game with a big, thick manual! My 1st game
is Star Raiders! I loved reading the Manual mainly because it spun a story
which helped me get into the Fantasy of the story & prepared me so I could
Play! "Do you want to play a game?" Quoted from War Games!

Yes, the joystick fire button works for all four ports. That's why
I'm so puzzled.   I will check to see if the 6520 is seated
correctly.   If the chip itself is bad, what other symptoms should I
be looking for?
****

Not much else to check on an Atari 400. You already did the voltage checks
and they were out of specs. You showed it wasn't the connector so it has to
be the chip. Time to replace the 6520 IMO. BTW: I hope when you shorted the
chip power pin to ground it was an accident.

Rick

I tried reseating the 6520 but that didn't help. I'm ordering a new
one today. I'll let you know what happens when I install it. Thanks
for you help!

Michael

Both movies are available on DVD, and Cloak and Dagger is available on
Netflix Instant Watch as well. :)

Indeed! Thanks for sharing! Sorry I scaled them down to 400-wide instead
of 640-wide. Force of habit from the huge collection of Linux User Group

photos I've been posting for ages.

Thx again!

The list is endless really, but for a start:

Ultima 1-4
Star Raiders
Tempest Extreme
Alternate Reality series
PacMan
Castle Wolfenstein and sequel
Ball Blazer
Resue on Fractalus
Ms. Pacan

You can buy them both from Amazon.com.

Netflix Instant Watch is also available on a $100 box from Roku that
connects to your TV, as well as Tivo, XBox 360, etc. - so a PC or Mac
are not necessary. But I wouldn't go through all that trouble and
expense unless you wanted to watch more than just the one movie
(although WarGames: The Dead Code is also available that way). ;)

Actually, you control which movies go into your Instant Watch queue via
the Netflix website, so web access _is_ required.

Now, of course, Web access isn't impossible on an Atari 8-bit, if the
site is compatible with a text-based browser like Lynx (or the more
modern Links). 80 column terminal software with VT capabilities
(like IceT or FlickerTerm80 on the Atair) are likely required...
and, obviously, a box somewhere connected to the internet that you
can run Links on.

(I actually check my email on my DSL provider's shell -- where I also go
in and manage my website by hand-editing my PHP scripts and HTML :) -- and
can browse the web using Links there. I could almost certainly dial into
one of their dialup lines via my Atari 800XL, if I still had a modem.
I'm guessing that's more-or-less what Ben does to check his email and
Usenet, but I'm only guessing. If he's connected to a Linux or Unix shell,
then Lynx or Links is almost certainly available!)

And guess what!? I just fired up "links http://www.newflix.com/" on my laptop (which happens to run Linux), and have an ugly, but apparently navigable, view of my Netflix account!

And hey, there's my queue! :) I wonder if it works. (I know the Netflix site is heavily Ajax-based, meaning it uses DHTML tricks and JavaScript to talk to their server without actually going to a new page... e.g., for giving a DVD a particular rating, or re-arranging your queue.)

... Hey cool! I just moved: "Mystery Science Theatre 3000: Teenagers from Outer Space" from the 2nd to first queue position using the "^" button. Netflix might actually be relatively usable via a text-only browser! :)

Heh, I've got some other Bob Woolley & his Magical 1200XLs shots from
one of the times I went to Vintage Computer Festival.

  http://www.newbreedsoftware.com/bill/photos/vcf60/img_2064.jpg
(hey! Same Pac-Man shirt :) ... and that's our friend Ben Corr on the right,
making a funny face ;))

And the rest (a punch of Bob's hand pointing at the insides of his
1200XLs) are here, of course:

  http://www.newbreedsoftware.com/bill/photos/vcf60/

Enjoy! :)

(Oh, I also went to some other VCF shows... replace "vcf60" with "vcf70"
and "vcf80". It doens't look like Bob made either of those.)

Bingo! It was the PIA chip. Thanks for the help RIck!

Michael
******

My pleasure. It was your throughness in testing that made 'guessimate
diagnosis' possible. Kind of wish everyone could do that good a job!

Rick

You won't find any MyDOS versions that do what you want with full
disks to duplicate. One or two pass duplications can only happen with
basically empty disks with standard MyDOS and there are no "super"
versions that magically used extended memory without regard to
possible ramdisk data. You will have to write it yourself or use a
third part app that does exactly that - I don't know of any. Except
perhaps copymate, didn't they have an extended memory version?

Exactly, you cannot do a single pass "J" Duplicate disk" for boot disks
and those with system files or hidden data; you can only do a "*.*"
wild card file copy into and then back out of the RamDisk in one pass
each way. And, yes, Copymate did have a version or maybe just a
configuration for the 130XE that utilized all of the RAM for single pass
copies of SSSD 720 sector floppies.

I have used an extended memory sector copier (which also uses high speed
routines e.g. when used with my Speedy enhanced drive and SIO2SD)
lately, and this one was written in 1988: the "SECTORCOPY 1.5" off the
Speedy System Disk (you will find a Polish language stand-alone version
at atarionline.pl)

IBTD here. For use with disk drives I prefer Stefan Dorndorfs XDOS (a
late heir of the great OS/A+ by OSS), and I only use MyDOS/MyPicoDOS for
larger disk images on my SIO2SD.

I have yet to use SpartaDOS, though, but have been told it is very good.

Yeah, it was the actual movie viewing part that I thought he was worried
about. I believe you can even adjust your queue with a cell phone.

Oh yeah, duh. He'd need broadband (or a neighbor willing to share some
wireless broadband), which I somehow doubt he has, if he hasn't got a
modern PC or Mac connecting to the Internet.

Why do you people still use ATARI 800 computers???

The C64 is far superior, it has 8 real sprites, better scrolling
and a real sound-synthesizer chip, the SID.

Why did anybody buy the inferior ATARI 800???

The ATARI 800 is crap, when it's compared to the C64.

Why don't you throw away your ATARI???

I have a 65XE that turns on (red power light is on) but has a dark red
video out (using both the TV out and video out) with no text.

Any idea what is wrong?

If we did, then you'd go dumpster diving for a free Atari. Nice try.
If you want an Atari that bad, there's always eBay!

Maybe because I want to play a proper version of M.U.L.E., Rescue on
Fractalus, Ballblazer and a bunch of others ... Dropzone was not better on
the C64 ... The explosions in the Atari version is beautiful. I have C64
too, but Atari's have soul ...

I'd take anything so long as it's up to the task. And depending on what

I'm doing, that could be just about any 8-bitter.

For some things the better machine is the Atari 800, for some things the
C64, and for some things the Apple][.

(Though, imho, the VIC-20 might have been a good game system for its day,
and certainly it stomped the Atari 2600 flat, but as a computer, it was a
joke.)

Hey!

The VIC-20 was a MAJOR step up from my first computer ... a home-built
8008 machine with 128 BYTES of RAM that used a paper TTY and punchtape
for I/O.

I learned to code writing programs that did multiplication and long
division while showing all of the work on screen. ;) Made homework easy.

(It was also the only machine I've ever destroyed through software alone
-- was trying to write out Morse Code practice tapes and figured I'd just
toggle the data-write line of the cassette port. No smoke, but it quit
working.)

Also learned 6502 assembly on that machine.

That said, the Atari 800XL quickly became my second love and getting used
to "Atari Strings" set me up quite nicely for doing weird things in C.

When I hit high school the Atari became my 'graphing calculator' for
calculus.

How'd you fit *all* of the work on that tiny screen?
Oh, never mind. I see the ";)" now...

If you get a any screen => boot went as far as initializing hardware that
far. While it could be something else, usually it means that ROM, 6502,
GTIA, and POKEY are OK. Swap RAM chips if you can as a first try. There are
other things that can go wrong like if you have a Rockwell 6502 made in
Mexico they fail when they heat up or sooner if you are unlucky.

Rick

Hey ... it was 3rd and 4th grade homework ... didn't take a lot of space.

Hardest part was keeping track of the decimal point. Ended up using
inverse video to mark the decimal part.

Do they play nice, or do they interfere?

I'd like to write some simply little games for my 2yo son to play on
the Atari, and speech would be nice (even if it is a bit robotic...
I mean, he DOES love robots :))

I guess I can go try. ;)

I brought an 800 up out of the basement a few days ago, and have been
playing games on it with my kids. It's kind of like Christmas for them,
as I haven't had a system set up and going since my oldest was a toddler
(she's now 12).

I'm unable to find all my disks, and can't find the sio2pc interface
that I built 10 or so years ago, so I'm doing what I can with the disks
I can find while I wait for the sio2sd interface that I ordered
yesterday to arrive.

Anyway, I'm wondering what games were made that will allow up to 4
players? These are the ones I'm aware of:

M.U.L.E.
Party Quiz
Dandy

Any others?

Thanks,
Trevor

The ATARI had the better graphics. Well AFAIK 256 colors instead of the
16 of a C64. You cannot do <http://www.youtube.com/watch?v=3De-ZbgXolZQs>
with a C64... Well after seeing this video, I thought it looked way
better when I saw it on an ATARI back then. Looks like the C64 could do
that too now

> Why did anybody buy the inferior ATARI 800???

I guess it's that you buy what your best friend already has. If he has
his new ATARI and shows you what it can do, and none of the other guys
you know have a C64, you won't buy a C64 then.

> The ATARI 800 is crap, when it's compared to the C64.
>
> Why don't you throw away your ATARI???

Coz you came and picked it up. ;-)

F'up alt.0d (no one reads there).

There were two games that a couple of friends had that I liked on the
C64 that weren't available on the Atari, but that was the only thing the
C64 ever had going for it... ;)

- Trevor

Subject: 8.3) What games support 4 or more simultaneous players?

Contributors to this section: Jeff M Lodoen, Vidar \"Hawk\" Olavesen, Pat Mulvey, Steven E. Posey (Party Quiz), Andreas Koch, Florian Dingler, Matthias, Jason Harmon, Cathryn Mataga, Andreas Koch again 2008.06.10

a) The following games support 3 simultaneous players:
    (2 players via joystick, 1 player via keyboard)

- Dynakillers full-version by GMG/Slovakia (Freeware!)
- Blastermind by Numbercruncher/Germany (Freeware!)
- M.U.L.E. cracked+changed by CSS/Germany (pirate copy!)
- Achtung Panza ! (from 6502 compo)
- some more PD and commercial games...

Arek Jezowski writes (16 Apr 2007):
- M.U.L.E. supports three players on two port joystick machines (800xl, 65xe etc).
    the game goes like this:
      - joystick in first port
      - two paddles in second port
    then:
      - button confirming, land grant phase, auctions - each player is using of its controller
      - phase that require movement (pub, mule deployment etc.) joystick is passed between players on its turns

b) The following games support 4-joystick head-to-head play:
    (Only the 400 and 800 computer models have 4 controller ports)

- Ali Baba and the Forty Thieves by Quality Software
- Aliens a PD-game by ??? using an altered Dandy program
  (the Dandy font and thus the graphics were changed, however, the levels remain the same and can be used in both games);
- Asteroids cart. by Atari,
- Basketball cart. by Atari,
- Battle Room (CIA vs. KGB) a PD game by SNACC
- Dandy disk by APX,
- Depth Warrior by ??? from ROM magazine, Aug. 1984 ***
- Floyd of the Jungle
- Major League Soccer cart. by Thorn EMI,
- Major League Hockey cart. by Thorn EMI,
- Soccer by Gamma Software

- Hockey by Gamma Software
- Maze War disk or cart. by ???,
- M.U.L.E. disk by Electronic Arts,
- Roadblock by Brian Holness from Compute! magazine
- Silicon Warrior disk or tape by Epyx,
- Sky Warrior by ??? from ROM magazine, June 1984 ***
- Survivor disk or cart. by Synapse,
- Tank Battle by Fred Pinho from Antic magazine:
  http://www.atarimagazines.com/v3n2/animate.html
- Volleyball by ??? (PD game written in Atari BASIC);
- Yellow-Brick-Road by ??? from ROM magazine, Feb. 1984 ***

*** these programs are reported to be 4-player programs, I'm
    not sure if they are meant to be 4-players simultaneously
    or 4-players - one after another (try to find out!);

c) The following games support 8 players on the 400/800 or 4 on the other computer models, using the 2 controllers-per-port CX30 Paddle controllers:

- Super Breakout by Atari,
- Worms? by Electronic Arts
  (a "life" like sim., has nothing to do with the PC game!)

d) The following game supports 4 players on all machines, using special 4-button keypad controllers linked together with RJ-11 jacks (standard phone jacks) to a box with 2 joystick port connectors:

- PQ: The Party Quiz Game by Suncom

e) The following programs support multi-joystick games, using extra
    hardware called Quadrotron (from the German Atari Magazin 2/1989):

- test program for 4 joysticks (and assembler source);
- Quadro-Tron by H.Schoenfeld (4-player Tron-clone);

f) The following programs support multi-joystick games, using extra
    hardware called Multijoy (multijoy4 for up to 4 players, multijoy8
    for up to 8 players and multijoy16 for up to 16 players; originally
    developed by Raster/Radek Sterba, but also available from ABBUC):

- Astro4Road by Fandal
- Bremspunkt (demo-version) by T. Butschke
- Bremspunkt (full-version) by T. Butschke
- Card Grabber by F. Dingler
- Cervi by R.Sterba
- Cervi 2 by R. Sterba
- Fujirun by Schmutzpuppe (see below!)
- Hardwaretester/Peripheral Test 2.0 by Florian Dingler, 2008
- Icehockey by F. Dingler
- Multijoy-tester by Fandal or Raster
- Multris by R.Sterba
- Quadrotron-M4 by R. Sterba
- Sheep-Race by F.Dingler

- Shot'em All by R.Sterba

The following patches are available at:
http://mitglied.lycos.de/gunnarbusse/bajamar/download.htm
- Asteroids, modified for Multijoy by Schmutzpuppe
- Basketball, modified for Multijoy by Schmutzpuppe
- Tennis, modified for Multijoy by Schmutzpuppe
- Dandy, modified for Multijoy by Schmutzpuppe
- M.U.L.E., modified for Multijoy by Schmutzpuppe

And the following patches are available at:
www.atari.fandal.cz
- Wingman modified for Multijoy by Fandal
- (Thorn EMI) Hockey modified for Multijoy by Fandal
- (Thorn EMI) Soccer modified for Multijoy by Fandal
- (Gamma) Hockey modified for Multijoy by Fandal
- (Gamma) Soccer modified for Multijoy by Fandal
- Battle Room modified for Multijoy by Fandal
- Silicon Warrior by Epyx modified for Multijoy by Fandal
- Mazewar modified for Multijoy by Fandal
- Survivor modified for Multijoy by Fandal
- Floyd of the Jungle modified for Multijoy by Fandal

The Kenbak wasn't an 80xx machine; it had a custom TTL CPU. Most
likely he's talking about one of the various S100 systems back in the
mid-late 70s.

Know of any place I can get a set of RAM cheaply?
****

If you are in a hurry, old MSDOS XT type mother boards, memory boards, or
video cards can work.. IIRC you can even plug in 256k X 1 chips and they
will function as if they are 64k X 1.

If you don't have a surplus store or recycling store near you, I probably
have some 64k X 1 left over from upgrading XL computers to 256k.

Usually one working chip is enough. You just substitute it one position at a
time until the computer boots.

Rick

Correct, it was an S100 based machine. Don't remember what it was, but
it was a single-board machine with simple I/O ports on board. Built-in
ML monitor that allowed hex to be keyed in through the keyboard and you
could 'save' by doing a hex dump with the tape puncher on. Patch the
binaries by splicing tape ....

I only used toggle switches to program once ... that was on a single-step
PROM burner. Glad I missed that particular era of computing.

My guess would be that this won't go well together. The problem is that
TurboBasic requires a bit of low-memory, right above the end of the FMS,
and that looks pretty much like the same area S.A.M. wants to go into.

So long,
     Thomas

I had to use toggle switches to program the boot sequence on a Pr1me mini
and Data General Nova, I believe. I think the Eclipse model didn't require
that.

We had paper tape readers on the PDP-11/70 and maybe the 11/44's. Never
needed to use them, fortunately.

That's a shame. I've got 256KB on my 800XL... any chance either of them
could be convinced to bank back and forth? >:^)

Or maybe I need to just crack out Action! + SAM. Ugh, not that I have time ;)

Atari XF351 disk drive is never released. I wonder if the 8bit computer can
communicate with the SF drive? because both 8bit and SF have the serial
port. So is it possible? Need the communication adapter? like Atarimax's
serial interface for APE.

Thanks!
Jack

The XE series are not easy to remove the RAM chips. Most likely this is
your problem. Especially if they are 'MT' type RAM chips.

I can remove the chips, install sockets, and install the new RAM if you need
some help. There are people on here who can vouch for my work.

Thomas

Yes they are soldered, had fun removing them. Planning on using
sockets. I think there were 2-3 of the chips that ran very hot after
about a minute so I removed them all. None of the other chips ran warm
at all, so either they are good or dead (hoping for good).

After I posted I remembered I have a Commodore 128k RAM cart I was
going to mod for 512K and the chips inside happen to be 16 64K so I am
going to use those.

Hopefully I get around to finishing it this weekend and it works.

If it works what was the model number for the XE version of the floppy

drive, or did everyone use the older XL style drives with it?

Any 8-bit Atari drive will work. The "XE version" is the XF551, which is
double sided double density (360k), and some people used custom ROMs to
convert it for a 3.5-inch mechanism with 720k capacity.

Had to order some sockets for the ram, funny how cheap stuff is from
HongKong and Thailand (shipped even). Will know if this works in a
couple of weeks when they get here.

Which of the Atari floppy drivers were the most reliable? Most of my
experience has been with C64 machines and drives having never owned an
Atari 8bit (did have a friend who had one back in highschool). I have
one of the Ultimas (2?) that had C64 files on one side and Atari on
the other that I want to play.

Thanks for all the help.

Potentially granting that, how was the sound chip compared to the SID?

The Apple had nothing but a speaker toggle, though the AY-8910=20
daughtercards are nice.

The XF551 was known to have weak connections between the circuit board
and the SIO sockets. It was recommended to keep the cables plugged in
and unplug the other end. Other than that I think most drives were
pretty reliable, but I only had a 1050 and an XF551.

Dear Bill, to Log on with my 800xl, I need my Internet Provider to support 2400 Baud as I cant do much more with my 800xl! Can you E-Mail either IceT or FlickerTerm80 or both to me as an attached file?

On Sat, 11 Apr 2009, Bill Kendrick wrote:

I use a UNIX shell and if you look at the Header of this message you'll see I'm using ALPINE, a newer version of PINE! I use it for both UseNet & E-Mail!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

http://i.gizmodo.com/5218400/old-school-computer-band-rocks-bohemian-rhapsody-
poorly

"I can't think of a more old school, geeky tribute to Queen than a
band comprised of an Atari 800XL, 8-inch floppy disk, 3.5-in hard
drive and HP Scanjet 3C. If only it sounded better."

It really does sound pretty terrible, but I applaud the effort.
The 800XL as the organ sounds best, IMO. ;)

What's the length limitation on extending the cartridge port?

There was - I've not checked it in a long time and when I did just now,
I got a page not found error, with an additional note that the Atari-users
map module was unavailable.

You can see it here:

http://www.atari-users.net/index.php?module=Atari-Users%20Map

I've got one in my basement with about 7 undeveloped pictures on it... I
wonder if Kodak can still develop them?

Unequivocally, no. I used to work for Kodak's film processing
subsidiaary, Qualex. Film production for Disk format ceased in the 2nd
half of the 90's, just before I left in '98, Disk and 126 cartridges
were changed to 3-day service and all sent to one plant, and around 2k1
to 2k2, all services for disk ceased. And even if you could get it
processed, the color layers of unprocessed film rot unevenly, so the
colors would be terrible after this many years, if any image even
survived.

> Unequivocally, no.

OK, it turns out, not so no. There are a hand full of places that do Disk, but I would expect the price to be high. Try Blue Moon Camera, Film Rescue or Rapid Photo. Don't have any URLs, but Google can be your friend on these. Again, though, with the age of the film, there is likely to be severe color drift. Combine that with the fact that the printable surface area of the film so small, the picture will resultantly be very grainy (which is why popularity died, when far better 35MM technology created more Instamatic-like 35MM cameras). You'll have to decide if those 7 pics are worth the effort and expense.

FWIW: Just took some old 126 film to Wolf Camera and they sent it out to
a special shop. Took like two weeks to get prints back me thinks. Color
was kind of bad as you mention but then 126 film was never exactly
intended for professional use to begin with. The pictures were ~25 years
old in a camera one of my recently deceased friends owned. I was packing
up stuff to send to his family who are out of state when I came across
the camera. There were pictures of both my friend and his parents that I
was able to send to his family. Really worth it under the circumstances
and thanks for making film that would stand up to this type of storage
and abuse while you were at Eastman.

Rick

Not to hijack the thread, but now that I have Basic XE and Basic XL I
was wondering what would be the best Basic programming environment. I
used Turbobasic a lot, but cut my teeth on Atari Basic.

On another topic, My summer project is to finally learn assembly. I
have Atari Assembler and Mac/65, what are there any other assemblers I
should look at?

(BTW, I would like to run them all from my MyIDE cartridge... :-)

Castle Crisis isn't listed in the FAQ. Great game, it's the first game
we get out when people are coming over.

I know I had this working at one time, but for the life of my I can't
remember how I did it. It was using MyDOS and Ultra High speed for use
with US Doubler drives and APE. Anyone want to refresh my memory?

I don't get the speedup you get with a US dblr
and APE. You set the speed within APE software.
The US Dblr is in a real 1050, and as far as I know,
there isn't a high speed facility to MyDOS with
the dblr. A US dblr will sense SpartaDOS and
do high speed automatically. Also, you format
a floppy in a dblr 1050 in ultraspeed sector skew.
I don't know if MyDOS will work with a dblr
sector skew disk.
Personally, I don't like speedup disk access.
I'm more concerned with error free usage.

Added, thanks!

(I also have the cart, it's indeed a great game!)

TurboBasic is rather convincing, and rather popular in Europe - you get it
for free. Basic XE/XL were proprietary, I never used them a lot - but that
shouldn't mean they're bad.

> On another topic, My summer project is to finally learn assembly. I
> have Atari Assembler and Mac/65, what are there any other assemblers I

I think the Mac/65 is probably the best assembler you can get for the 8-bit.
The Assembler/Editor is rather rusty, there is EASMD, also by OSS, but that's
just the precursor of Mac/65 and not quite as powerful, and there is also
the Syn-Assembler by Synapse. Of all those, I liked the Mac/65 the best. Very
powerful,
very fast, and the cart version has a very good debugger built in that is much
more useful than the simple monitor in the Assembler/Editor or Bug/65.

So long,
     Thomas

Try this one. Read the help files for usage.
Atari800 plus 4.0.exe Installer
http://a800win.atari-area.prv.pl/

Take also the xf25.zip if you can't find your original OS. Or can't dump
the basic rom.
Also inside is an ATR file for booting to dos.

READ the HELP files.

What most people are doing about monitors if they use anything other then a
TV or composite monitor is use some kind of conversion dongle that lets you
use a VGA monitor. The problem for us has been the horizontal scan rate
which is double what the Atari can handle for most RGB monitors.

If you can find an old monitor that can sync down to Atari levels ~NEC
Multisync or Atari ST color monitor maybe, it is still problematic in that
you don't have the right signals to work with. Foggy memory but I think the
GTIA output 4 bits of lum to a 4049 or 4050 that does the summing. Hard to
explain but the data comes out in two pieces. That is, the RED doesn't have
a RED level but it is added on the fly by the GTIA from the summing
circuitry. One lum output for all colors. Anyway, see if you can spot an
800XL schematic on the web and you can see what I mean.

There is a Trident single<?> chip solution. Can't remember the name,
something like Trivideo 5600. Takes composite, S-Video and converts it.

Rick

I use imageman.exe, it works on DOS 2/2.5/MyDOS
single density ATRs.
There's also Schreur's xdir, that will work on
SpartaFTe images also. I haven't used it much,
it extracts files from images, and probably you
can add files as well, don't know.
Once you prepare your imageman compatible
atr, you can further manipulate it in an emulator.

Paul Quirk has created a new web forum for users of
classic computers. Go to http://retro-link.com to see the
opening message or to http://retro-link.com/smf/ to browse.
To sign up, send an e-mail to paul(at)retro-link.com

According to Paul, Retro-link.com will be different. This is

what he says --

"There will be a new site for enthusiasts of retro computers...
It will include other retro computer systems, as demand
warrants. That site will be called retro-link. The domain,
which has been registered, is at retro-link.com. I intend to
have it ready and open to the public this weekend.

The theme will be a mature, friendly, harassment-free
place where people can contribute as much or as little
as they wish. It will be a positive place where people can
post questions that have been asked a hundred times
without being insulted for doing so. It will be less of a
repository of information, and more of a social place to
gather and discuss...

The forum seems to be all-encompassing in its eight
categories -- General, 8-bit Commodores, Amiga, Atari,
Apple, Tandy/TRS-80, Vintage PC, and Others.

Truly,
Robert Bernardo

Is that the one that comes in the form of a Total Commander plug-in? If so,
it's the slickest thing since sliced bread.

Could someone give me a direct link to the program? I don't see where
the page is available in English, and the babel fish doesn't seem to
understand Polish any better than I do.

Thanks,
Trevor

Does anyone have a good layman's explanation of how HIP, TIP and RIP work?
(I understand APAC and ColorView, and kind of understand HIP... it's 80x192 16
grey
and 80x192 9 palette, and that somehow causes the pixels to shift 1/2... interlace
that and you can, kinda, get 160x192 with 30 shades.)

What do TIP and RIP do?

(Am I hallucinating? There IS something called TIP, right? :))

I am looking for the program that verify the sectors and files on the hard
drive... Any idea?

Thanks!
Jack

I confused makeATR with something else. I don't recall where I picked it up,
but the Total Commander plug-in came in an archive named 'atrwcx_1.6.zip'. It
lets you browse the contents of an ATR image from a Norton Commander-like
point and shoot file browser.

Yes That is a great plug-in. I have Total Commander also. Works great for
dumping atr's to a different directory, even large atr (16mg). I started
using TC when I got pissed at the new explorer that came with windows vista.

Just wanted to say thanks to everyone who bought my Atari 8-bit and Atari
ST-Falcon
Computers and related software, hardware, books and mags.

Just about everything was sold and what didn't was donated.

I do not have anything to do with Atari Computers anymore.

The Auction is over, so please do not e-mail about Atari related stuff any
more.

Thanks and best of luck.
Barry

X-Complaints-To: abuse@sonic.net
Xref: g2news1.google.com comp.sys.atari.8bit:897

I've began creating a modern clone of "Dandy" (the ancestor of Gauntlet)
using Simple DirectMedia Layer, an open source library for Linux,
Windows, Mac, BeOS, Amiga and various other systems and platforms.

It's written in C and utilizes a cellular automata map to control the
bad guys, just like Jack Pavelich's original Dandy. (I'm unsure whether
Ed Logg's Gauntlet in the arcade, or Tengen's Gauntlet on the Nintend (NES)
did exactly the same, but anyhow...)

It's pulled in a few concepts from Gauntlet (and gazillions of other
games since), such as different characters you can select from, with
different abilities. (One is very fast but has a weak weapon, another
is very slow but also very strong (high hit points), etc.)

The graphics are horrid, mostly drawn using a trackpad on my laptop,
though some that I whipped together tonight were done using a Wacom pad.

Tonight I added temporary upgrades you can collect (make a slow guy go
faster for a while, for example), initial varied artwork for the
characters (and their projectile weapons), and smooth scrolling.

Now, to make it even more on-topic to c.s.a.8, it probably would not
be an insane endeavor to try and port the game to Action! to run on
an Atari. >:^) But with Dandy already there, why would you bother?

Anyway, it lives here: http://www.newbreedsoftware.com/fop/
And is open source: GNU GPL.

Only source is available, as of this writing, but it should be
compilable on anything SDL and SDL_image compile on.
(See http://www.libsdl.org/ -- think iPhone, Nintendo DS, Wii, Sony PSP,
QNX, Sega Dreamcast, MorphOS, Amiga, GP2X, Pandora, etc...)

Bob Woolley, Atari 1200XL hacker extraordinairre (who also at one time
resurrected the print magazine "Atari Classics") has also offered to
speak at this event, as well as bring some of his hacked 1200XLs for
people to look at.

(He'll also be bringing an 800, 130XE and 1200XL to play games on,
bringing the total number of systems that we'll have, up and running
simultaneously, to 14! Spanning all Atari platforms[*],
from 2600 to Jaguar!)

[*] Well, no Pong, Portfolio palmtop, or IBM PC clones. :)

Try Arc version 5.00 for the straight across the board MS-DOS
equivalent of Atari's Super Arc and Super Unarc. Don't forget to snag
the documents for it - this is original System Enhancement Associates
(SEA) code with the famous Phil Katz curse within. I quote, "If you
fail to abide by the terms of this license, then your conscience will
haunt you for the rest of your life." Not so spooky stuff on the face
of it, but then Katz died a few years later on of self consumption...

http://www.utexas.edu/ftp/microlib/dos/z100/compress/
http://en.wikipedia.org/wiki/Phil_Katz

The file you want (or maybe don't want!! - boogety, boogety) is the
self-extracting arc500.exe and then the documentation on it is
arc5doc.arc.

On my system, I renamed it from arc.exe to arc500.exe so that WinZip
and others will not invoke it by chance. When I need to use it from a
batch file for example I just do:
arc500 a makemea.arc stufftocrunch.exe

And ONLY version 5.00 arc then gets used to make the arc file - after
over ten years of using it, I've never found the real Atari system
unable to uncompress the files made by version 5.00 arc from SEA.
Good stuff from 01/21/86 at 18:12:02.

Mine came preformatted in the package, so I just did a delete all and then
put my images on it.
If your asking about the SD card and not the CF card because the SIO2SD
doesn't use CF cards. I have never heard of an SIO2CF adapter.

My thoughts exactly. The SD card should be in FAT format (what DOS & Win
use). Mine was already formatted when I bought it (or my digital camera
formatted it into FAT format when I first used it?), and I'm able to
access it easily under Linux on my laptop (has a built-in SD reader next
to the headphone jacks :)).

Just make an "atari" folder at the root of the card, put your ATR disk
images (or EXE, XEX, COM executables, which you can also boot directly
into) in there. You can even have subfolders and navigate them using
the SIO2SD's buttons. (I honestly haven't loaded mine with much yet,
I haven't had too much time to play with my Atari 8-bit lately.)

Last-modified: March 10, 2009

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

I can't speak to the legality of publishing the forum discussions, but..

... it sounds like the PDFs are just giant scanned images.

It'd be useful to run them through an OCR (optical character recognition)
tool, to turn them back into text.

It might be something AtariMuseum.com would want.

I used the Commodore monitor cable to hook up to our 32 Inch flat screen TV.
It looked just great. For S-Video you could use the Commodore monitor cable
and a video adapter. Using this setup, I was able to hook the XE upto a PC
monitor with no problems.

I bought this game for my XE and loved it. Great graphics and sound. There is
even some sound clips from the Jaguar game. it was nicely done and well worth
the money I paid for it.

There is one out there. I ran into it a long time ago, but chose one that
works under Windows which is much easier to use.

My mistake, it is a SIO2SD not CF.
I bought a 4GB SD card, but after some reading, I may have to stick with a
2gb or 1gb.
I tried formatting the SD card with the FAT file system, but I still get a
Card Init Error.
Do I need to stick with 1 or 2gb cards ?

Thanks,
Bill

I concur, Tempest Xtreem is pretty fantastic.

I scored 429,000 the other night. Died on the first red board, which I
think was the first board after the second bonus round.

Oops...It appears the forums were on GEnie, not CompuServe - my mistake!

Also, the reason the files are so big is, correctly, because they are images
- the original forums had many lines of header information before each
message, so I chose to print them out in a three-column style, on a
dot-matrix printer, in condensed type. Perfectly readable, and big paper

saving, but not really suitable for OCR (I did try, Acrobat does not do a
very good job of this style...)

I will check up on the couple of suggested locations to post these to.

> What do TIP and RIP do?

HIP was the first mode introduced. It interleaves Graphics 9 and 10
on alternating scanlines.
Due to the way GTIA works, Gr. 10 pixels are shifted one colour clock
to the right (ie half a pixel in that mode).
That can work to advantage - by alternating 2 copies of the picture
with the Gr. 9 and 10 lines swapped you get an "apparent" 160 pixels
across.
You can also simulate more luma levels since you get a kind of
averaging of pixel values, so can perceive intermediate values.
In HIP, you use 8 of the 9 available colour registers and represent
luma values 0,2... etc to 12, 14.

TIP is probably the most advanced use of Graphics 10 pixel-shift, it

also relies on PAL colour averaging between scanlines.
With TIP, you build a 2 displays with a repeating sequence of 4
lines...
Gr.11 (Colour only mode)
Gr. 9 (Luma only mode)
Gr. 11
Gr. 10 (paletted)

The second display is repetition of 11, 10, 11, 9.
So, by flicking between the 2 screens you get the perceived 160 pixels
across from mixing modes 9 and 10. You also have colour averaging
which allows 256 colours on the mode 9 lines and 128 on the mode 10
lines.
PAL colour averaging though does lose some saturation since the mode
9,10 lines are shades of white.

All of these modes rely on DLIs or a screen kernal to change the PRIOR
register on GTIA.

One last reminder! If you're anywhere near the SF Bay Area or

Sacramento, come on out to Davis for our first-ever "Atari Party"!

  http://www.newbreedsoftware.com/atariparty/

This Saturday, March 28th, from 6pm to 9pm. Free, open to the public,
and children are welcome.

Come play on a dozen systems, spanning 2600 through Jaguar, including
8-bit and ST computers, and over 200 games! There'll even be a few
educational displays and guest speakers.

Davis Public Library
315 East 14th St
Davis, CA 95616

HI!

I am floating around the idea of making a TV version of Retrogaming Times Monthly, called Retrogaming Times TV, which would be hosted on YouTube. It would be a central place to post videos on old games for anything (reviews, homemade classic videogame cartoons, interviews, etc). Thought I would mention that this could happen if I can get enough people to submit videos to me. Old video game commercials, interviews, etc would be able to be posted to this new TV effort, just not something that somebody already has made himself and

posted on YouTube (such as a review done recently that already is on-line on YouTube).

I was thinking of including many of the videos on RTTV also in Retrogaming Times Monthly at its website, www.retrogamingtimes.com, therefore giving videos posted on Retrogaming Times TV airtime at both YouTube and the on-line magazine. To those interested in this venture, send me an e-mail at bryan@retrogamingtimes.com. Thought it would be neat to have both print and video outlets for Retrogaming Times Monthly!

"Kind of Like MTV for Retrogamers"

P.S. Spread the word around about this to your friends so that everyone that might be interested knows about this new effort for the on-line magazine.

Sincerely,

Bryan Roppolo

Not to sound like a total crank, but is "Kind of Like MTV for
Retrogamers" supposed to be a -selling point?- I can't think of any
tagline that would inspire me to watch it -less.-

I have seen MTV recently, but I was thinking more along the lines that
MTV and early 80s gaming go pretty much hand in hand as it defines
that part of the decade. Might not have been phrased right, but the
general idea was making a reference to MTV along with early 80s video
games, became popular at the same time period. It's just something I
threw out there as it came to mind with TV and gaming from the 80s.

What you are proposing is a video podcast, target audience being who are
interested in classic gaming, trying to capture the production stylings
and standards popularized in the 80's with the look of vintage MTV
and/or Miami Vice. Fast paced, energetic presentations, brightly
colored sets and wardrobes, big hair, parachute pants and mallrats
hanging in the arcade.

Sounds good. Let us know if it comes to light. I would love it. Thanks.

Hi Byran--

That's a great start. I think it would make more sense to use stikcam
instead of Youtube. This way you can have live episodes as well as
storing recorded ones.

Just adding my 2cents :P

Duuude! You, of all people, I expected to be there! *disappointment*

In other news, Zach Matley, a homebrew Atari 2600 game developer who
happens to be out in the Sac. area, found out about the event, and is
bringing some more gear and games, and will be doing a short presentation!

Thats right folks, for the month of April, The DarkForce!
BBS is giving away a free copy of "Tempest Extreme". Don't
miss out on a chance to own this great new 8bit game. The
reviews are in and Tempest Extreme is a winner!

But...you can't win if you don't call... :)

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

Hello:

If you were stranded on a desert island, with your Atari, and be able
to play them, what 5 games would you have to play, maybe before you
were picked up?
(The MULE folks please dont apply)

Gauntlet?
Zaxxon?
PacMan?

Dare go on ?
JIM

Atartris, because I'd need a Tetris fix now and then.
Star Raiders, because it's one of my all-time favorites.
Pac-Man's on the XL is a pretty good translation, so I'd agree with that.
And 'yes' to Gauntlet, if you're talking the space shooter. :)

Man, what would #5 be for me... hrm? BASIC or Action! ;) Esp. if I could bring some books (De Re, Compute!s, etc.)

Star Raiders
Pole Position
Star Wars
Archon
Alternate Reality the dungeon

This really is quite hard. There are so many good games for the old girl.

Mark

> Dare go on ?
> JIM

Since you give Mule a free pass.
I would go one from each group with the following choices as good'nuff
RPG
AR City, AR Dungeon, Ultima III or Ultima IV
Board game
Sargon II, Sargon III, Chess Master<?>. The other games like checkers were

just too strong and Othello too boring for me.
Shoot'em
River Raid, Gorf, Galaxians, Star Raiders
Maze chase
Zenji

By no means an exhaustive list, didn't even get to side scrollers or
platforms.

In no particular order:

Ultima 3

Archon
Realm of Impossibility
Alternate Reality
Hitchhikers Guide To The Galaxy

Hello:

I am glad this post got some creative minds going, and the colorful
titles they are. I think I would keep Star Raiders, and PolePosition
and Archon would be in my top five, With Zaxxon there and one more
fill in, and do you have any RPG's for us old folks. I am hard on
joysticks and if I get to this island I might have to opt for a few
joysticks before I go for another game.

Hello:

I can imagine the noise coming from this deserted island, the locals
would think there is a war going on! and by any means you would have
so many dug out canoe's around the island, it would come out as a hot
spot for any one to come. I know this dont apply but as I sit here and
go a few steps further. I have to laugh in what the noises would
be ? ?

Alternate Reality, mate. There is none finer on ANY machine EVER. There
are 2 versions, The Dungeon and The City. A third was supposed to be
created but never made it. It is an incredible piece of programming.

Mark

Well, to attempt that, you would need a Kodak Disk camera, but the film
as abandoned back in the 90's, so that would not be possible.

jt

A Polaroid instant camera would be even better. :)

Are there any easy-to-use tools to convert images to the different
Atari 8-bit formats (APAC, ColorView, HIP, TIP or even just Micropainter/Koaa)
that one can use on the command-line in Linux?

e.g. do something like:

  jpeg2apac my_giant_picture.jpg PICTURE.APC

I'd even be happy with something you can chain along using pipes,
or cobble together, step-by-step in a shell script. e.g.:

```
  djpeg my_giant_picture.jpg | pnmscale -xysize 320x192 | ... \
     | pnmtoapac > PICTURE.APC

Thx!

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they

are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

BIOS has posted my video of the March 28 Atari Party
2009, which was held in Davis, California. In the video,
you will see much gaming and the presentations from
Paul Cubbage (APX magazine) and Bill Kendrick (Atari
8-bit computer video modes). Go to

http://blip.tv/file/1942452

Truly,
Robert Bernardo

:-) Not supposed to mention MULE for some reason :-)

Mine is
Star Raiders
Alternate Reality : The City (If only to listen to title tune, which is
absolute some of the best computer music I heard)
Wizards Crown (Since I never got around to complete it ... if have time
soon, I think I want to give it another try)
Starfleet I
Bounty Bob Strikes Back

But there's a lot of games I'd miss :-/ Rescue on Fractalus, Ballblazer,
Pole Position ... oh a lot really

I want to start a collection of classic computers and
consoles and I want to get the best games for the
ATARI 800.

Which are the must-have titles for the ATARI 800?

Must haves :
Star Raiders, MULE, Dropzone, Bounty Bob Strikes Back, Miner 2049'er, Rescue on Fractalus, Ballblazer, Koronis Rift, The Eidolon, Starfleet I, Pole Position, Datasoft version of Pac-Man (have the interludes) ... Mostly all Atari carts were very good ...

Hmmm ... Wizards Crown, Ultima series, Alternate Reality, Mr. Robot and his Robot Factory, Cavernia, The Last Starfighter/Star Raiders II ... Hmmm ... difficult to remember, but probably more pop up soon :-)

It's a lovely computer

1st - Star Raiders, Why I bought my 1st Atari Computer, a 600xl!

2nd - Star Trek by Sega is very Good. I love it when I Destroy Nomad! I'm
       missing the Manual, Box and the Joystick overlay!

I had Star Fleet 1 for my 800xl but I prefer it on my ST! I can completely

control it on my ST's Numeric KeyPad! I wrote a review years ago! I'm good!

3rd - Silent Service is the 1st Commercial Disk Game I bought and my 1st Disk Drive was a Brand New In the Box 1050! Before Silent Service I played Submarine Commander on Cartridge by EMI Thorne Video from Kay Bee Toy & Hobby! My 3rd choice is Silent Service!

BTW, I love Simulators especially by MicroProse like Silent Service!

4th - I Love most LucasFilm Games like Eidolon, Koronis Rift, BallBlazer & Rescue on Fractulus! I love Games that use Fractal Math Like Silent Service & Rescue on Fractalus! My 4th Choice is Rescue on Fractalus!

5th - I Love many XE Game Cartridges, especially because Atari repackaged good games some formally on Disk! My 5th Choice is Star Raiders II!

6th - I know were only picking 5 but my 6th is Final Legacy by Atari! The Box says it's 3 Games in 1 and it's a simple way to Relax!

7th - One of my favourite Movies is War Games with Matthew Broderick and Ally Sheedy! I still have my VHS copy! I dont have it for the Atari by Coleco but I have EMI Thorne Video's release of Computer War. I love that the Tic Tac Toe is worked in!My 7th Game is Computer War!

I prefer Simple Games to help me relax! The more complicated work the more needed simplicity of play! Paraphrased from Captain Kirk on the Pleasure Planet on Shore Leave! I prefer an older familiar game over a new game to keep it simple, not learn a complicated new game with a big, thick manual! My 1st game is Star Raiders! I loved reading the Manual mainly because it spun a story which helped me get into the Fantasy of the story & prepared me so I could Play! "Do you want to play a game?" Quoted from War Games!

You might want to specify a little more the type of
games.
Graphics chaser, role playing, board, shootem
strategy, multi-player.

Star Raiders
Donkey Kong
Ms Pac Man

Donkey Kong jr
Shamus
Blue Max
MULE
Zybex
Rainbow Walker
Krazy Shootout
Pac Man
Pengo
Joust
Defender
Spelunker
Jumpman
Jumpman Jr
Miner 2049er
Caverns of Mars
Galaxian
Rescue on Fractalus (aka Behind Jaggi Lines)
Ball Blazer
Alternate Reality
Dig Dug
Ultima I, II
Missle Command
Gateway to Apshai
Eastern Front
Montezumas Revenge
Quasimodo
Bruce Lee
Fort Apocalpse
All the Infocom games (Zork, Hitchhikers, etc..)
Archon
Arkanoid
Gyruss

I think that should pretty much cover it... but there are even more
for example almost any Synapse game is worth trying. I suggest you
get an emulator or a SIO to PC if you use a real xl/xe and try them
all to see what you like.

Or an SIO2SD. :)

Personally, I'm also enjoying games on carts. (1) Nice to be legit
(vs. grabbing a cracked copy off an FTP site), (2) Instant load times,
no need for floppy drive or even SIO2SD. (Not the most 2-year-old-toddler
friendly devicde ;))

Hello:

I have every variation of MYDOS and have been hooked on MYDOS 4.5 for
ages. I am not a power user, but still enjoy finding my collection of
DOS that is out there,(for example DOS 1.0, TOP-DOS, MACH-DOS and
MYDOS)
I do have FORTH, KYAN PASCAL, but love to see what "C" can do on the
Atari, but is there one out there?
Curious on your favorite DOS ?

JIM

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra
Computers! Occupying a unique niche in the Atari World! Most Atari Dealers
sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods
at a competitive price, I also sell used Atari Goods you wont find at Swap
Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those
remaining anonymous! I test Goods before I sell them. Not only can I sell
you some Great New stuff! I can also sell you hard to find 2nd Hand Goods,
because I'm the guy people goto to give Ataris a New Home! Saving Orphaned
Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your
order goes out the same day. Customers love the speedy service! I have
lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and
Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

Most UK DVD players will play NTSC fine. What they output depends though, could be NTSC, could be psuedo-PAL so it's down to whatever your TV can handle but again, most UK ones should be fine as they are nearly all multi standard.

I just wanted to point out that the latest FAQ version contains a very
large amount of new or newly revised info. I've put a bunch of time into
it the last couple months. The list of updates since last time is at the
top as usual.

Any feedback is appreciated as always!

974!

I had a request from someone for a certain game, and went to the /
newstuff page and its last update was from 2005. Business must be
booming to miss an update like that one.

Don't mean to lurk. I do have a neat story. I bought a common lot of
Genesis games, and the store sticker was from a store, now closed, in
Dhahran, Saudi Arabia. I had been stationed there in 97 and to see
these labels from before the Gulf War was a real trip. The previous
owner's father was an employee over there and hosted soldiers to give
them a break. He has a bathroom door that he had all the guys sign,
and on it Tim McVeigh signed. All I could say was wow.

Had to share, back to lurking.

Nathan

Not surprised, since his ad campaign seems to be solely dependent on
spamming newsgroups, and anyone of regularity around here knows how to
use filters. I haven't seen an ad of his in over a year and a half.

I'm putting together a big Atari Party in Davis, Calif. next month
(http://www.newbreedsoftware.com/atariparty/).

Bob Wooley is hopefully coming, and can hopefully supply an Atari 800
for some M.U.L.E. and Dandy fun. I'll be booting off of an SIO2SD,
and it's trivial to find a bootleg copy of M.U.L.E., but obviously I'd
like to be as legit as possible.

I was hoping B&C had a copy of M.U.L.E., but I don't see it in their
listings online. (I've asked, to double-check.) I also found nothing but
Nintendo NES cartrridges on ebay.

Does anyone have a copy they'd be willing to sell (or donate!?!?!) so I can
keep everything 'above board' here at my event?

Thanks,

--

Been awhile since I've went thru my 8-bit game software, but I may have
this,

What does, M.U.L.E. stand for or is it the actual name of the game, and what company/name made the game and about what year?

A brief description of the game would also be helpful.

When's the event? I have the original boxed set that I could lend, but I'd have to mail it from Utah.

March 28th. I just want to have a copy around so I'm 'legit'. :)
So borrowing should be fine. (Though I'd love to have my own copy, just
to have!)

M.U.L.E. stands for "Multiple Use Labor Element" (Wikipedia tells me :)),
but the name of the game is simply "M.U.L.E." It was published by
Electronic Arts (developed by Ozark Software).

The Wikipedia entry for it has a picture of the box (disk sleeve) art:

  http://en.wikipedia.org/wiki/M.U.L.E.

Thx!

Hi, I have a problem with my XE game system. Maybe one of you can tell me what the matter is. Sometimes when I power on my XEGS, it will just not work, e.g: will go to a blank blue screen with a buzzing noise and a cursor, sometimes a red screen with a cursor, sometimnes just a blank blue screen. When it boots to these screens, it will be unresponsive most of the time, however sometimes when I get the blue screen with a buzzing noise, basic will boot after ~3-5 seconds, and everything will work as normal. All I have to do to fix it is hit restart and it will boot to basic or to cartridge like normal. Rarely I will have to hit restart more then once, but it will always eventually work. Also, holding select while booting is

supposed to bring me to missile command, but many times it will just
boot to basic as if I just booted normally. I'm willing to live with
it if it's unfixable, I'm just hoping it won't effect the operation of
any of the new hardware I ordered. I ordered an SIO-2-PC USB edition,
and an internal MyIDE. Any ideas or comments?

The "buzzing + cursor" is the OS looking for a floppy disk drive,
and not finding one. If you don't want to wait the 3-5 seconds,
hit [Break] key a few times to hurry it along.

As for the unusable red/blue screens, not sure what's up there.
Might be a ROM or RAM chip failure. Others here on c.s.a.8 would
probably be better able to help.

Good luck!

Thanks for the help Bill, I guess it's less fubar then I thought
before. Can't wait for my SIO-2-PC and my MyIDE. Still looking for
any ideas as to why it intermittently if any one else has any ideas.
If it is a rom/ram chip failure, will any of the interfaces I

purchased be effected by that to the point where I will not be able to
use them. Also, how can I identify the problem

              Welcome to the comp.sys.atari.8bit newsgroup!

                  Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

I don't know why, but I suspect your ROM chip.
Rick Cortese is a hardware person.
What was neat about the 800 and some 800XL is
that the chips are socketed. In that case you can swap
out known good chips and try find the bad one.
Of course, it means you'd have to have a working,
socketed mate to your original.
Since it is intermittent, it may be the power supply,
it having to come up to level, that is something you
could try if you have a spare. So, buy a 800XL.

I did the self test and it passed every test with flying colors.
Also, I think the problem was the mainboard touching the RF shielding,
because I opened it to look for obvious damage and found 2 of the pegs
that keep the mainboard from touching the shielding broken off. I
superglued them back in place, and now it seems to work beautifully.
Thanks for all your help guys.

The ATARI 800 is a piece of crap with only 4 colors,
4 monochrome sprites and a lousy soundchip.

The C64 is much better!

Discuss!

Thanks Bill. I really enjoyed those.

Pretty impressive for 4 colours.

Mark
